

Presentation	9
--------------	---

Arctic area of the tundra and Antarctic dominion	13
---	-----------

1. Winter all year round	15
1.1 Permanent cold and half a year of darkness [A.M. Ghilarov]	17
1.1.1 The Arctic tundra, an extreme environment	17
Conditions related to latitude	17
The low temperatures and the wind	18
Limited precipitation and surface water	18
1.1.2 The seasonal cycle and the hyperboreal climate	18
The luminous but tepid summer	19
• The clearness of the night [A.M. Ghilarov]	20
The cold dark winter	24
1.2 Permanently frozen soils. [B. Vliet-Lanoë, R.M. Poch, J. Porta and A.M. Ghilarov]	25
1.2.1 The beginnings of knowledge of the tundra soil	25
Permafrost: the impermeability of frozen water	25
Freezing and melting: the molding of a changing microrelief	27
1.2.2 Soil processes	28
Physical weathering	28
Soil nutrients and biological activity	29
Humus formation	29
Cryogenic consolidation, illuviation, and solifluction	30
Differential raising, cryoturbation, and the geliexpansibility gradient	31
1.2.3 The types of soils	32
Organic soils or histosols	32
Hydromorphic soils or gleysols	33
Podzolization and the accumulation of carbonates and salts	33
1.3 The polar space of the tundra and the Arctic deserts [A.M. Ghilarov and J.M. Camarasa]	34
1.3.1 The hyperboreal lands	34
The tundra's latitudinal limits	34
The tundra and Arctic deserts	34
1.3.2 The geography of the tundra	35
The Scandinavian and Siberian tundra	35
The North American tundra	37
The Greenland tundra	38
2. Life in the tundra	39
2.1 The ecological functioning of the tundra. [V.N. Bolshakov and J.P. Martínez Rica]	41

2.1.1	The struggle for existence in adverse conditions	41
	The youth and immaturity of the tundra biome	41
	The gradient of biodiversity	41
	Fluctuations in environmental conditions	42
2.1.2	Sparse production and few consumers	43
	Modest biomass	43
	Production and recycling	43
2.2	The mycota, the flora and the plant cover [V.N. Bolshakov and J.P. Martínez Rica]	45
2.2.1	The biological types	45
	Lichens	45
	The typical mosses and the sphagnum mosses	47
	• The kingdom of the mosses [A. Garriga]	48
	Vascular plants	53
2.2.2	Adaptive strategies	54
	Defenses against cold and the wind	54
	The water economy	55
	Life-cycle adaptations	56
	Growth and reproduction	57
2.3	Fauna and animal life [V.N. Bolshakov and J.P. Martínez Rica]	58
2.3.1	Faunistic variety	58
	Birds	58
	Mammals	60
	Amphibians and reptiles	62
	Invertebrates and rhizopods	63
2.3.2	Adaptive strategies	64
	Morphophysiological adaptations	64
	Seasonality in diet	65
	Ethological adaptations	66
2.4	Life in rivers and lakes [A.M. Ghilarov and J.M. Camarasa]	68
2.4.1	The abundance and diversity of bodies of water	68
	Continental lakes and lagoons	68
	Rivers and streams	68
	Coastal lagoons	69
2.4.2	The aquatic organisms	69
	Primary producers	69
	The zooplankton	70
	The benthic fauna	71
	The fish fauna	71
	The ecological plasticity of the ichthyofauna	72
3	Humans in the tundra	73
3.1	Human settlement of the tundra [J.B. Simtchenko, C. Junyent and J.M. Camarasa]	75
3.1.1	The process of human occupation	75
	Hunters and reindeer herders in Eurasia	75
	Coastal hunters and fishers in North America	76
	The Vikings in Iceland and Greenland	76
	The Russians in the northern territories	77
3.1.2	The shared characteristics of the peoples of the tundra	79
	Physical characteristics	79
	The linguistic families	81
3.1.3	Humans in the western Eurasian tundra	81
	Linguistic vehicles	82
	The Samer peoples	82
	The Samoyed peoples	83

