## Part I. Genetic Technology

### 1. Practical Molecular Taxonomy of Fungi

*David M. Geiser*

1. Introduction	3
2. Identifying a Fungus to Species—What does it Mean?	3
2.1. Useful Species Definitions	3
2.2. Genealogical Concordance as a Means to Recognize Fungal Species	4
2.3. Molecular Taxonomy in Practice	6
3. How do I Identify an Unknown Fungus?	6
3.1. The Molecular Toolbox	7
3.1.1. DNA Sequence Tools	7
3.1.2. Genotyping Methods: Comparing and Identifying Isolates within a Species	9
3.2. Using the Toolbox	11
3.2.1. Tools for Identifying any Fungus	11
3.2.2. Tools for Identifying Fungi in a Particular Taxonomic Group of Intensive Study	12
4. What is Next?	12
References	13

### 2. Genomics of Filamentous Fungi

*Ulrich Schulte*

1. Introduction	15
2. Genomic Projects Focusing on Fungi	16
3. Genome Structure	18
4. Gene Identification and Annotation	19
5. Gene Complement of a Filamentous Fungus	21
6. Novel Aspects of Fungal Biology	26
7. Summary	27
References	27

### 3. A Molecular Tool Kit for Fungal Biotechnology

*John E. Hamer*

1. Introduction	31
2. Vectors and Transformation	32

3. Gene Cloning Tools for Genomic Approaches .....	32
4. Fungal Transposons as Tools .....	33
5. Tools for Identifying Essential Genes .....	34
5.1. Generating Conditional Lethal Mutants .....	34
5.2. Inference .....	34
5.3. Using Controllable Promoters .....	34
5.4. Post-Transcriptional Gene Silencing (PTGS) .....	35
6. Genome-Based Tools .....	35
6.1. Genome-Wide Insertional Mutagenesis .....	36
6.2. Genome-Shuffling .....	36
7. Summary .....	37
References .....	37

#### 4. Transformation Mediated by *Agrobacterium tumefaciens*

*Paul J. J. Hooykaas*

1. Introduction .....	41
2. <i>Agrobacterium</i> .....	42
3. Host Range .....	44
4. T-DNA Transfer Resembles Bacterial Conjugation .....	44
5. Accessory Functions Enabling Trans-Kingdom DNA Transfer .....	49
6. Protein Translocation from <i>Agrobacterium</i> into Host Cells .....	50
7. T-DNA Integration .....	51
8. <i>Agrobacterium</i> -Based Vector Systems .....	52
9. Transformation of Yeasts and Filamentous Fungi .....	54
10. Concluding Remarks .....	57
References .....	58

## Part II. Special (Secondary) Metabolism

#### 5. Fungal Polyketide Synthases in the Information Age

*Russell J. Cox and Frank Glod*

1. Introduction .....	69
1.1. Secondary Metabolites .....	69
1.2. Polyketides .....	71
1.3. Types of Polyketide Synthase .....	72
2. Non-Fungal PKS .....	73
3. Fungal PKS .....	75
3.1. 6-Methylsalicylic Acid Synthase .....	76
3.2. Fungal PKS Involved in Biosynthesis of Conidial Pigment and Melanin .....	77
3.3. Fungal Polyketide Mycotoxins—Norsolorinic Acid Synthase (NAS) .....	78
3.4. Polyketide Synthase in T-Toxin Production .....	79
3.5. Polyketide Synthase in Fumonisin Production .....	79
3.6. Lovastatin Synthases .....	80
4. Novel Methods for Accessing PKS Genes .....	81
4.1. Problems Associated with Cloning Fungal PKS Genes .....	81

4.2. Early Efforts to Develop Fungal PKS Probes .....	82
4.3. Assessing Biosynthetic Potential .....	85
4.3.1. Prokaryotes .....	85
4.3.2. Lichens .....	85
4.3.3. Insect and Nematode Associated Fungi .....	86
4.3.4. Endophytic Fungi .....	88
4.4. Biosynthetically Informed Approaches for Accessing Fungal PKS Genes .....	88
4.4.1. KS-Specific Primers .....	88
4.4.2. KR-Specific Primers .....	90
4.4.3. CmeT-Specific Primers .....	90
4.4.4. Lessons and Outlook .....	92
5. The Genomic Era .....	92
References .....	93

