Contents

Foreword *page* xvii
Preface xix

1 Introduction 1
References and Additional Reading 6

Part I Wave Optics

2 Electromagnetic Waves 9
2.1 Macroscopic Maxwell's Equations 9
2.2 Wave Equations 10
2.3 Boundary Conditions 11
2.4 Energy Conservation 12
References and Additional Reading 14

3 Geometrical Optics 15
3.1 Plane Waves 15
3.2 Eikonal Equation 16
3.3 Ray Equation 17
3.4 Transport of Intensity 19
References and Additional Reading 20

4 Waves at Interfaces 21
4.1 Geometrical Theory of Refraction 21
4.2 Wave Theory of Reflection and Transmission 22
4.3 Total Internal Reflection 24
References and Additional Reading 26

5 Green's Functions and Integral Representations 27
5.1 Kirchhoff Integral Formula 27
5.2 The Green's Function in an Infinite Medium 29
5.3 Far-Field Radiation Pattern 31
References and Additional Reading 32

6 Plane-Wave Expansions 33
6.1 Plane-Wave Modes 33
6.2 Weyl Formula 34
6.3 Beam-Like Fields 35
References and Additional Reading 37

7 Diffraction 38
7.1 Rayleigh–Sommerfeld Formulas 38
7.2 Fresnel and Fraunhofer Diffraction 41
7.3 Circular Aperture 42
References and Additional Reading 45

8 Coherence Theory: Basic Concepts 46
8.1 Analytic Signal Representation 46
8.2 Random Fields and Coherence Functions 48
8.3 Interferometry 50
References and Additional Reading 53

9 Coherence Theory: Propagation of Correlations 54
9.1 Wolf Equations 54
9.2 van Cittert–Zernike Theorem 56
9.3 Coherent Mode Representation 58
References and Additional Reading 59
Exercises 59

Part II Scattering of Waves

10 Scattering Theory 65
10.1 Integral Equations 65
10.2 Born Series and Multiple Scattering 66
10.3 Scattering Amplitude and Cross Sections 67
10.4 *T*-matrix 70
References and Additional Reading 71

11 Optical Theorem 72
11.1 Extinguished Power 72
11.2 Generalized Optical Theorem 73
References and Additional Reading 74

12 Scattering in Model Systems 76
12.1 Point Scatterer 76
12.2 Collection of Point Scatterers 79
12.3 Scattering from Spheres of Arbitrary Size 79
References and Additional Reading 84

13 Renormalized Perturbation Theory 85
13.1 Rytov Series 85
13.2 Geometrical Optics and the Radon Transform 86
References and Additional Reading 88

14 Wave Reciprocity 89
14.1 Fundamental Relation 89
14.2 Local Form of the Reciprocity Theorem 90
14.3 Reciprocity of the Green's Function 90
14.4 Reciprocity of the Scattering Matrix 91
References and Additional Reading 94
Exercises 94

Part III Wave Transport

15 Multiple Scattering: Average Field 99
15.1 Gaussian Model 99
15.2 Average Field 100
15.3 Weak Scattering and Effective Medium 103
15.4 General Models of Disorder 105
References and Additional Reading 106

16 Multiple Scattering: Field Correlations and Radiative Transport 108
16.1 Field Correlations 108
16.2 Wigner Transform 110
16.3 Radiative Transport 113
16.4 General Models of Disorder 115
16.5 Ward Identity 116
References and Additional Reading 118

17 Radiative Transport: Multiscale Theory 119
17.1 High-Frequency Asymptotics 119
17.2 Multiscale Expansion 121
References and Additional Reading 124

18 Discrete Scatterers and Spatial Correlations 125
18.1 T-matrix of a Discrete Set of Scatterers 125
18.2 Irreducible Vertex 127
18.3 Independent Scattering 129
18.4 Structure Factor 130
18.5 Correlations 131
18.6 Transport Mean Free Path 132
References and Additional Reading 134

