

Contents

1 The Dynamic and Evolving Earth 1

- Introduction 2
- What Is Geology? 4
- Historical Geology and the Formulation of Theories 4
- Origin of the Universe and Solar System and Earth's Place in the Cosmos 4
 - Origin of the Universe—Did It Begin with a Big Bang? 4
 - Our Solar System—Its Origin and Evolution 6
- PERSPECTIVE Exoplanets 8**
 - Earth—Its Place in Our Solar System 10
- Why Earth Is a Dynamic and Evolving Planet 10
 - Plate Tectonic Theory 12
- Organic Evolution and the History of Life 12
- Geologic Time and Uniformitarianism 13
- How Does the Study of Historical Geology Benefit Us? 14
- Summary 16

2 Minerals and Rocks 18

- Introduction 19
- Matter—What Is It? 20
 - Elements and Atoms 20
 - Bonding and Compounds 20
- Minerals—The Building Blocks of Rocks 21
 - How Many Minerals Are There? 22
 - Rock-Forming Minerals and the Rock Cycle 23
- Igneous Rocks 23
 - Composition and Texture 24
 - Classifying Igneous Rocks 25
- Sedimentary Rocks 27
 - Sediment Transport, Deposition, and Lithification 27
 - Classification of Sedimentary Rocks 27
- Metamorphic Rocks 29
 - What Causes Metamorphism? 30
 - Metamorphic Rock Classification 32
- Plate Tectonics and the Rock Cycle 34
- Economic Geology 34
- PERSPECTIVE The Industrial Minerals 35**
- Summary 35

3 Plate Tectonics: A Unifying Theory 38

- Introduction 39
- Early Ideas About Continental Drift 39
 - Alfred Wegener and the Continental Drift Hypothesis 40
- What Is the Evidence for Continental Drift? 41
 - Continental Fit 41
 - Similarity of Rock Sequences and Mountain Ranges 41
 - Glacial Evidence 41
 - Fossil Evidence 42
- Earth's Magnetic Field 44
- Magnetic Reversals and Seafloor Spreading 45
- Plate Tectonics: A Unifying Theory 46
- The Three Types of Plate Boundaries 48
 - Divergent Boundaries 48
- PERSPECTIVE Plate Boundaries, Earthquakes, and Tsunami 49**
 - An Example of Ancient Rifting 50
 - Convergent Boundaries 52
 - Recognizing Ancient Convergent Plate Boundaries 54
 - Transform Boundaries 55
- Hot Spots and Mantle Plumes 55
- How Are Plate Movement and Motion Determined? 55
- The Driving Mechanism of Plate Tectonics 57
- Plate Tectonics and Mountain Building 59
- Plate Tectonics and the Distribution of Life 59
- Plate Tectonics and the Distribution of Natural Resources 60
 - Petroleum 60
 - Mineral Deposits 61
- Summary 62

4 Geologic Time: Concepts and Principles 65

- Introduction 66
- How Is Geologic Time Measured? 66
- Early Concepts of Geologic Time and Earth's Age 67
- PERSPECTIVE The Anthropocene: A New Geologic Epoch? 68**