## 6. More Functions for Multifunctional Polyketide Synthases

*Isao Fujii, Akira Watanabe, and Yutaka Ebizuka*

1. Introduction .....	97
2. Architecture and Functions of Fungal Polyketide Synthases .....	100
2.1. MSAS/OAS Polyketide Synthases .....	100
2.2. Polyketide Synthases for Aromatic Multi-Ring Products (AR-PKSs) .....	100
2.2.1. Pentaketide 1,3,6,8-Tetrahydroxynaphthalene Synthases .....	101
2.2.2. Heptaketide Naphthopyrone Synthases .....	102
2.2.3. PKSs Involved in Aflatoxin Biosynthesis .....	103
2.3. Polyketide Synthases for Reduced Products (RD-PKSs) .....	103
2.3.1. T-toxin PKS .....	104
2.3.2. PKSs Involved in Lovastatin Biosynthesis .....	105
2.3.3. Fumonisin PKS .....	105
2.3.4. RD-PKS from <i>Alternaria solani</i> .....	106
3. More Functions for Fungal Polyketide Synthases .....	106
3.1. Claisen Cyclase Domain in AR-PKSs .....	107
3.2. More Functions for AR-PKSs .....	110
3.2.1. Starter Units .....	110
3.2.2. N-Termini .....	111
3.2.3. Interdomain Regions .....	111
3.2.4. ACP Domains .....	111
3.3. C-Methyltransferase Domains in RD-PKSs .....	113
3.4. PSED (Peptide Synthetase Elongation Domain)-Like Domains in RD-PKSs .....	114
3.5. "Diels-Alderase" in RD-PKSs .....	115
4. Concluding Remarks .....	118
Acknowledgments .....	120
References .....	120

## 7. Peptide Synthesis Without Ribosomes

*Jonathan D. Walton, Daniel G. Panaccione, and Heather E. Hallen*

1. Introduction .....	127
2. Overview of Non-Ribosomal Peptide Synthetases .....	129
3. The "Non-Ribosomal Code" for Fungal NRP Synthetases .....	132

4. Parsing Fungal NRP Synthetases .....	136
4.1. Guideline 1 .....	136
4.2. Guideline 2 .....	137
4.3. Guideline 3 .....	137
5. Strategies to Identify NRP Synthetases and Genes .....	138
6. Tailoring Enzymes and Auxiliary Domains .....	139
6.1. N-Methylation .....	139
6.2. Epimerization .....	140
6.3. Other Tailoring Reactions of Fungal NRP Synthetases .....	140
6.4. Pantetheinylation .....	141
7. Regulation .....	142
8. Status of Research on Selected Fungal Systems .....	143
8.1. AM-Toxin .....	143
8.2. Cyclosporin .....	144
8.3. Destruxins .....	145
8.4. Enniatins .....	145
8.5. Ergopeptines .....	146
8.6. HC-Toxin .....	148
8.7. Penicillin and Cephalosporin .....	149
8.8. Peptaibols .....	150
9. Evolution of NRPs and NRP Synthetases .....	151
9.1. Clustering .....	151
9.2. Evolution of Secondary Metabolite Pathways .....	152
10. NRP Synthetases in the Genomics Age .....	154
Acknowledgments .....	154
References .....	155

## 8. Isoprenoids: Gene Clusters and Chemical Puzzles

*D. Barry Scott, Geoffrey B. Jameson, and Emily J. Parker*

1. Introduction .....	163
2. Sesquiterpenes .....	165
2.1. Trichothecenes .....	165
2.1.1. Chemical Diversity .....	165
2.1.2. Gene Clusters .....	166
2.1.3. Biosynthesis of T2-Toxin .....	167
2.1.4. Regulation .....	172
2.2. Aristolochenes .....	173
3. Diterpenes .....	174
3.1. Gibberellins .....	174
3.1.1. Chemical Diversity .....	174
3.1.2. Gene Cluster .....	175
3.1.3. Biosynthesis of GA <sub>3</sub> .....	175
3.1.4. Regulation .....	179
3.2. Indole-Diterpenes .....	179
3.2.1. Chemical Diversity .....	180
3.2.2. Gene Cluster .....	180
4. Tetraterpenes .....	184
4.1. Carotenoids .....	184
4.1.1. Chemical Diversity .....	185
4.1.2. Biosynthetic Pathway .....	185

