Introduction: Bark beetles, management, and climate change xix

Acknowledgments xxvii

PART I Insect distributions and novel hosts

1. Climate change and invasions by nonnative bark and ambrosia beetles 3
Deepa S. Pureswaran, Nicolas Meurisse, Davide Rassati, Andrew M. Liebhold, and Massimo Faccoli
 - 1 Introduction 3
 - 2 Key terms and concepts 7
 - 3 Factors predisposing bark and ambrosia beetles as invaders 7
 - 4 Transportation and arrival 9
 - 5 Establishment and population growth 12
 - 6 Spread of established populations 14
 - 7 Impact of climate change on fungal associates 16
 - 8 Consequences of extreme weather events on invasions 17
 - 9 Conclusions and future directions 19
- Acknowledgments 21
- References 21
2. Complexities in predicting mountain pine beetle and spruce beetle response to climate change 31
Barbara J. Bentz, E. Matthew Hansen, Marianne Davenport, and David Soderberg
 - 1 Introduction 31

2	Development rates and thresholds	35
3	Diapause	36
4	Cold hardening	41
5	Potential climate change effects on population persistence and expansion	42
6	Management implications of climate change-affected population dynamics	46
7	Conclusions	47
	Acknowledgments	47
	References	48
3.	Responses and modeling of southern pine beetle and its host pines to climate change	55
	Carissa F. Aoki, Holly L. Munro, and Kamal J.K. Gandhi	
1	Introduction	55
2	Factors influencing the geographic range of southern pine beetle	56
3	Management and monitoring data	66
4	Climate change, range expansion, and predictive modeling of southern pine beetle distribution	68
5	Conclusions	76
	Acknowledgments	77
	References	77
PART II Interactions of insects with altered host physiology		
4.	The Eurasian spruce bark beetle in a warming climate: Phenology, behavior, and biotic interactions	89
	Sigrid Netherer and Almuth Hammerbacher	
1	<i>Ips typographus</i> —destructive force and keystone species in Eurasian spruce forests	89

2	Temperature effects on spruce bark beetle phenology and population dynamics	92
3	Beetle exploration of landscape and habitat—How climatic conditions and odor sources influence dispersal and host selection	100
4	Carbon castles: The formidable defenses of Norway spruce	102
5	Are (drought) stressed spruce trees more susceptible to <i>Ips typographus</i> attack?	106
6	The tripartite Norway spruce, <i>Ips typographus</i> , and fungal symbionts system	111
7	Bark beetle–Norway spruce interactions in a changing climate—Perspectives for science and management	117
	Acknowledgments	118
	References	118
5.	Climate change alters host tree physiology and drives plant-insect interactions in forests of the southwestern United States of America	133
	Thomas Seth Davis	
1	Introduction	133
2	Impacts of climate drivers on plant-insect interactions in southwestern USA forest ecosystems	137
3	What are the gaps in our understanding of plant-insect interactions under climate change in southwestern forests?	145
4	Conclusions	147
	Acknowledgments	147
	References	147
	Further reading	151

6. Relationships between drought, coniferous tree physiology, and <i>Ips</i> bark beetles under climatic changes	153
Bailey H. McNichol, Stephen R. Clarke, Massimo Faccoli, Cristian R. Montes, John T. Nowak, John D. Reeve, and Kamal J.K. Gandhi	
1 Introduction	153
2 Results from literature linking <i>Ips</i> bark beetle outbreaks and drought	156
3 Economic and ecological consequences of drought and <i>Ips</i> beetle outbreaks on conifers	172
4 Anticipated changes in conifer physiology due to climate change	174
5 Insect-plant interactions in host trees experiencing drought stress	176
6 <i>Ips</i> -drought interactions: A conceptual framework	179
7 Research gaps	179
8 Conclusions and future research directions	180
Acknowledgments	182
References	182

PART III Interactions of insects with altered disturbance regimes

7. Interactions between catastrophic wind disturbances and bark beetles in forested ecosystems	197
Benjamin M. Gochnour, Seth C. Spinner, Kier D. Klepzig, and Kamal J.K. Gandhi	
1 Introduction	197
2 Interactions of wind disturbance with bark beetles	202
3 Postwindstorm forest management practices	208

