<i>Preface</i>	<i>xv</i>
<i>Acknowledgments</i>	<i>xx</i>
1 What Is Measurement?	1
1.1 Keating's War and Thorndike's Credo	1
1.2 What Is (and What Is Not) Measurement?	3
1.2.1 Four Definitions of Measurement	3
1.2.2 Measurement Terminology	5
Attributes and Objects	5
Classical Conception of Quantity, Magnitude, and Units	5
Extensive and Intensive Attributes	6
The Metrological Definition of Quantity and the Role of the Reference	8
Homogeneity	9
Experimentation and Invariance	10
1.2.3 So Can We Measure the Greatness of a Poem?	11
1.3 Educational and Psychological Measurement	12
1.4 Overview of This Book	15
Appendix: Some Important Statistical Concepts	21
The Binomial Probability Distribution	21
The Law of Errors: The Normal Distribution	23
The Central Limit Theorem	23
The Probable Error	24

2	Psychophysical Measurement: Gustav Fechner and the Just Noticeable Difference	27
2.1	Overview	27
2.2	The Origins of Psychophysics	32
2.2.1	Fechner's Background	32
2.2.2	Fechner's Conceptualization of Measurement	35
2.2.3	Weber's Law	37
2.2.4	A Measurement Formula	39
2.3	The Method of Right and Wrong Cases (the Constant Method)	41
2.3.1	An Illustration of the Experiment	41
2.3.2	Applying the Law of Errors	43
2.4	Criticisms	50
2.4.1	The Quantity Objection	51
2.4.2	Derivation of the Measurement Formula and Estimation of <i>jnds</i>	55
2.5	Fechner's Legacy	56
2.6	Sources and Further Reading	59
	Appendix: Technical Details of Applying the Cumulative Normal Distribution Function as Part of the Constant Method	60
3	Whenever You Can, Count: Francis Galton and the Measurement of Individual Differences	63
3.1	Overview	63
3.2	Galton's Background	65
3.2.1	The Polymath	65
3.2.2	Nature and Nurture	66
3.2.3	A Brush With Failure	68
3.2.4	Heredity and Individual Differences	71
3.3	Three Influences on Galton's Thinking	73
3.3.1	Quetelet's Social Physics	73
3.3.2	The Quincunx	74
3.3.3	The Cambridge Mathematics Tripos	75
3.4	The Concept of Relative Measurement	78
3.4.1	Use of the Normal Distribution in <i>Hereditary Genius</i>	78
3.4.2	A Statistical Scale for Intercomparisons	85
3.5	Galton's Conceptualization of Measurement	89
	Appendix: An Illustration of Galton's Method of Intercomparison (Relative Measurement)	95
4	Anthropometric Laboratories, Regression, and the Cautionary Tale of Eugenics	100
4.1	Galton's Instrumental Innovations	100
4.1.1	Anthropometric Laboratories	100

	Test of Color Sense	105
	Test of Length Judgment	105
	Test of Angle Judgment	105
4.1.2	Exploratory Instrumental Approaches to the Measurement of Human Intelligence	107
	Mental Imagery and Visualization	108
	Associative Processes	110
4.2	The Discovery of Regression and Correlation	111
4.2.1	Galton's Initial Insights About a Statistical Model for Heredity	113
4.2.2	Regression to Mediocrity	117
4.2.3	Correlation	121
4.3	The Horror of Eugenics	124
4.4	Galton's Legacy	130
4.5	Sources and Further Reading	131
5	Mental Tests and Measuring Scales: The Innovations of Alfred Binet	135
5.1	Overview	135
5.2	Binet's Background	139
5.2.1	By the Force of His Fists	139
5.2.2	From Hypnosis to the Intellectual Development of Children	142
5.3	The Binet-Simon Measuring Scale	144
5.3.1	Necessity as the Mother of Invention	144
5.3.2	The 1905 Scale	148
5.3.3	The 1908 and 1911 Revisions	155
5.3.4	The Role of Education	162
5.4	Binet's Conceptualization of Measurement	164
5.5	Criticisms	168
5.6	Binet's Legacy	170
5.7	Sources and Further Reading	173
6	Measurement Error and the Concept of Reliability	177
6.1	Overview	177
6.2	Spearman's Background	179
6.3	Disattenuating Correlation Coefficients	182
6.4	Replications, Occasions, and Measurement Error	187
6.4.1	Yule's Proof	187
6.4.2	Thought Experiments and Shots Fired	189
6.4.3	The Problem of Defining a Unique Measurement Occasion	193
6.5	Varying Test Items and the Spearman-Brown Prophecy Formula	196
6.6	The Development of Classical Test Theory	199