5. Proteins of Isoprenoid Biosynthetic Pathways .....	189
5.1. Initiation of Prenyl Transfer .....	189
5.2. Prenyl Transferase Structure and Classification .....	190
5.3. Trichodiene Synthase .....	191
5.4. Aristolochene Synthase .....	192
6. Final Remarks .....	192
Acknowledgments .....	193
References .....	193

## Part III. Enzymes and Green Chemistry

### 9. Heterologous Expression and Protein Secretion in Filamentous Fungi

Wendy Thompson Yoder and Jan Lehmbeck

1. Introduction .....	201
2. The Past Decade .....	202
3. Development of a New Fungal Expression Host: <i>Fusarium venenatum</i> Nirenberg .....	208
3.1. Selection Criteria .....	208
3.2. Heterologous Expression .....	209
3.3. Improved Morphological Mutants .....	209
3.4. Selectable Markers .....	209
3.5. Targeted Gene Deletions .....	210
3.6. GRAS Status for the First Heterologous Enzyme Produced in <i>F. venenatum</i> .....	210
3.7. The First Commercial Recombinant <i>F. venenatum</i> Product .....	210
3.8. <i>Fusarium venenatum</i> Genomics .....	210
4. "To Infinity and Beyond" .....	211
5. Conclusions .....	212
References .....	213

### 10. Artificial Evolution of Fungal Proteins

Jesper Vind

1. Introduction .....	221
2. Artificial Evolution in General .....	221
2.1. Idea Generation .....	221
2.2. <i>In Vitro</i> Generation of Gene Variants .....	222
3. <i>In Vitro</i> Mutagenesis and Expression of Fungal Proteins .....	222
3.1. Characterization of Protein Variants Expressed in Yeast .....	222
3.2. Characterization of Protein Variants Expressed in Filamentous Fungi .....	224
3.3. Library Generation in Filamentous Fungi .....	225
4. <i>In Vivo</i> Mutagenesis in Fungi .....	226
4.1. <i>In Vivo</i> Shuffling in Yeast .....	226
4.2. <i>In Vivo</i> Shuffling in <i>Neurospora</i> .....	226
4.3. <i>In Vivo</i> Mutagenesis with the RIP System .....	228
4.4. <i>In Vivo</i> Mutagenesis with the Mismatch Repair System .....	228
5. Future in Artificial Evolution of Fungal Proteins .....	231
References .....	232

## 11. Biocatalysis and Biotransformation

Frieder Schauer and Rainer Borriss

1. Preface .....	237
2. Fungal Enzymes and Biotransformations—An Introduction .....	237
3. Glycosyl Hydrolases .....	242
3.1. Starch Hydrolysis: Amylases and Glucoamylases .....	244
3.2. Cellulose and Cellulases .....	245
3.2.1. Cellulases in Textile and Laundry Biotechnology .....	246
3.3. Hydrolysis of Hemicellulose: Xylanases and Mixed-Linked $\beta$ -Glucanases .....	246
3.3.1. Xylanases .....	246
3.3.2. Application: Delignification of Kraft Pulps by <i>Trichoderma</i> Xylanases .....	247
3.3.3. Mixed Linked $\beta$ -Glucan Hydrolyzing Enzymes .....	247
3.3.4. Application of Cellulases and Hemicellulases in Animal Feed Biotechnology .....	249
3.4. Cell Wall Lytic Enzymes .....	249
3.4.1. Macerating Enzymes in Fruit and Vegetable Processing .....	249
4. Phosphorous Mobilization: Phytases .....	249
4.1. Engineering of Improved Functionality in <i>Aspergillus</i> Phytase .....	252
5. Lipases (Triacylglycerol Hydrolases, EC 3.1.1.3) .....	253
6. Proteases .....	254
7. Degradation of Lignocellulose: Ligninolytic Enzymes .....	255
7.1. Lignin Peroxidase and Manganese Peroxidase .....	256
7.2. Laccase .....	256
7.2.1. Distribution .....	257
7.2.2. Biological Function of Laccase .....	257
7.2.3. Isoenzymes .....	258
7.2.4. Characterization and Some Biochemical Properties .....	258
7.2.5. Regulation of Laccase Production .....	259
7.2.6. Laccase Mediator Systems .....	259
7.2.7. Delignification of Ligninocellulosics by Laccase .....	260
7.2.8. Purification of Colored Waste Waters .....	260
7.2.9. Textile Dye Decolorization .....	260
7.2.10. Transformation and Inactivation of Toxic Environmental Pollutants .....	260
7.2.11. Beverage and Food Treatment .....	261
7.2.12. Laccase-Based Biosensors .....	261
7.2.13. Synthesis of New Chemicals by Laccase .....	261
7.2.14. Desulfurization and Solubilization of Coal .....	262
8. Utilization of Aromatic and Aliphatic Compounds and Hydrocarbons .....	262
9. Inactivation of Fungal Biocontrol Agents .....	263
9.1. Creosote .....	263
9.2. Pentachlorophenol .....	264
9.3. Inorganic Wood Preservatives .....	264
9.4. Disinfectants and Deodorants .....	265
9.5. Fungicides in Agriculture and Medicine .....	265