James Hutton and the Recognition of Geologic Time 70

Lord Kelvin and a Crisis in Geology 71

Modern View of Uniformitarianism 71

Relative Dating Methods 71

Fundamental Principles of Relative Dating 71

Numerical Dating Methods 72

Atoms, Elements, and Isotopes 73

Radioactive Decay and Half-Lives 73

Sources of Uncertainty 75

Long-Lived Radioactive Isotope Pairs 77

Other Radioactive Isotope Pairs 77

Fission-Track Dating 78

Radiocarbon and Tree-Ring Dating Methods 78

Geologic Time and Climate Change 79

Summary 81

5 Rocks, Fossils, and Time:

Making Sense of the Geologic Record 84

Introduction 85

Stratigraphy 86

Vertical Stratigraphic Relationships 86

Lateral Relationships—Facies 88

Marine Transgressions and Regressions 88

Extent, Rates, and Causes of Marine Transgressions
and Regressions 90

Fossils and Fossilization 91

How Do Fossils Form? 92

Fossils and Relative Time 95

The Relative Geologic Time Scale 95

Stratigraphic Terminology 97

Stratigraphic Units Defined by Their Content 97

PERSPECTIVE Mesa Verde National Park, Colorado 99

Stratigraphic Units Expressing or Related
to Geologic Time 100

Correlation 101

Numerical Dates and the Relative Geologic
Time Scale 103

Summary 105

6 Sedimentary Rocks:

The Archives of Earth History 107

Introduction 108

Sedimentary Rock Properties 108

Composition and Texture 109

Sedimentary Structures 109

**PERSPECTIVE The Remarkable Boulders at Rock City
and Mushroom Rock State Park, Kansas 114**

Geometry of Sedimentary Rocks 115

Fossils—The Biologic Content of Sedimentary Rocks 115

Depositional Environments 116

Continental Environments 116

Transitional Environments 117

Marine Environments 119

Interpreting Depositional Environments 124

Paleogeography 125

Summary 127

7 Evolution:

The Theory and Its Supporting Evidence 130

Introduction 131

Evolution: What Does It Mean? 131

Jean-Baptiste de Lamarck's Ideas About Evolution 133

Charles Darwin and Alfred Wallace on Evolution 133

What Is the Significance of Natural Selection? 134

Mendel and the Birth of Genetics 135

Mendel's Experiments 135

Genes and Chromosomes 136

The Modern View of Evolution 136

What Brings About Variation? 137

Speciation and the Rate of Evolution 138

Divergent, Convergent, and Parallel Evolution 139

Mosaic Evolution and Evolutionary Trends 140

Cladistics and Cladograms 141

Extinctions 143

What Kinds of Evidence Support Evolutionary
Theory? 143

Classification—A Nested Pattern of Similarities 144

Biologic Evidence That Supports Evolution 145

Biogeography 146

Fossils: What Do We Learn From Them? 147

PERSPECTIVE Building a Dinochicken 148

Missing Links—Are They Really Missing? 148

The Evidence—A Summary 148

Summary 149

8 Precambrian Earth and Life History:

The Hadean and the Archean Eon 151

Introduction 152

What Happened During the Hadean? 153

The Faint Young Sun Paradox 155

Archean Earth History 155

Shields, Platforms, and Cratons 155

Archean Rocks 156

Greenstone Belts	156
Evolution of Greenstone Belts	158
Archean Plate Tectonics and the Origin of Cratons	158
The Atmosphere and Hydrosphere	160
How Did the Atmosphere Form and Evolve?	160
PERSPECTIVE The Terrestrial Planets and Plate Tectonics	161
The Hydrosphere—Earth's Surface Waters	162
Life—Its Origin and Early History	163
The Origin of Life	164
Submarine Hydrothermal Vents and the Origin of Life	165
Earth's Oldest Known Organisms	165
Archean Mineral Resources	167
Summary	168

9 Precambrian Earth and Life History: The Proterozoic Eon 171

Introduction	172
Proterozoic History of Laurentia	172
Laurentia During the Paleoproterozoic	173
Mesoproterozoic Accretion and Igneous Activity	175
Mesoproterozoic Orogeny and Rifting	175
Meso- and Neoproterozoic Sedimentation	176
Proterozoic Supercontinents	177
Ancient Glaciers and Their Deposits	179
Paleoproterozoic Glaciers	179
Glaciers of the Neoproterozoic	179
The Evolving Atmosphere	181
The Great Oxygenation Event	181
Proterozoic Life	181
Eukaryotic Cells Evolve	182
Endosymbiosis and the Origin of Eukaryotic Cells	184
The Dawn of Multicelled Organisms	184
Neoproterozoic Animals	185
Proterozoic Mineral Resources	186
PERSPECTIVE Banded Iron Formation: From Mine to Steel Mill	188
Summary	189

