<b>1</b>	<b>Structural Chemistry of Hydrogen</b>	<b>1</b>
1.1	The Bonding Types of Hydrogen	1
1.2	Hydrogen Bond	4
1.2.1	Nature and geometry of the hydrogen bond	4
1.2.2	IUPAC definition of the hydrogen bond	7
1.2.3	The strength of hydrogen bonds	8
1.2.4	Symmetrical hydrogen bond	9
1.2.5	Hydrogen bonds in organometallic compounds	10
1.2.6	The universality and importance of hydrogen bonds	11
1.3	Non-conventional Hydrogen Bonds	13
1.3.1	X-H... $\pi$ hydrogen bond	13
1.3.2	C-H...Cl <sup>-</sup> hydrogen bond	14
1.3.3	Transition metal hydrogen bond X-H...M	16
1.3.4	Dihydrogen bond X-H...H-E	17
1.3.5	Inverse hydrogen bond	18
1.3.6	Nature of short and strong hydrogen bonds (SHBs)	19
1.4	Hydride Complexes	21
1.4.1	Covalent metal hydride complexes	21
1.4.2	Interstitial and high-coordinate hydride complexes	23
1.5	Molecular Hydrogen (H <sub>2</sub> ) Coordination Compounds and $\sigma$ -Bond Complexes	26
1.5.1	Structure and bonding of H <sub>2</sub> coordination compounds	26
1.5.2	X-H $\sigma$ -bond coordination metal complexes	29
1.5.3	Agostic bond	30
1.5.4	Structure and bonding of $\sigma$ complexes	32
1.6	Coinage Metal Hydrides	35
1.6.1	Copper hydrides	35
1.6.2	Silver hydrides	36
1.6.3	Gold hydrides	36
1.6.4	Molecular heterometallic polyhydride cluster	37
	General References	38
<b>2</b>	<b>Structural Chemistry of Alkali and Alkaline-Earth Metals</b>	<b>39</b>
2.1	Survey of the Alkali Metals	39
2.2	Structure and Bonding in Inorganic Alkali Metal Compounds	40
2.2.1	Alkali metal oxides	40
2.2.2	Lithium nitride	42
2.2.3	Novel sodium compounds containing dinitrogen	43
2.2.4	Inorganic alkali metal complexes	45

2.3	Structure and Bonding in Organic Alkali Metal Compounds	51
2.3.1	Methyl lithium and related compounds	51
2.3.2	$\pi$ -Complexes of lithium	52
2.3.3	$\pi$ -Complexes of sodium and potassium	53
2.4	Alkalides and Electrides	54
2.4.1	Alkalides	54
2.4.2	Electrides	55
2.5	Survey of the Alkaline-Earth Metals	57
2.6	Structure of Compounds of Alkaline-Earth Metals	58
2.6.1	Group 2 metal complexes	58
2.6.2	Group 2 metal nitrides	60
2.6.3	Group 2 low-valent oxides and nitrides	60
2.7	Organometallic Compounds of Group 2 Elements	63
2.7.1	Polymeric chains	63
2.7.2	Grignard reagents	63
2.7.3	Alkaline-earth metallocenes	64
2.8	Alkali and Alkaline-Earth Metal Complexes with Inverse Crown Structures	65
2.9	Alkaline-Earth Metal Hydrides	66
2.10	Molecular Zero-Valent Beryllium Compounds	67
2.11	Beryllium Complexes Containing Bidentate N-Donor Ligand	68
2.12	Stable Dimeric Magnesium(I) Compounds	69
2.13	Magnesium(II) Carbene Complex	70
2.14	Low-Valent Monovalent Calcium Complexes Stabilized by Bulky $\beta$ -diketiminato Ligand	71
	General References	72
<b>3</b>	<b>Structural Chemistry of Group 13 Elements</b>	<b>73</b>
3.1	Survey of the Group 13 Elements	73
3.2	Elemental Boron	73
3.3	Borides	77
3.3.1	Metal borides	78
3.3.2	Non-metal borides	81
3.3.3	Critical description of molecular compound containing a boron-boron multiple bond	84
3.3.4	$B\equiv E$ ( $E = N$ and $O$ ) and $B=B$ multiple bonds in the coordination sphere of platinum group metals	86
3.4	Boranes and Carboranes	87
3.4.1	Molecular structure and bonding	87
3.4.2	Bond valence in molecular skeletons	90
3.4.3	Structural types of borane and carborane and Wade's rules	91
3.4.4	Chemical bonding in <i>closo</i> -boranes	94
3.4.5	Chemical bonding in <i>nido</i> - and <i>arachno</i> -boranes	95
3.4.6	Electron-counting scheme for macropolyhedral boranes: <i>mno</i> rule	98
3.4.7	Electronic structure of $\beta$ -rhombohedral boron	100
3.4.8	Persubstituted derivatives of icosahedral borane $B_{12}H_{12}^{2-}$	100
3.4.9	Boranes and carboranes as ligands	102