4 Conceptual model of cross-scale interactions between windthrow and bark beetles	212
5 Conclusions	213
Acknowledgments	214
References	214

PART IV Ecosystem-level impacts of bark beetle outbreaks due to climate change

8. Bark beetle outbreaks alter biotic components of forested ecosystems	227
Kamal J.K. Gandhi, Chelsea N. Miller, Paula J. Fornwalt, and John M. Frank	
1 Introduction	227
2 Changes to the abiotic forest environment	230
3 Changes to forest structure by bark beetle outbreaks	232
4 Responses of flora following bark beetle outbreaks	233
5 Responses of fauna following bark beetle outbreaks	239
6 Responses of soil microbiota following bark beetle outbreaks	247
7 Conclusions	249
Acknowledgments	251
References	251
9. Eastern larch beetle, a changing climate, and impacts to northern tamarack forests	261
Fraser R. McKee, Marcella A. Windmuller-Campione, Emily R. Althoff, Michael R. Reinikainen, Paul A. Dubuque, and Brian H. Aukema	
1 Introduction	261
2 Host species	264

3	Predisposing factors associated with tree-killing activity of eastern larch beetles	266
4	Biology and ecology of eastern larch beetle	268
5	Shifts to bivoltine development in a warming climate	282
6	The impact of eastern larch beetle outbreaks on forests	284
7	Silvicultural systems of eastern larch	285
8	Future research needs	290
	References	294

PART V Multitrophic changes mediated via climate change

10.	Effects of rising temperatures on ectosymbiotic communities associated with bark and ambrosia beetles	303
	Richard W. Hofstetter, Kier D. Klepzig, and Caterina Villari	
1	Introduction	303
2	Functions and interactions of ectosymbionts within beetle-infested trees	306
3	Ectosymbiotic communities and their relationship with climate variables	312
4	Direct effects of temperature of ectosymbionts	313
5	Effects of climate change on tree condition (secondary defenses, nutrition, moisture) and the symbiotic community	318
6	Projected effects of climate (temperature regimes, drought) and changes to the ectosymbiotic community on bark beetle ecology	320
7	Conceptual model	322
8	Testable hypotheses	324
9	Critical research needs	325
	References	326

PART VI Management of bark beetles in altered forests and climate conditions

- | | |
|--|-----|
| 11. Management tactics to reduce bark beetle impacts in North America and Europe under altered forest and climatic conditions | 345 |
| Christopher J. Fettig, Joel M. Egan, Horst Delb,
Jacek Hilszczański, Markus Kautz, A. Steven Munson,
John T. Nowak, and Jose F. Negrón | |
| 1 Introduction | 345 |
| 2 Development of outbreaks | 349 |
| 3 Detection, survey, and risk and hazard rating models | 351 |
| 4 Suppression | 352 |
| 5 Sanitation | 352 |
| 6 Insecticides | 353 |
| 7 Semiochemicals | 354 |
| 8 Prevention | 355 |
| 9 Case study 1— <i>Dendroctonus</i> spp. in yellow pine forests in the western United States: Changes in forest structure and composition from fire suppression, livestock grazing, and climatic changes increase host-tree susceptibility | 357 |
| 10 Case study 2— <i>Dendroctonus ponderosae</i> in pine forests in western North America: Climatic changes increase beetle overwintering survival and host susceptibility | 365 |
| 11 Case study 3— <i>Dendroctonus rufipennis</i> in spruce forests in western North America: Climatic changes increase beetle voltinism and host susceptibility | 367 |
| 12 Case study 4— <i>Dendroctonus frontalis</i> in pine forests in the eastern United States: A native bark beetle goes invasive | 370 |
| 13 Case study 5— <i>Ips acuminatus</i> in <i>Pinus sylvestris</i> forests in central Europe: Climatic changes increase host susceptibility and create a “new” forest insect pest | 373 |

14 Case study 6— <i>Ips typographus</i> in <i>Picea abies</i> forests in central Europe: Climatic changes and the legacy of off-site plantings increase forest susceptibility	375
15 Conclusions	379
Acknowledgments	380
References	380
12. Interactions among climate, disturbance, and bark beetles affect forest landscapes of the future	395
Richard W. Hofstetter and Kamal J.K. Gandhi	
1 Introduction	395
2 Forest management	398
3 Ten research needs and gaps	399
References	400
Index	405