19 Time-Dependent Radiative Transport and Energy Velocity 135
19.1 Two-Frequency Bethe–Salpeter Equation 135
19.2 Time-Dependent Radiative Transport Equation 138
19.3 Nonresonant Scattering 140
19.4 Resonant Scattering 140
19.5 Energy Velocity 141
References and Additional Reading 143
Exercises 143

Part IV Radiative Transport and Diffusion

20 Radiative Transport: Boundary Conditions and Integral Representations 147
20.1 Time-Independent Radiative Transport 147
20.2 Boundary Conditions and Uniqueness 148
20.3 Green's Functions and Integral Representations 150
20.4 Reciprocity 151
References and Additional Reading 152

21 Elementary Solutions of the Radiative Transport Equation 153
21.1 Ballistic Propagation 153
21.2 Collision Expansion 154
21.3 Isotropic Scattering 156
References and Additional Reading 158

22 Problems with Planar and Azimuthal Symmetry 160
22.1 Singular Eigenfunctions 160

22.2 Green's Function 164
22.3 Diffusion Approximation 165
References and Additional Reading 166

23 Scattering Theory for the Radiative Transport Equation 167
23.1 Integral Equations 167
23.2 Point Absorbers 169
References and Additional Reading 171

24 Diffusion Approximation 172
24.1 Angular Moments 172
24.2 Asymptotic Analysis 175
24.3 Bethe–Salpeter to Diffusion 176
References and Additional Reading 177

25 Diffuse Light 179
25.1 Boundary Conditions 179
25.2 Homogeneous Media 181
25.3 Plane-Wave Expansions 183
25.4 Half-Space Geometry 183
25.5 Slab Geometry 184
25.6 Time-Dependent Diffusion 186
References and Additional Reading 189

26 Diffuse Optics 190
26.1 Diffuse Waves 190
26.2 Wave Properties 191
26.3 Interference 191
26.4 Refraction 192
26.5 Diffraction 195
References and Additional Reading 197

27 Scattering of Diffuse Waves 198
27.1 Integral Equations 198
27.2 Small Inhomogeneities 200
27.3 Extinction Theorem 202
27.4 Surface Integral Equations 204
References and Additional Reading 206
Exercises 207

Part V Speckle and Interference Phenomena

28 Intensity Statistics 213
28.1 Fully Developed Speckle 214
28.2 Amplitude Distribution Function 214
28.3 Intensity Distribution Function 216
28.4 Speckle Contrast 216
28.5 Intensity Statistics of Unpolarized Electromagnetic Waves 216
References and Additional Reading 217

29 Some Properties of Rayleigh Statistics 218
29.1 High-Order Moments of the Intensity 218
29.2 Field and Intensity Correlations 219
29.2.1 Factorization of the Intensity Correlation Function 219
29.2.2 Diagrammatic Representation 220
29.3 Diagrammatic View of Rayleigh Statistics 221
References and Additional Reading 222

30 Bulk Speckle Correlations 223
30.1 Model of Disorder 223
30.2 Field Correlation Function in the Ladder Approximation 223
30.3 Intensity Correlation Function 225
References and Additional Reading 225

31 Two-Frequency Speckle Correlations 227
31.1 Two-Frequency Bethe–Salpeter Equation 227
31.2 Two-Frequency Ladder Propagator 228
31.3 Field Correlation Function in an Infinite Medium 229
References and Additional Reading 230

32 Amplitude and Intensity Propagators for Multiply-Scattered Fields 231
32.1 Amplitude Propagator 231
32.1.1 The Scattering Sequences Picture 232
32.1.2 Rigorous Definition of a Scattering Sequence 232
32.2 Correlation Function of the Amplitude Propagator 234
32.3 Correlation Function in an Infinite Medium 234
32.4 Intensity Propagator 236
References and Additional Reading 237