7	Measurement Through Correlation: Spearman's Theory of Two Factors	205
7.1	Formalization of the Theory of Two Factors	205
7.2	Method of Corroborating the Theory	208
7.3	Building a Model of Human Cognition	211
7.4	The Interpretation of g	216
7.5	The Utility of the Two-Factor Theory	218
7.6	Spearman's Conceptualization of Measurement	221
8	Theory vs. Method in the Measurement of Intelligence	227
8.1	Challenges to the Theory of Two Factors	227
8.2	Godfrey Thomson's Sampling Theory of Ability	229
8.3	Edwin Wilson and the Indeterminacy of g	235
8.4	Louis Thurstone's Multiple-Factor Method	239
8.5	Spearman on Defense	243
8.5.1	Responses to Thomson	244
8.5.2	Responses to Wilson	245
8.5.3	Responses to Thurstone	247
8.6	Spearman's Legacy	248
8.7	Sources and Further Reading	252
	Appendix: Simulating Thomson's Sampling Theory Model	254
9	The Seeds of Psychometrics: Thurstone's Subjective Units	259
9.1	Overview	259
9.2	Thurstone's Background	260
9.3	Toward Psychological Measurement	265
9.3.1	Discriminal Processes	265
9.3.2	The Law of Comparative Judgment	270
9.4	Constructing a Psychological Continuum	273
9.4.1	Applying the Law of Comparative Judgment in the <i>Street of Chance</i> Experiment	274
9.4.2	Applying the Method of Equal Appearing Intervals in <i>The Hide-Out</i> Experiment	279
9.5	Thurstone's Conception of Measurement	283
9.5.1	Subjective Measurement Units	283
9.5.2	The Role of Invariance	285
9.6	Likert Scales	286
9.7	Thurstone's Legacy	288
9.8	Sources and Further Reading	289
10	Representation, Operations, and the Scale Taxonomy of S. S. Stevens	292
10.1	Overview	292
10.2	Stevens's Background	295

7	Measurement Through Correlation: Spearman's Theory of Two Factors	205
7.1	Formalization of the Theory of Two Factors	205
7.2	Method of Corroborating the Theory	208
7.3	Building a Model of Human Cognition	211
7.4	The Interpretation of g	216
7.5	The Utility of the Two-Factor Theory	218
7.6	Spearman's Conceptualization of Measurement	221
8	Theory vs. Method in the Measurement of Intelligence	227
8.1	Challenges to the Theory of Two Factors	227
8.2	Godfrey Thomson's Sampling Theory of Ability	229
8.3	Edwin Wilson and the Indeterminacy of g	235
8.4	Louis Thurstone's Multiple-Factor Method	239
8.5	Spearman on Defense	243
8.5.1	Responses to Thomson	244
8.5.2	Responses to Wilson	245
8.5.3	Responses to Thurstone	247
8.6	Spearman's Legacy	248
8.7	Sources and Further Reading	252
	Appendix: Simulating Thomson's Sampling Theory Model	254
9	The Seeds of Psychometrics: Thurstone's Subjective Units	259
9.1	Overview	259
9.2	Thurstone's Background	260
9.3	Toward Psychological Measurement	265
9.3.1	Discriminal Processes	265
9.3.2	The Law of Comparative Judgment	270
9.4	Constructing a Psychological Continuum	273
9.4.1	Applying the Law of Comparative Judgment in the <i>Street of Chance</i> Experiment	274
9.4.2	Applying the Method of Equal Appearing Intervals in <i>The Hide-Out</i> Experiment	279
9.5	Thurstone's Conception of Measurement	283
9.5.1	Subjective Measurement Units	283
9.5.2	The Role of Invariance	285
9.6	Likert Scales	286
9.7	Thurstone's Legacy	288
9.8	Sources and Further Reading	289
10	Representation, Operations, and the Scale Taxonomy of S. S. Stevens	292
10.1	Overview	292
10.2	Stevens's Background	295

10.3	Norman Campbell and the Representational Approach to Measurement	298
10.3.1	Fundamental and Derived Measurement	298
10.3.2	The Ferguson Committee	303
10.4	Stevens's Conceptualization of Measurement	304
10.4.1	On the Theory of Scales of Measurement	304
	Broadening the Definition of Measurement	304
	The Stevens Scale Taxonomy	306
10.4.2	Operationalism	310
10.5	The Process of Operational Measurement	313
10.5.1	The Method of Magnitude Estimation	313
10.5.2	The Power Law	316
10.5.3	Cross-Modality Matching	317
10.5.4	The Role of Argument and Pragmatism	319
10.6	Criticisms	321
10.6.1	A Logical Inconsistency and an Operational Problem	321
10.6.2	An Axiomatic Critique	322
10.6.3	Michell's Realist Critique	326
10.7	Stevens's Legacy to Measurement	329
10.8	Sources and Further Reading	332