10 Early Paleozoic Earth History 192

Introduction	193
Continental Architecture: Cratons and Mobile Belts	193
Paleozoic Paleogeography	194
Early Paleozoic Global History	195

Early Paleozoic Evolution of North America	197
The Sauk Sequence	198
The Cambrian of the Grand Canyon Region: A Transgressive Facies Model	198
PERSPECTIVE The Grand Canyon—A Geologist's Paradise	200
The Tippecanoe Sequence	201
Tippecanoe Reefs and Evaporites	202
The End of the Tippecanoe Sequence	205
The Appalachian Mobile Belt and the Taconic Orogeny	206
Early Paleozoic Mineral Resources	208
Summary	210

11 Late Paleozoic Earth History 213

Introduction	214
Late Paleozoic Paleogeography	214
The Devonian Period	215
The Carboniferous Period	215
The Permian Period	215
Late Paleozoic Evolution of North America	218
The Kaskaskia Sequence	218
Reef Development in Western Canada	218
Black Shales	218
Glaciation	220
The Late Kaskaskia—A Return to Extensive Carbonate Deposition	220
PERSPECTIVE Hydraulic Fracturing: Pros and Cons	221
The Absaroka Sequence	223
What Are Cyclothems and Why Are They Important?	225
Cratonic Uplift—The Ancestral Rockies	227
The Middle Absaroka—More Evaporite Deposits and Reefs	227
History of the Late Paleozoic Mobile Belts	227
Cordilleran Mobile Belt	227
Ouachita Mobile Belt	230
Appalachian Mobile Belt	231
What Role Did Microplates and Terranes Play in the Formation of Pangaea?	233
Late Paleozoic Mineral Resources	233
Summary	235

12 Paleozoic Life History: Invertebrates 238

Introduction	239
What Was the Cambrian Explosion?	239

- The Emergence of a Shelly Fauna 240
- The Present-Day Marine Ecosystem 241
- Paleozoic Invertebrate Marine Life 242
 - Cambrian Marine Community 242
- PERSPECTIVE Trilobites—Paleozoic Arthropods 244**
 - The Burgess Shale Biota 246
 - Ordovician Marine Community 248
 - Silurian and Devonian Marine Communities 250
 - Carboniferous and Permian Marine Communities 251
- Mass Extinctions 252
 - The Permian Mass Extinction 254
- Summary 254

13 Paleozoic Life History:

Vertebrates and Plants 257

- Introduction 258
- Vertebrate Evolution 258
- Fish 259
- Amphibians—Vertebrates Invade the Land 265
- Evolution of the Reptiles—The Land Is Conquered 266
- Plant Evolution 269
 - Silurian and Devonian Floras 270
 - Late Carboniferous and Permian Floras 272
- PERSPECTIVE Using Palynology to Address Geologic and Environmental Issues 274**
- Summary 275

14 Mesozoic Earth History 278

- Introduction 279
- The Breakup of Pangaea 279
 - The Effects of the Breakup of Pangaea on Global Climates and Ocean Circulation Patterns 281
- Mesozoic History of North America 282
- Continental Interior 282
- Eastern Coastal Region 282
- Gulf Coastal Region 284
- Western Region 285
 - Mesozoic Tectonics 286
 - Mesozoic Sedimentation 290
- PERSPECTIVE Petrified Forest National Park, Arizona 292**
- What Role Did Accretion of Terranes Play in the Growth of Western North America? 295
- Mesozoic Mineral Resources 296
- Summary 297

