12

UK set to face future challenges

Both the UK's hydropower and water supply industries face future changes

18

Switzerland: the European Water Vessel

The nation's iconic dams and innovative water management strategies emerge as its shield against climate impact

20

Déjà-vu on the Oder

Ensuring river water quality

22

European insights

New hydro developments across the continent

Refurbishment

25

Innovations in high-voltage windings

R&D efforts offer a practical path to enhancing generator performance

26

Transformative modernisation

Projects worldwide address challenges from corrosion through to control systems

30

Hydropower modernisation is the key

The significant role modernising existing hydropower assets can play in accelerating the African energy transition.

Small hydro

34

Quantifying impacts

New research into the impact of small hydropower development across the Balkans aims to help decisionmakers better understand the consequences of such plans

36

Small scale solutions

IWP&DC discovers how small hydropower is empowering communities through innovative solutions, ranging from microgrids to precision controls

Finance

38

Advancing investment

A report by the IEA and the IFC underscores the urgent need for substantial increases in annual clean energy investments in emerging economies.

Dams

42

Diversion begins for Polihali dam

A major milestone was reached in the Polihali Dam construction programme in early August 2023 by closing the flow of the Senqu River to start the diversion of its waters through the project's diversion tunnels

Wave and tidal power

44

A leap of faith

As the European Marine Energy Centre celebrates its 20th anniversary, campaigns in the US are helping to pave the way for development