3.1.4	The humans of the eastern Eurasian tundra	84
	The languages	84
	The Altaic peoples	84
	The descendants of the first Russian settlements	86
	The unusual case of the Yukaghir	87
	The Chukchi and Eskimo-Aleutian peoples	87
3.1.5	The humans of the American and Greenland tundra	88
	The languages	88
	The Inuit peoples	88
	The Aleut peoples	91
	• The art of the snow [J.B. Simtchenko and R. Folch]	92
3.1.6	Health and illness in the tundra	96
	Hypothermia and freezing	96
	Vitamin deficiency due to lack of sunshine	96
	Infectious diseases	97
3.2	The use of plant and fungal resources [J.B. Simtchenko and J.M. Camarasa]	98
3.2.1	Gleaning instead of agriculture	98
	The scarce gleanings from wild plants	98
	The preparation of wild greens	99
3.2.2	The use of lichens and fungi	99
	Grazing on lichens	99
	Hallucinogenic mushrooms	99
3.3	The use of animal resources [J.B. Simtchenko and J.M. Camarasa]	100
3.3.1	Hunting activity	100
	Hunting of animals for their fur	100
	Hunting of animals for feathers	101
	The hunting of marine mammals	101
	• Eiderdown, a renewable resource [J. Maluquer, Á. Snæbjörnsson and R. Folch]	102
	Subsistence hunting of walrus and seal	106
	Hunting of cetaceans	108
3.3.2	Fishing activity	108
	River fishing	108
	Sea fishing	109
3.3.3	Stockraising activities	109
	The thousand uses of reindeer hide	109
	Reindeer and their herders	110
3.3.4	The case of the Arctic dogs	110
	• Packs in harness [J.B. Simtchenko and M. Comelles]	112
	Hunting dogs	116
	Herder dogs	116
	Draft dogs	116
3.4	Management conflicts and environmental problems [J.B. Simtchenko, V.N. Bolchakov, A.M. Ghilarov and J.M. Camarasa]	117
3.4.1	Ancient but intense human settlement	117
	Under the pole star	117
	The actions of the first large British companies	118
	The struggle for whale oil	119
	From the Urals to the Pacific	120
	The two-headed eagle in the New World	120
3.4.2	The modern increase in human impact	122
	The vulnerability of the soils	122
	Fire and overgrazing	122
	Pressure on the vegetation and the fauna	123
	Changes caused by physical and chemical pollution	123
3.4.3	Environmental questions in the Russian tundra	124
	The social and environmental impact of the Soviet regime	125
	Oil extraction and mining	126

3.4.4 The environmental question in the American and Greenland tundra	127
From one looter to another	127
A frontier too far	128
The case of Greenland	129
• The last penguins [C. Carboneras]	130
4. The protected areas and biosphere reserves in the tundra	135
4.1 The world's protected tundra [J. Culverwell]	137
4.1.1 General considerations	137
The weight of the past	137
The management of natural values	137
4.1.2 Parks and protected areas	138
The size of the protected areas	138
4.2 The UNESCO biosphere reserves in the tundra area [J. Culverwell and A. Rogers]	140
4.2.1 The biosphere reserves in the tundra	140
4.2.2 The biosphere reserves in the Eurasian tundra	141
4.2.3 The biosphere reserves in the North American tundra	141
The Noatak Biosphere Reserve	141
The Northeast Greenland Biosphere Reserve	145
5. The Antarctic domain	149
5.1 A frozen continent and sea [J. Calvet, M. Estrada, M.A. García and A. Ghilarov]	151
5.1.1 The Antarctic continent	151
An ancient rocky, icy fragment of Gondwana	151
The continental ice	151
The dynamics of the inlandis	153
5.1.2 The Antarctic waters and the sea ice	154
The water masses	154
Ocean dynamics	154
Ice fields	155
Ice shelves	157
5.2. Life on Antarctica and in the surrounding sea [M. Estrada, L. García Sancho, J.M. Gili and J.M. Camarasa]	158
5.2.1 The Antarctic seas: not so well supplied as formerly thought [M. Estrada and J.M. Gili]	158
The trophic webs	158
The phytoplankton	158
The zooplankton	161
Pelagic consumers	164
The pack ice communities	165
Benthic communities	166
Biogeochemical flows	170
5.2.2 The Antarctic continent; a frozen desert [L. García Sancho and J.M. Camarasa]	170
The almost total absence of vascular plants	170
Domination by lichens	171
Amphibious birds and mammals	174
• Reproducing below zero [M. del Castillo and R. Folch]	176
The invertebrates	180
5.3 The permanent human presence [C.R. Altaba]	181
5.3.1 The precarious nature of the Antarctic installations	181
Scientific bases	181
Settlement for strategic reasons	182
• The race to the south pole [C.R. Altaba]	184
5.3.2 A world natural park?	188
Opposing interests	188
The need to reconsider	189