3.4.10	Carborane skeletons beyond the icosahedron	103
3.5	Boric Acid and Borates	105
3.5.1	Boric acid	105
3.5.2	Structure of borates	107
3.6	Organometallic Compounds of Group 13 Elements	109
3.6.1	Compounds with bridged structure	109
3.6.2	Compounds with $\pi$ bonding	110
3.6.3	Compounds containing M–M bonds	111
3.6.4	Linear catenation in heavier Group 13 elements	112
3.7	Structure of Naked Anionic Metalloid Clusters	113
3.7.1	Structure of $\text{Ga}_{84}[\text{N}(\text{SiMe}_3)_2]_{20}^{4-}$	114
3.7.2	Structure of $\text{NaTl}$	115
3.7.3	Naked $\text{Tl}_n^{m-}$ anion clusters	116
3.8	Ligand “Brackets” for Ga–Ga Bond	117
3.9	Molecular Indium(III) Phosphonates Possessing Ring and Cage Structures	120
3.10	Thallium(I) polymeric compounds containing linear $\text{Tl(I)}\text{--M}$ arrays [ $\text{M} = \text{Pt(II)}$ , $\text{Au(I)}$ ]	122
3.10.1	Supramolecular compounds with $\text{Tl}\text{--Pt}$ polymeric chains	122
3.10.2	Supramolecular compounds with $\text{Tl}\text{--Au}$ polymeric chains	124
3.11	Platinum–Thallium Clusters	125
3.12	Triel Bonding and Coordination of Triel Centers	126
	General References	128
<b>4</b>	<b>Structural Chemistry of Group 14 Elements</b>	<b>129</b>
4.1	Allotropic Modifications of Carbon	129
4.1.1	Diamond	129
4.1.2	Graphite	130
4.1.3	Fullerenes	131
4.1.4	Fullerenes with fused pentagonal faces	135
4.1.5	Amorphous carbon	137
4.1.6	Graphene	138
4.1.7	New planar $sp^2$ -hybridized carbon allotrope	139
4.1.8	Carbon nanotubes	141
4.1.9	Filled carbon nanotubes	142
4.2	Compounds of Carbon	145
4.2.1	Aliphatic compounds	145
4.2.2	Aromatic compounds	146
4.2.3	Fullerenic compounds	148
4.3	Bonding in Carbon Compounds	155
4.3.1	Types of bonds formed by the carbon atom	155
4.3.2	Coordination numbers of carbon	157
4.3.3	Bond lengths of C–C and C–X bonds	158
4.3.4	Factors influencing bond lengths	158
4.3.5	Abnormal carbon-carbon single bonds	161
4.3.6	Highly twisted polyhexacycles	163
4.3.7	Topological molecular nanocarbons: all-benzene catenanes and trefoil knot	164

4.3.8	Complexes containing a naked carbon atom	165
4.3.9	Carbon atom functioning as an electron-pair donor	166
4.3.10	Complexes containing naked dicarbon ligands	168
4.4	Gold and Silver Carbene Complexes	171
4.5	Phosphine-Sulfoxide Carbon(0) Complexes	173
4.6	Structural Chemistry of Silicon	176
4.6.1	Comparison of silicon and carbon	176
4.6.2	Metal silicides	178
4.6.3	Stereochemistry of silicon	179
4.6.4	Silicates	182
4.6.5	Square-planar silicon(IV) complex	186
4.7	Structures of Halides and Oxides of Heavier Group 14 Elements	187
4.7.1	Subvalent halides	187
4.7.2	Oxides of Ge, Sn and Pb	189
4.8	Polyatomic Anions of Ge, Sn, and Pb	190
4.9	Organometallic Compounds of Heavier Group 14 Elements	192
4.9.1	Cyclopentadienyl complexes	193
4.9.2	Sila- and germa-aromatic compounds	194
4.9.3	Cluster complexes of Ge, Sn, and Pb	194
4.9.4	Metalloid clusters of Sn	196
4.9.5	Donor-acceptor complexes of Ge, Sn, and Pb	197
4.9.6	Structure of germylene and stannylene compounds	200
4.10	Tetrel Bonding Interactions in Group 14 Compounds	201
4.10.1	$\sigma$ -Hole interactions and Si-Ge tetrel bonds (TrB)	201
4.10.2	Interactions involving tin	202
4.10.3	Interactions involving lead	203
4.10.4	Supramolecular assembly of Pb(II) compounds with tetrel bonding	204
4.11	Tetrylones: Monoatomic Zero-Valent Group 14 Compounds	206