15 Life of the Mesozoic Era 300

- Introduction 301
- Marine Invertebrates and Phytoplankton 301
- Aquatic and Semiaquatic Vertebrates 303
 - Fishes 303
 - Amphibians 304
- Plants—Primary Producers on Land 304
- The Diversification of Reptiles 304
 - Archosaurs and the Origin of Dinosaurs 305
 - Dinosaurs 306
 - Warm-Blooded Dinosaurs? 311
 - Flying Reptiles 312
 - Mesozoic Marine Reptiles 312
 - Crocodiles, Turtles, Lizards, and Snakes 313
- The Origin and Evolution of Birds 313
- PERSPECTIVE Mary Anning's Contributions to Paleontology 314**
- The Origin and Evolution of Mammals 315
 - Cynodonts and the Origin of Mammals 315
 - Mesozoic Mammals 317
- Mesozoic Climates and Paleobiogeography 317
- Mass Extinctions—A Crisis in Life History 318
- Summary 320

16 Cenozoic Earth History:

The Paleogene and Neogene Periods 322

- Introduction 323
- Cenozoic Plate Tectonics—An Overview 324
- Cenozoic Orogenic Belts 325
 - Alpine–Himalayan Orogenic Belt 325
 - Circum-Pacific Orogenic Belt 327
- North American Cordillera 329
 - Laramide Orogeny 329
 - Cordilleran Igneous Activity 331
 - Basin and Range Province 333
 - Colorado Plateau 334
 - Rio Grande Rift 335
 - Pacific Coast 335
- The Continental Interior 336
- PERSPECTIVE Devils Tower National Monument, Wyoming 337**
- Cenozoic History of the Appalachian Mountains 338
- North America's Southern and Eastern Continental Margins 338
 - Gulf Coastal Plain 338
 - Atlantic Continental Margin 341
- Paleogene and Neogene Mineral Resources 341
- Summary 342

17 Cenozoic Earth History:

The Quaternary Period 344

Introduction 345

Pleistocene and Holocene Tectonism
and Volcanism 345

Tectonism 345
Volcanism 346

Pleistocene Stratigraphy 347

Terrestrial Stratigraphy 347
Deep-Sea Stratigraphy 347

Onset of the Ice Age 349

Climates of the Pleistocene and Holocene 349
Glaciers—How Do They Form? 351

Glaciation and Its Effects 351

Glacial Landforms 352

PERSPECTIVE Glaciers and Global Warming 353

Changes in Sea Level 354
Glaciers and Isostasy 355
Pluvial and Proglacial Lakes 356

What Caused Pleistocene Glaciation? 358

The Milankovitch Theory 358
Short-Term Climatic Events 360

Glaciers Today 360

Quaternary Mineral Resources 361

Summary 361

18 Life of the Cenozoic Era 363

Introduction 364

Marine Invertebrates and Phytoplankton 364

Cenozoic Vegetation and Climate 366

Cenozoic Birds 368

The Age of Mammals Begins 368

PERSPECTIVE Fossil Forests 369

Monotremes and Marsupial Mammals 370
Diversification of Placental Mammals 370

Paleogene and Neogene Mammals 372

Small Mammals—Insectivores, Rodents, Rabbits,
and Bats 372

A Brief History of the Primates 374

The Meat Eaters—Carnivorous Mammals 374

The Ungulates, or Hoofed Mammals 375

Giant Land-Dwelling Mammals—Elephants 378

Giant Aquatic Mammals—Whales 379

Pleistocene Faunas 380

Ice Age Mammals 380
Pleistocene Extinctions 381

Intercontinental Migrations 383

Summary 384

19 Primate and Human Evolution 386

Introduction 387

What Are Primates? 387

Prosimians 387

Anthropoids 388

Hominids and Hominins 390

Australopithecines 390
The Human Lineage 395

**PERSPECTIVE Discovery of a 1.8 Million-Year-Old Skull
at Dmanisi, Georgia, Sheds New Light on Early Homo
Evolution 396**

Summary 400

Epilogue 402

Appendix A

English-Metric Conversion Chart 409

Appendix B

Classification of Organisms 410

Appendix C

Mineral Identification 415

Appendix D

A Refresher on Structural Geology 418

Glossary 422

Answers to Multiple-Choice Review Questions 429

Index 430