33 Far-Field Angular Speckle Correlations 238
33.1 Angular Correlation Function 238
33.2 Field Angular Correlation Function 239
33.3 Intensity Propagator in the Diffusion Approximation 241
33.4 Intensity Correlation Function and Memory Effect 241
33.5 Size of a Speckle Spot 242
33.6 Number of Transmission Modes 243
References and Additional Reading 244

34 Coherent Backscattering 245
34.1 Reflected Far-Field 245
34.2 Reflected Intensity 246
34.3 Reciprocity of the Amplitude Propagator 247
34.4 Coherent Backscattering Enhancement 248
34.5 Coherent Backscattering Cone and Angular Width 249
References and Additional Reading 251

35 Dynamic Light Scattering 252
35.1 Single Scattering Regime 252
35.2 Measured Signal and Siegert Relation 254
35.3 Multiple-Scattering Regime and Diffusing-Wave Spectroscopy 255
References and Additional Reading 258
Exercises 259

Part VI Electromagnetic Waves and Near-Field Scattering

36 Vector Waves 265
36.1 Vector Wave Equation 265
36.2 Energy Conservation 266
36.3 Reflection and Transmission of Electromagnetic Waves 267
References and Additional Reading 269

37 Electromagnetic Green's Functions 270
37.1 Tensor Green's Function 270
37.2 Far-Field and Near-Field Asymptotics 272
37.3 Far-Field Radiated Power 273
37.4 Plane-Wave Expansion 273
37.5 Transverse and Longitudinal Green's Function 275

37.6 Half-Space Green's Function 276
References and Additional Reading 278

38 Electric Dipole Radiation 279
38.1 Far-Field, Near-Field and Quasi-static Limit 279
38.2 Radiated Power 280
38.3 Local Density of States 281
38.4 Local Density of States and Dipole Radiation 283
38.5 A Simple Classical to Quantum Correspondence 284
38.6 Purcell Factor 284
38.7 Cross Density of States 286
References and Additional Reading 288

39 Scattering of Electromagnetic Waves 290
39.1 Integral Equations 290
39.2 Scattering Amplitude and Cross Sections 291
39.3 Born Approximation and Rayleigh–Gans Scattering 292
References and Additional Reading 294

40 Electromagnetic Reciprocity and the Optical Theorem 296
40.1 Lorentz Reciprocity Relation 296
40.2 Consequences of the Reciprocity Theorem 297
40.3 Conservation of Energy in a Scattering Problem 298
40.4 Optical Theorem for Electromagnetic Waves 299
40.5 Integral Theorems 300
References and Additional Reading 302

41 Electromagnetic Scattering by Subwavelength Particles 303
41.1 Polarizability 303
41.2 Energy Conservation 305
41.3 Rayleigh and Resonant Scattering 306
41.4 Near-Field Scattering 307
41.5 Near-Field Local Density of States 308
41.6 Discussion 309
References and Additional Reading 311

42 Multiple Scattering of Electromagnetic Waves: Average Field 313
42.1 Model of Disorder 313
42.2 Average Green's Function 314
42.3 Self-Energy and the Effective Medium 314
References and Additional Reading 317

43 Multiple Scattering of Electromagnetic Waves: Radiative Transport 319
43.1 Bethe–Salpeter Equation 319
43.2 Radiative Transport 321
43.3 Diffusion Approximation and Depolarization 325
References and Additional Reading 328

44 Bulk Electromagnetic Speckle Correlations 330
44.1 Intensity Correlation Function 330
44.2 Field Correlation Function 332
44.3 Degree of Spatial Coherence 333
References and Additional Reading 334

45 Near-Field Speckle Correlations 335
45.1 Field Correlation Function in a Semi-Infinite Geometry 335
45.2 Far-Field Regime 338
45.3 Near-Field Regime 339
45.4 Extreme Near-Field 340
References and Additional Reading 341

46 Speckle Correlations Produced by a Point Source 342
46.1 Angular Intensity Correlation Function 342
46.2 Speckle Correlations and Fluctuations of the Local Density of States 343
46.3 Single Scattering 345
References and Additional Reading 347
Exercises 348