9.6. Food Preservatives .....	265
10. Biotransformation of Biphenyls by Fungi .....	266
10.1. Biphenyl .....	266
10.2. Polychlorinated Biphenyls .....	268
11. Oxidation of Dibenzofurans and Dibenzodioxins .....	269
12. Biotransformation of Diphenyl Ethers and Phenoxy Herbicides .....	272
13. Dehalogenation of Aromatic Xenobiotics .....	275
14. Trends and Future Developments .....	276
14.1. Novel Fungal Enzymes: Screening, Development, and Specific Features .....	277
14.2. Screening of Fungi Producing Improved Phytases .....	278
14.3. Diversity of Microbial Enzymes Catalyzing Stereoselective Reactions .....	279
14.4. Lactonase in D-Pantothenic Acid Production .....	279
14.5. Aldehyde Reductase in the Production of Chiral Alcohols .....	279
14.6. Laccase-Catalyzed Heteromolecular Coupling of Molecules .....	279
14.7. Heterologous Expression of Fungal Ligninolytic Enzymes .....	280
14.8. Impact of DNA Recombinant Techniques .....	280
14.9. Expression of <i>Aspergillus</i> Phytase in Transgenic Plants .....	281
14.10. Gene Libraries .....	282
14.11. Biomolecular Engineering .....	282
14.12. Concept of Directed Evolution .....	283
References .....	283

## 12. Organic Acid Production by Filamentous Fungi

*Jon K. Magnuson and Linda L. Lasure*

1. Introduction .....	307
2. Commercial Successes: Organic Acids from Filamentous Fungi .....	308
2.1. Citric Acid .....	309
2.2. Gluconic Acid .....	310
2.3. Itaconic Acid .....	310
2.4. L-Lactic Acid .....	311
2.5. Market Prospects .....	311
3. Biochemistry and Genetics of Organic Acid Production by Filamentous Fungi .....	312
3.1. <i>Aspergillus</i> and Organic Acid Production .....	312
3.1.1. Citric Acid .....	312
3.1.2. Oxalic Acid .....	319
3.1.3. Gluconic Acid .....	322
3.1.4. Itaconic Acid .....	323
3.2. <i>Rhizopus</i> and Organic Acid Production .....	325
3.2.1. L-Lactic Acid .....	325
3.2.2. Fumaric Acid .....	328
3.2.3. L-Malic Acid .....	329
3.2.4. Succinic Acid .....	330
3.2.5. (-)- <i>trans</i> -2,3-Epoxy succinic Acid and <i>meso</i> -Tartaric Acid .....	330
4. Final Perspective .....	332
References .....	333

## 13. Flavors and Fragrances

*Ralf G. Berger and Holger Zorn*

1. Introduction	341
2. Biotransformation of Terpenoids by Fungi	343
3. Biosynthesis of Terpenyl Esters	348
4. Generation of Aromatic Flavor Compounds	349
5. Flavor Compounds from Other Chemical Classes	353
6. Bioprocess Technology	353
7. Conclusion	355
References	355

