
Table of Contents

Chapter 0. A Preview	1
Chapter 1. The Farey Diagram	20
1.1. The Mediant Rule	21
1.2. Farey Series	27
Chapter 2. Continued Fractions	33
2.1. Finite Continued Fractions	34
2.2. Infinite Continued Fractions	42
2.3. Linear Diophantine Equations	50
Chapter 3. Symmetries of the Farey Diagram	63
3.1. Linear Fractional Transformations	63
3.2. Translations and Glide Reflections	71
Chapter 4. Quadratic Forms	79
4.1. The Topograph	80
4.2. Periodicity	84
4.3. Pell's Equation	98
Chapter 5. Classification of Quadratic Forms	102
5.1. The Four Types of Forms	103
5.2. Equivalence of Forms	111
5.3. The Class Number	117
5.4. Symmetries of Forms	122
5.5. Charting All Forms	135

Chapter 6. Representations by Quadratic Forms	145
6.1. Three Levels of Complexity	145
6.2. Representations in a Fixed Discriminant	161
6.3. Genus and Characters	180
6.4. Proof of Quadratic Reciprocity	195
Chapter 7. The Class Group for Quadratic Forms	203
7.1. Multiplication of Forms	204
7.2. The Class Group for Forms	213
7.3. Finite Abelian Groups	220
7.4. Symmetry and the Class Group	232
7.5. Genus and Rational Equivalence	240
Chapter 8. Quadratic Fields	252
8.1. Prime Factorization	253
8.2. Unique Factorization via the Euclidean Algorithm	265
8.3. The Correspondence Between Forms and Ideals	277
8.4. The Ideal Class Group	306
8.5. Unique Factorization of Ideals	314
8.6. Applications to Forms	323
Tables	328
1. Forms of Negative Discriminant	328
2. Fully Symmetric Negative Discriminants	331
3. Forms of Positive Nonsquare Discriminant	332
4. Periodic Separator Lines	334
Nonstandard Terminology	336
Bibliography	338
Index	340
