1 Introduction 1
- 1.1 About This Book 1
- 1.2 About Python 2
- 1.3 Installing Python 3
- 1.4 Code Editors 4

2 Basic Python Usage 6
- 2.1 Python as a Calculator 6
- 2.2 Defining Numbers 10
- 2.3 Variables 11
- 2.4 Limitations and Pitfalls 13
- 2.5 Examples 14
- 2.6 Exercises 20

3 Strings 22
- 3.1 Defining Strings 22
- 3.2 String Indexing and Slicing 24
- 3.3 String Methods 26
- 3.4 String Formatting 27
- 3.5 Examples 28
- 3.6 Exercise 30

4 Lists and Loops 31
- 4.1 Definitions, Syntax and Usage 31
- 4.2 `range` and `enumerate` 33
- 4.3 Creating `lists` 34

4.4 `split` and `join` 34
4.5 `zip` 35
4.6 Examples 36

5 Comparisons and Flow Control 41
5.1 Comparisons and Logic 41
5.2 `if ... elif ... else` 43
5.3 `while` loops 44
5.4 More Control Flow: `break`, `continue` and `pass` 44
5.5 Exceptions 45
5.6 Examples 47
5.7 Exercises 53

6 Functions 54
6.1 Defining Functions 54
6.2 Keyword and Default Arguments 55
6.3 Docstrings 56
6.4 Scope 57
6.5 `lambda` (Anonymous) Functions 59
6.6 Examples 61

7 Data Structures 64
7.1 Lists 64
7.2 Tuples 67
7.3 Sets 68
7.4 Dictionaries 70
7.5 Examples 72
7.6 Exercises 75

8 File Input/Output 76
8.1 Writing Files 76
8.2 Reading Files 77
8.3 Character Encoding 78
8.4 Example 79
8.5 Exercises 80

9 Basic NumPy 82
9.1 Creating NumPy Arrays 82
9.2 Indexing and Slicing NumPy Arrays 87
9.3 NumPy Array Aggregation 89

9.4 NaN: Not a Number 91
9.5 Boolean Arrays and Indexing 91
9.6 Reading Data Files into a NumPy Array 92
9.7 Examples 95
9.8 Exercises 99

10 Graph Plotting with Matplotlib 102
10.1 Line Plots and Scatter Plots 102
10.2 Examples 108
10.3 Exercise 113

11 The Steady-State Approximation 114

12 Liquid–Vapor Equilibrium 118

13 Jupyter Notebook 122
13.1 Jupyter Notebook Basics 122
13.2 Markdown Cells in Jupyter Notebook 125

14 LaTeX 134
14.1 Mathematics with LaTeX 134
14.2 Chemical Equations 143
14.3 Example 144

15 Chemistry Databases and File Formats 147
15.1 Formats 147
15.2 Online Services 154
15.3 Example 156
15.4 Exercises 162

16 More NumPy and Matplotlib 163
16.1 NumPy 163
16.2 Physical Constants (SciPy) 172
16.3 More Matplotlib 174
16.4 Example 181

17 Thermodynamic Cycles 184
17.1 Internal Energy and the First Law 184
17.2 Example 187
17.3 Exercise 189

18 Vectors, Matrices and Linear Algebra 191
18.1 NumPy Arrays as Vectors 191
18.2 NumPy Arrays as Matrices 193
18.3 Linear Algebra 197
18.4 Examples 202
18.5 Exercises 211

19 Linear Least Squares Fitting I 213
19.1 Background 213
19.2 Fitting a Line of Best Fit 215
19.3 `numpy.linalg.lstsq` 216
19.4 Examples 218
19.5 Exercises 227

20 Linear Least Squares Fitting II 229
20.1 Parameter Uncertainties 229
20.2 Example 230
20.3 Exercises 233

21 Numerical Integration 236
21.1 Integrals of a Single Variable 236
21.2 Integrals of Two and Three Variables 237
21.3 Examples 240
21.4 Exercise 246

22 Optimization with `scipy.optimize` 247
22.1 Multivariate Minimization and Maximization 247
22.2 Univariate Minimization and Maximization 250
22.3 Example 252
22.4 Exercises 258

23 Vibrational Spectroscopy 260
23.1 The Harmonic Oscillator Model 260
23.2 Example 261
23.3 Exercise 266

24 The Morse Oscillator 267
24.1 Example 268

25 Solving Ordinary Differential Equations 272
25.1 A Single First-Order ODE 272
25.2 Coupled First-Order ODEs 275
25.3 A Single Second-Order ODE 277
25.4 Example 279

26 The Oregonator 282
26.1 Theory and Analysis 282
26.2 Exercise 289

27 Root-Finding with `scipy.optimize` 291
27.1 Root-Finding Algorithms 291
27.2 Example 295

28 Rotational Spectroscopy 300
28.1 Diatomic Molecules: The Rigid Rotor 300
28.2 Centrifugal Distortion 305
28.3 Polyatomic Molecules 308

29 Peak Finding 315
29.1 Simple Peak-Finding 315
29.2 `scipy.signal.find_peaks` 318
29.3 Example 322

30 Fitting the Vibrational Spectrum of CO 325
30.1 Analyzing a Rovibrational Spectrum 325
30.2 Fitting the Spectrum 329

31 pandas 333
31.1 `Series` 333
31.2 `DataFrame` 338
31.3 Reading and Writing `Series` and `DataFrames` 346
31.4 Examples 348
31.5 Exercise 358

32 Simulating a Powder Diffraction Spectrum 360

33 The Hückel Approximation 367
33.1 Theory 367
33.2 Examples 369
33.3 Exercises 376

34 Nonlinear Fitting and Constrained Optimization 378
34.1 `scipy.optimize.least_squares` 378
34.2 `scipy.optimize.curve_fit` 379
34.3 `scipy.optimize.minimize` with Constraints 379
34.4 Examples 381
34.5 Exercises 395

35 SymPy 397
35.1 Algebra and Mathematical Functions 398
35.2 Equation Solving 403
35.3 Calculus 407
35.4 Example 413
35.5 Exercises 418

36 Molecular Orbital Theory for H_2^+ 420

37 Approximations of the Helium Atom Electronic Energy 429
37.1 Theory 429
37.2 Attempt 1: Ignore Electron–Electron Repulsion 430
37.3 Attempt 2: One-Parameter Variational Approach 431
37.4 Attempt 3: Hartree–Fock with a Minimal Basis 433

38 Computational Chemistry with Psi4 and Python 442
38.1 Installing Psi4 442
38.2 Examples 442
38.3 Exercise 455

39 Atomic Structure 457
39.1 One-Electron Atoms 457
39.2 Many-Electron Atoms 468

40 Solutions 479

Index 541