1. Above it all	193
1.1 Upwards, towards the poles	[J.M. García-Ruiz] 195
1.1.1 The power of altitude	195
The concept of mountain	195
Altitudinal zones	195
1.1.2 Geological and geomorphological complexity	196
Orogenic movements	196
Rocky materials and the action of erosion	197
1.1.3 The climate in the mountain	199
Temperatures and wind	199
Precipitation: rainfall and snow	201
Sunshine and shade	202
Exposure to the dominant winds: to windward and leeward	202
The topography and microclimates	203
1.2 Incipient soils	[J.P. Legros, R.M. Poch, J. Porta and J.C. Védy] 204
1.2.1 Soil formation processes	204
The physical fragmentation of the substrate	204
Why rocks weather	205
The lateral circulation of water	205
The accumulation of organic matter	206
1.2.2 Soil types	206
The surface soils on slabs and rock	207
Soils on screes	207
Soils on moraines	208
Variation due to bedrock	208
1.3 The world's high mountains	[J.M. García-Ruiz] 211
1.3.1 The high mountain space	211
The origin of the mountain ranges	211
The world's great mountain systems	211
1.3.2 The high tropical mountains	211
The orogenic process	211
Climatic conditions	212
1.3.3 The Himalayas and the high mountains and plateaux of central Asia	212
The mountain formation process	213
Structural plurality	214
The climatic conditions	214
1.3.4 Mediterranean and Alpine high mountains	215
The orogenic process	215
Geomorphological shaping	215
Climatic conditions	216
1.3.5 The high mountain in the Americas	217
The orogenic process	217
The North and Meso-American Systems	217
The Andean system	219
The climatic conditions	219
2. Life in the high mountain	221
2.1 The ecological functioning of the high mountain	[J.P. Martínez Rica] 223

2.1.1	The downward movement of nutrients	223
	The constant export of resources and organisms	223
	The circulation of matter and energy	223
2.1.2	The top layers and discontinuities	224
	The variety of montane environments	224
	The uppermost zones: the high mountain tundra	225
2.1.3	Refugia and centers of differentiation	226
	Mountain endemics	226
	The consequences of the glaciations	228
2.2	The flora and plant life [J. Vigo]	229
2.2.1	Resisting the wind and under the snow	229
	The effects of wind and cold	229
	The danger of desiccation	230
	The protective effect of the snow	231
	The annual cycle	232
2.2.2	The altitudinal zones	233
	Convergences and divergences	234
	The highest layers in the Holarctic mountains	234
	The highest levels in the intertropical mountains	235
	The forest layers	235
2.3	The fauna and animal life [J.P. Martínez Rica]	237
2.3.1	Life in the mountains	237
	Adaptations to the cold, and temperature oscillations	237
	Adaptations to wind	239
	Adaptations to scarcity of oxygen	240
	Mobility on ledges and screes	240
2.3.2	Animal population dynamics and interactions	241
	Circadian rhythms	241
	The annual cycles	242
	The option of hibernation	243
	The variety of ecological niches	244
	The trophic webs	244
	• Gliding elegantly [A. Minelli and J. Maluquer]	246
2.4	Life in lakes and streams [J. Catalan]	251
2.4.1	Cold waters with low mineral levels	251
	The origin and formation of lakes and pools	251
	Lakes and pools	252
	Torrents and streams	252
2.4.2	The flora and fauna	253
	Life in river environments	253
	Life in lake environments	254
3.	Humans in the high mountain	257
3.1	Human settlement of the high mountains [C. Junyent]	259
3.1.1	The sparse permanent human presence	259
	Humans on the Tibetan plateaux	259
	Humans on the Andean plateaux	260
	• Isolated in the Caucasus [C. Junyent]	262
3.1.2	Human adaptations and illnesses in the mountains	266
	The human mountain type	266
	Physiological responses to oxygen scarcity	266
	Physiological responses to the cold	268
	Altitude sickness	268
	Reproductive disorders	268
3.2	The use of plant resources [M. Monasterio and V. Ramos]	269

