

Contents

Preface	xi
Chapter 1 Introduction to Dimension	
§1. Overview	1
§2. Basic Notation for Partially Ordered Sets	2
§3. Dilworth's Chain Covering Theorem	7
§4. Extensions and Realizers	9
§5. Standard Examples	12
§6. Alternating Cycles	14
§7. Dimension and Width	18
§8. Interpolation and Lifting	21
§9. Removal Theorems and Continuity	21
§10. Lexicographic Sums and Hiraguchi's Inequality	23
§11. Complements of Antichains	26
§12. Reversing Critical Pairs	29
Chapter 2 Crowns, Splits, Stacks, Sums, and Products	
§1. Overview	33
§2. Generalized Crowns	34
§3. Cartesian Products	38
§4. Bipartite Posets	46
§5. Splits and Quasi-Realizers	48
§6. Stacks and Splits	51
§7. Kelly's Dimension Products	53
§8. Exponents and Distributive Lattices	54
Chapter 3 Characterization Problems for Posets, Lattices, Graphs, and Families of Sets	
§1. Overview	57
§2. Comparability Graphs and Gallai's Theorem	58
§3. The 3-Irreducible Posets—Trotter and Moore's Method	62
§4. Planar Posets and Planar Aographs	66
§5. Planar Lattices	69
§6. The 3-Irreducible Posets—Kelly's Method	77
§7. Stacks and 3-Interval Irreducible Posets	81

§8.	Interval Graphs and Interval Orders	86
§9.	Linear and Interval Families of Sets	88
§10.	Boxes in \mathbb{R}^t	90
§11.	Circular Arc Graphs	92
§12.	Characterizing Inequalities	93
Chapter 4 Hypergraph Coloring, Computational Complexity, and Irreducible Posets		
§1.	Overview	97
§2.	Hypergraph Coloring	98
§3.	Irreducible Posets	102
§4.	Embedding Posets and Kelly's Dimension Products	108
§5.	Counting Irreducible Posets	112
Chapter 5 Planar Posets and Trees		
§1.	Overview	113
§2.	Planar Posets with a Zero	114
§3.	Planar Posets with Arbitrary Dimension	118
§4.	Repeated Splits and Amalgamations	119
§5.	Chordal Graphs and Cycle-Free Posets	122
Chapter 6 Planar Graphs, Planar Maps, and Convex Polytopes		
§1.	Overview	127
§2.	Schnyder's Dimension Theoretic Test for Planarity	128
§3.	Convex Polytopes	132
§4.	Normal Families of Paths	135
§5.	Constructing Normal Families of Paths	142
§6.	Convex Polytopes and Irreducible Posets	149
§7.	Planar Multigraphs	151
Chapter 7 Probabilistic Methods in Dimension Theory		
§1.	Overview	157
§2.	Subposets of the Subset Lattice	158
§3.	Posets of Bounded Degree	165
§4.	The Füredi/Kahn Bounds	166
§5.	Random Bipartite Posets	168
§6.	Upper Bounds	169
§7.	Lower Bounds	171
§8.	The Dimension of a Random Labeled Poset	181
§9.	Winkler's Model for Random Posets	186

Chapter 8 Interval and Geometric Containment Orders

§1. Overview	189
§2. Interval Orders and Semi-orders	190
§3. Dimension Theory for Semi-orders and Interval Orders	196
§4. Shift Graphs	197
§5. Ramsey Trails	201
§6. Interval Dimension	202
§7. Containment Orders	204
§8. Degrees of Freedom	209
§9. Circle Orders and Sphere Orders	210

Chapter 9 Greedy Dimension, Back-Tracking, and Depth First Search

§1. Overview	213
§2. The Jump Number Problem	214
§3. Algorithms for Linear Extensions	215
§4. Inequalities for Greedy Dimension	217
§5. Partitions and Constructions	224
§6. Super-Greedy Extensions, Back-Tracking, and Depth First Search	235

Chapter 10 Products of Chains of Bounded Length

§1. Overview	247
§2. Embedding Posets in Cubes	247
§3. Matchings in Posets	249
§4. Removal Theorems for k -Dimension	251
§5. Ramsey Theory for Posets	256
§6. The Maximum Dimension of a Lattice	258

Chapter 11 Large Minimal Realizers

§1. Overview	261
§2. Minimal Realizers and Critical Digraphs	261
§3. Applications of the Rank Reformulation Theorem	268
§4. Generalizing Turán's Theorem	270
Appendix	285
Bibliography	287
Index	301
