XV

Lecture 2. Outlines of a Holonomic Brain Theory	25
Inception of the Formalism 25	
The Holoscape: Spacetime, Spectra and Quanta of Information 28	
The OCCAM Network and the Boltzmann Engine 32	
Energy, Entropy and Information 36 Summary 43	
PART 1: CONFIGURAL ASPECTS	
Lecture 3. Transformational Realism: The Optic Array, the Optical Image and the Retinal Process	47
Introduction: The What of Perceptual Processing 47	
The Optic Array 49	
The Optical Image and Optical Flow 52	4
Retinal Receptor Processes 54	
The How of Perceptual Processing 57	
A Computational Implementation 60 Summary 63	
	T U Z Z Z Z Z Z Z
Lecture 4. Imaging: Cooperativity in Primary Sensory Systems	65
Introduction 66	
An Experiment 67	
The Gabor Elementary Function 70	
Achieving the Transform 73	
Cortical Receptive Fields 74	
Classification of Receptive Field Properties 79	
Patterns of Activity in Populations of Receptive Fields 83	
Activating the Junctional Microprocess 85	
Features Extracted from Noise 88	
Achieving the Perceptual Image 89	
Conclusion and Summary 91	
Taskers & Ohisak Farmer and Ohisak Spaces	
Lecture 5. Object-Forms and Object Spaces:	03
Sensory-Motor Reciprocity	93
Introduction 93	
What is Processed in Achieving Constancy 95	
Figure and Ground in an Occulocentric Space: Striate-Peristriate-	
Tectal Circuitry 98	
Object Constancy in Object-Centered Spaces; Processing Size, Color	
and Shape in Prestriate-Pretectal Circuitry 100	

Centers of Symmetry and Reference Frames 106	
Group Theory 108	
Holonomic Transformations and Group Theory 110  Invariance and Reference Frames 112	
Computation in Joint Occulocentric and Object-Centered	
Frames 114	
The Processing Mode 115	
Invariance as Relative to Frame 118	
Conclusion and Summary 120	
Lecture 6. Images of Achievement and Action Spaces: Somatic	
Processes in the Control of Action	121
Introduction 121	
Somatomotor Controls: Spinal, Brain Stem, Basal Ganglia	
and Cerebellar 126	
Targets: The Computation of Somatomotor Constancies 133	
The Sensory Aspects of the Rolandic Motor Cortex 134	
Transforming Movement into Action 136	
Frequency Tuning 139	
Velocity and Length 141	
Position in the Movement Cycle 144	
A Vector Space: Force Defined in Terms of Load 145	
Images of Achievement 148	
Neglect and Apraxia: Disturbances in Body Image 149	
Skill vs. Praxis: A Rolandic vs. Extra-Rolandic Distinction 150	
The Corporeal Self as Reference Frame 154	
A Joint Visuosomatic Action Space 155	
C.,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	
The state of the s	
nosasson'i svituoezik en mittoli Lorentii met edil teon	
PART 11: COGNITIVE ASPECTS	
Lacture 7 Comprehension: Contributions of the Doctorion Conchaol	
Lecture 7. Comprehension: Contributions of the Posterior Cerebral Convexity in Enhancing Processing Span	165
Introduction 165 Some History 167	
Some mistory 107	
ochiotiy Discrimination 100	
11 Thermony of Meterment Mocesses 172	
The Non-Sensory Aspect of Sensory Mode Specificity 174	
Sensory Discriminations as Efficient Stimulus Sampling 174	
Efficient Stimulus Sampling as Signal Enhancement—Bias 177	
Bias in the Development of Prototypes and in Categorizing 178	

Central Processing vs. Behavior

	Central Selectives 193
	Conclusion 196
	Invariance and Reference Huges 112kg communication
	e 8. Familiarization and Valuation: The Contributions  Amygdala System to the Demarcation of an Episode 199
	Introduction 199
	The Amygdala System 200 The Boundaries of an Episode 201 A Disturbance of Perception 207
	Equi-valence: The Evaluation of Perceptions 208
	Protocritic Processing: A Hedonic Comfort-Discomfort  Dimension 208
	Familiarization as Consolidation of Memory, Dependent on Protocritic Processing 214
	Toward a Model for Episodic Processing 217
	e 9. Irrelevance and Innovation: The Contributions of the campus and Limbic Forebrain to the Processing of Context 221
	Introduction 221
	The Hippocampal System 222
	Cognitive Effort: Efficiency in Processing Novelty 223
	Relevance, Distraction and the Limbic Forebrain 226
	The Neurophsyiology of Relevance 230
	Toward a Model of Innovation 233
	A Joint Visuosomatic Action Space 155 Last miot A
Lectur	e 10. Envisioning Proprieties and Priorities; Practical
Infere	nce: The Far Frontal Cortex as Executive Processor 239
	Introduction: An Executive Processor 239 Anatomical Considerations 240
	The What, When, and How of Processing 242
	Kronos and Kairos: The Decisive Moment 243
165	Covariation and Episodic Coherence 244
	Interference 245
	Proprieties: Utilizing Context 247
	Priorities: The Best of Well Laid Plans 247
	Practicalities: Context-Content Relationships 248
	Modification of Processing Competence 255
	Envisioning Proprieties and Priorities: Toward a Model
	for Processing Serial Position 259