## Part IV. Host-Fungal Interactions

### 14. Human Mycoses: The Role of Molecular Biology

*Donald C. Sheppard, Ashraf S. Ibrahim, and John E. Edwards Jr.*

1. Introduction	361
2. Goals in the Study of Pathogenic Filamentous Fungi	362
2.1. Identification of Virulence Factors	362
2.2. Identification of Other Drug Targets	362
3. The Genus <i>Aspergillus</i>	362
3.1. Aspergillosis: Spectrum of Disease	363
3.2. Aspergilloma	363
3.3. Invasive Aspergillosis (IA)	363
3.3.1. Epidemiology and Significance	363
3.3.2. Pathophysiology	363
3.3.3. Virulence Factors of <i>A. fumigatus</i>	364
3.3.4. Clinical Presentation of IA	364
3.3.5. Therapy of IA	364
3.4. Molecular Techniques for the Study of <i>Aspergillus</i> sp.	366
3.4.1. Selection Markers for <i>A. fumigatus</i>	366
3.4.2. Transformation Techniques	369
3.4.3. Parasexual Genetics	370
3.4.4. Signature-Tagged Mutagenesis	371
3.4.5. Reporter Gene Systems	372
3.4.6. Transposable Elements in Aspergilli	373
3.4.7. Complementation and Heterologous Expression in Aspergilli	373
3.4.8. Genome Sequencing	374
4. The Agents of Mucormycosis	375
4.1. Molecular Techniques for the Study of Mucormycosis	376
4.1.1. Transformation Techniques	377
4.1.2. Sexual Cycle	378
4.1.3. Heterologous Expression	378
4.1.4. Summary	379
5. Other Pathogenic Filamentous Fungi	379
6. Future Directions	379
References	379

## 15. Molecular Interactions of Phytopathogens and Hosts

*Joanna M. Jenkinson and Nicholas J. Talbot*

1. Introduction .....	385
1.1. The Life Cycles of <i>Magnaporthe grisea</i> and <i>Ustilago maydis</i> .....	386
2. Pathogenicity Factors .....	387
2.1. Regulators of Infection .....	387
2.1.1. The cAMP Response Pathway .....	387
2.1.2. <i>PMK1</i> and MAP Kinase Pathways in Fungal Pathogens .....	389
2.1.3. <i>PMK1</i> -Related MAP Kinases in Other Phytopathogenic Fungi .....	392
2.1.4. Alternative MAPK Pathways in <i>M. grisea</i> .....	392
2.1.5. Nutritional Regulatory Genes .....	393
2.2. Pathogen-Specific Molecules .....	394
2.2.1. Toxins and Host-Specific Toxins .....	394
2.3. Plant Recognition Evasion .....	395
2.3.1. Saponin Detoxification .....	395
2.3.2. Phytoalexin Detoxification .....	395
2.4. Proteins of Unknown Function .....	396
2.5. Pathogen Associated Molecular Patterns .....	397
2.5.1. Plant Resistance Mechanisms .....	397
2.5.2. <i>R</i> Gene and <i>Avr</i> Gene Signaling .....	398
3. Genomics of Phytopathogens .....	399
4. Future Prospects .....	400
References .....	400

## 16. Structural and Functional Genomics of Symbiotic Arbuscular Mycorrhizal Fungi

*V. Gianinazzi-Pearson, C. Azcon-Aguilar, G. Bécard, P. Bonfante, N. Ferrol, P. Franken, A. Gollotte, L.A. Harrier, L. Lanfranco, and D. van Tuinen*

1. Introduction .....	405
2. Genome Structure and Organization .....	407
3. Fungal Genes in the Symbiotic Context .....	408
3.1. Targeted Analyses of Gene Expression .....	408
3.2. Transcriptome Profiling .....	412
4. Manipulating the Symbiotic Genome .....	414
5. Endobacterial Genes .....	417
6. Conclusions .....	418
Acknowledgments .....	419
References .....	419

<b>Index</b> .....	425
--------------------	-----