3.2.1	The food value of the high mountain flora	[M. Monasterio]	269
	The high mountain, the cradle of food plants		269
	The Andes		270
	The mountains of eastern Africa.		271
3.2.2	Medicinal and stimulant plants	[M. Monasterio]	271
	Aconites and cinchonas.		271
	Coca and the opium poppy		271
3.2.3	The use of pastures	[M. Monasterio]	272
	The high "puna" in the tropical Andes		272
	The Alpine meadows of the temperate mountains		273
3.2.4	Agricultural activity	[M. Monasterio and V. Ramos]	274
	Mountain agriculture		274
	Tubers from the Andes: potatoes		275
	The Bolivian Andes		277
	• From abundance to misery	[M. Monasterio and R. Folch]	278
	The Nepalese Himalayas		282
	The mountains of eastern Africa.		283
3.3	The use of animal resources	[T. Lasanta, J.P. Martínez Rica and M. Molinillo]	284
3.3.1	Hunting and fishing	[J.P. Martínez Rica]	284
	Hunting activity		284
	Angling.		284
3.3.2	Stockraising	[T. Lasanta and M. Molinillo]	285
	Grazing strategies		285
	Extensive stockraising in the mountain.		286
	Variations on grazing in the mountains.		286
	• The best wool in the world.	[A. de Sostoa and X. Ferrer]	288
3.4	Management conflicts and environmental problems	[T. Lasanta, J.P. Martínez Rica, M. Molinillo and M.M. Price]	293
3.4.1	The delicate and marginal nature of the montane space	[T. Lasanta, J.P. Martínez Rica, M. Molinillo and M.M. Price]	293
	Bad management of water resources		293
	The decline of the fauna.		293
	The conflict between forestry and grazing.		295
	From marginality to integration		297
3.4.2	The damage caused by bad management.	[M.M. Price]	299
	Nepal: myths and dilemmas		299
	Colorado: from mining to skiing		300
	Hawaii: goats, soldiers, and tourists		301
	The Sudety: acid rain.		301
	The Swiss Alps: protection by the forest and protection of the forest		301
	• From fresh air to the smell of money.	[X. Campillo and A. Carabén]	302
4.	The high mountain protected areas and biosphere reserves.		307
4.1	The world's protected high mountain areas	[A. Rogers and J.M. Camarasa]	309
4.1.1	General considerations		309
	The unusual features of the protection of mountain areas		309
	Humans and the protection of the mountain		309
4.1.2	Protected areas and parks		311
4.2	UNESCO biosphere reserves in the high mountain environment	[A. Rogers, A. Rotondaro and J.M. Camarasa]	312
4.2.1	Biosphere reserves in the high mountain	[J.M. Camarasa]	312
4.2.2	Biosphere reserves in the high mountain in the Americas	[A. Rotondaro and J.M. Camarasa]	312
	The Laguna de Pozuelos Biosphere Reserve		312
4.2.3	Biosphere reserves in the African high mountain	[A. Rogers and J.M. Camarasa]	315
	The Mount Kenya Biosphere Reserve		316
4.2.4	The high mountain biosphere reserves in Asia	[A. Rogers and J.M. Camarasa]	319
	The Wolong Biosphere Reserve		319

1. Islands of water, islands of land	327
1.1 From isolation to insularity [R. Margalef, J.A. Alcover, C.R. Altaba and J.M. Camarasa]	329
1.1.1 Isolated systems [J.A. Alcover and J.M. Camarasa]	329
The concept of insularity	329
The geographic space of the isolated systems	329
1.1.2 Isolation and biological evolution [R. Margalef]	329
The fascinating behavior of isolated systems	330
The increase in diversity and the slowing down of dynamics	330
Evolutionary deadends and fluctuating environments	330
The MacArthur and Wilson model	332
1.1.3 Evolutionary phenomena [J.A. Alcover and C.R. Altaba]	332
Evolutionary and adaptive radiation	333
Convergent evolution	334
1.2 Isolated land: islands [J.A. Alcover and C.R. Altaba]	338
1.2.1 The planetary archipelago [J.A. Alcover and C.R. Altaba]	338
Continental islands and oceanic islands	338
The biological colonization process	339
The unusual features of island evolution	342
Extreme cases of isolation	346
1.2.2 Large isolated islands [J.A. Alcover and C.R. Altaba]	346
Madagascar: lemurs and chameleons	346
New Zealand: kiwis and giant worms	349
New Caledonia: araucarias and kagus	351
The Seychelles: a small, ancient isolated world	352
• Coco de mer [R. Folch]	354
1.2.3 The intercontinental megaarchipelagoes [J.A. Alcover]	358
The Mediterranean islands' great diversity of lizards	358
The Antilles: lizards, hutias, and alamiquis	358
Wallacea: rats, mice, and tarsiers	360
1.2.4 The large oceanic archipelagoes [J.A. Alcover]	361
The Canary Islands: malpaís rats and laurel-forest pigeons	361
The Hawaii Archipelago: finches, fruit flies and snails	362
The Galápagos Islands: tortoises, iguanas, and finches	363
• The finches of the Galápagos Islands [X. Ferrer, A. de Sostoa and R. Folch]	364
1.3 Islands of water: lakes [R. Margalef]	369
1.3.1 Miniature seas	369
Glacial erosion lakes	369
Volcanic lakes	370
Tectonic lakes	370
Endorheic lakes	371
1.3.2 The ecological functioning of lakes	371
The chemical composition of the waters	371
• New lakes, old systems [R. Guerrero]	372
The heat regime and fertility	376
Life in lakes	378
2. Caves and sinks	379
2.1 Isolated subterranean cavities [A. Ginés]	381
2.1.1 The processes leading to the formation of caves and sinks	381
Karst development	381
The factors conditioning karstic erosion	381

