1	Preliminaries on Hilbert Spaces	1
1.1	The Hilbert Space Structure	1
1.2	Some Examples of Hilbert Spaces.....	3
1.3	Fundamental Properties	6
1.4	Subspaces	8
1.5	Orthogonal Subspaces.....	10
1.6	The Orthogonal Projection.....	13
1.7	Basis in a Hilbert Space.....	14
1.8	Linear Functions.....	19
1.9	Weak Convergence	25
1.10	Concluding Remarks	28
2	Operators in Hilbert Spaces	31
2.1	First Definitions	31
2.2	The Adjoint Operator	33
2.3	Resolvent Set and Spectrum	36
2.4	Selfadjoint Operators.....	39
2.5	Operators in Real Hilbert Spaces	42
2.6	Concluding Remarks	45
3	The Semilinear Problem	47
3.1	The Main Problem	47
3.2	Properties of the Differential Operator	49
3.3	The Linear Equation	52
3.3.1	The Case $\lambda > 0$	53
3.3.2	The Case $\lambda < 0$	56
3.3.3	Conclusions	57
3.4	The Contraction Theorem.....	57
3.5	Nonresonance: Existence and Uniqueness	59
3.6	Equations in Hilbert Spaces.....	61
3.7	Concluding Remarks	68

4	The Topological Degree	71
4.1	The Brouwer Degree	71
4.2	Further Considerations on the Brouwer Degree	87
4.3	The Leray–Schauder Degree.....	90
4.4	Concluding Remarks	98
5	Nonresonance and Topological Degree	101
5.1	The Use of Schauder Theorem	101
5.2	Lower and Upper Solutions	104
5.3	The Continuation Principle	108
5.4	Asymmetric Oscillators	111
5.5	Nonlinear Nonresonance	112
5.6	Non-bilateral Conditions	119
5.7	The Ambrosetti–Prodi Problem	129
5.8	Concluding Remarks	133
6	Playing Around Resonance	137
6.1	Some Useful Inequalities	137
6.2	Resonance at the First Eigenvalue	139
6.3	Landesman–Lazer: Resonance at Higher Eigenvalues	141
6.4	The Lazer–Leach Condition	144
6.5	Landesman–Lazer Conditions: The Asymmetric Case	145
6.6	Lazer–Leach Conditions for the Asymmetric Oscillator	149
6.7	More Subtle Nonresonance Conditions	151
6.8	Concluding Remarks	155
7	The Variational Method	157
7.1	Definition of the Functional	157
7.2	Minimization	161
7.3	The Ekeland Principle.....	164
7.4	The Search of Saddle Points	165
7.5	Concluding Remarks	171
8	At Resonance, Again	173
8.1	Resonance at the First Eigenvalue	174
8.2	Subharmonic Solutions	176
8.3	Ahmad–Lazer–Paul: Resonance at Higher Eigenvalues	181
8.4	Landesman–Lazer vs Ahmad–Lazer–Paul	184
8.5	Periodic Nonlinearities	187
8.6	Concluding Remarks	190
9	Lusternik–Schnirelmann Theory	193
9.1	The Periodic Problem for Systems	193
9.2	An Equivalent Functional	194
9.3	Some Hints on Differential Equations.....	197
9.4	Lusternik–Schnirelmann Category	199
9.5	Multiplicity of Critical Points	201

9.6	Relative Category	206
9.7	Concluding Remarks	211
10	The Poincaré–Birkhoff Theorem	213
10.1	The Multiplicity Result	214
10.2	A Modified System	215
10.3	The Variational Setting	218
10.4	Finite Dimensional Reduction	221
10.5	Periodic Solutions of the Original System	223
10.6	The Poincaré–Birkhoff Theorem on an Annulus	225
10.7	Concluding Remarks	227
11	A Myriad of Periodic Solutions	231
11.1	Equations Depending on a Parameter	231
11.2	Superlinear Problems	243
11.3	Forced Superlinear Equations	250
11.4	Concluding Remarks	253
A	Spaces of Continuous Functions	255
A.1	Uniform Convergence	255
A.2	Continuous Functions with Compact Domains	257
A.3	Uniformly Continuous Functions	258
A.4	The Ascoli–Arzelà Theorem	259
A.5	The Stone–Weierstrass Theorem	261
B	Differential Calculus in Normed Spaces	265
B.1	The Fréchet Differential	265
B.2	Some Computational Rules	267
B.3	The Mean Value Theorem	270
B.4	The Gateaux Differential	272
B.5	Partial Differentials	273
B.6	The Implicit Function Theorem	276
B.7	Higher Order Differentials	282
C	A Brief Account on Differential Forms	287
C.1	Preliminary Definitions	287
C.2	The External Differential	289
C.3	Pull-Back Functions	290
C.4	Integrating M -Differential Forms Over M -Surfaces	291
C.5	Differentiable Manifolds	292
C.6	Orientation	293
C.7	The Stokes–Cartan Theorem	294
	Bibliography	297
	Index	307