2.1.2	The results of karstic phenomenon	382
	Karstic forms	382
	The dynamics of karst development	382
2.2	Life underground [D. Jaume]	384
2.2.1	The hypogeal environment	384
	The diversity of underground habitats	384
	The terrestrial hypogeal environment	385
	The aquatic hypogeal environment	386
	The surface hypogeal environment	388
2.2.2	The ecological functioning of the hypogeal environment	389
	The food web	390
	The adaptations of cave-dwelling organisms	392
2.2.3	The colonization of the hypogeal environment	393
	The terrestrial hypogeal environment	394
	The aquatic hypogeal environment	395
3.	Humans in isolated systems	397
3.1	Humans and the phenomena of insularity [C. Junyent]	399
3.1.1	Genetic factors associated with insularity	399
	Genetic drift	399
	The founder effect	399
	Consanguinity	400
	Racial and cultural mixing	401
3.1.2	Human uses of lakes and caves	402
	Humans on the shores of lakes	402
	Humans in caves	402
3.2	Human settlement of islands [C. Junyent]	403
3.2.1	The settlement of Australia and the Pacific islands	403
	The effect of isolation and racial mixing	403
	The population's origins in Sundaland and Sahulland	404
	The settlement of Australia	405
	The settlement of New Guinea and Melanesia	406
	The Polynesian wave of settlers	407
	Easter Island and Madagascar	408
3.2.2	Europe's isolated insular populations	409
	Sardinia	410
	Iceland	410
3.2.3	The settlement of the Antilles	411
	The first waves of immigration	411
	The arrival of the Europeans and Africans	411
3.2.4	Illness and health on islands	412
	Parasitic illnesses in Oceania	412
	Other infectious diseases in Oceania	413
	• The curse of Tutankhamen [C. Junyent]	414
3.3	Island-related environmental, management and usage conflicts [P.G. d'Ayala, J. Catalan and M. Comelles]	418
3.3.1	The many different images of islands [P.G. d'Ayala]	418
	Island paradises and island hells	418
	The risks of living on islands	419
	The limitations and opportunities of the island environment	420
	Tourism as a resource	421
3.3.2	The multiple uses of lakes [J. Catalan and M. Comelles]	423
	Fishing	424
	Pisciculture	425
	Water supply and the generation of hydroelectricity	425
	• Tenochtitlán [R. Folch]	426
	Tourist exploitation	430

3.4 Worlds that are going extinct	[J.A. Alcover, J. Catalan, M. Comelles and R. Margalef]	431
3.4.1 The current island biotas	[J.A. Alcover]	431
Evidence of their thriving past		431
The loss of the top predators		432
Mass extinctions		433
3.4.2 The fragile lake biotas	[J.A. Alcover, J. Catalan, M. Comelles and R. Margalef]	433
The transformation of the stocks of wildlife		433
Eutrophication		434
Acidification		435
4. The protected areas and biosphere reserves in isolated systems		437
4.1 The world's protected isolated systems	[J.M. Camarasa]	439
4.1.1 General considerations		439
4.1.2 Protected parks and areas		439
4.2 UNESCO Biosphere Reserves in isolated systems	[A. Rogers and J.M. Camarasa]	440
4.2.1 Biosphere Reserves on islands		440
The Galápagos Islands Biosphere Reserve		441
4.2.2 Lake biosphere reserves		447
The Lake Baikal Biosphere Reserve		447
Bibliography		453
Indexes		457
Species' index		459
Thematic index		469
