1 Introduction

What is marketing analytics about?	2
Getting started with R	9
Importing data to R	23
Chapter summary	26
References	26
Further reading	27

2 Customer Segmentation

Case study: Stratton AE Banking	30
Customer segmentation as a core function of marketing management	32
Segmentation approaches and criteria	34
Distance as a measure of similarity	36
k-means cluster analysis	38
Chapter summary	56
References	56

3 Marketing Mix Modelling

Case study: FourTex	58
Marketing mix modelling approach	60
Model application with R	62
Chapter summary	88
References	89
Appendix	90

4 Attribution Modelling	91
Case study: KNC	92
Introduction	94
Overview of attribution models	96
Model applications with R	101
Chapter summary	120
References	121
Appendix	122
5 User-Generated Data Analytics	135
Case study: Leviev Air I	136
The potential of user-generated data	137
Deriving a positioning strategy with the help of UGD	138
Understanding the airline choice process with Google Trends data	139
Enriching insights with the help of airline reviews: a crawling exercise	147
Chapter summary	162
References	163
6 Customer Mindset Metrics	165
Case study: Zanten shampoo	166
Customer mindset metrics	169
Model application with R	172
Chapter summary	192
References	193
7 Text Mining	195
Case study: Leviev Air II	196
The power of text	197
Applications of text mining in marketing	197
Chapter summary	231
References	232
8 Churn Prediction and Marketing Classification Models with Supervised Learning	233
Case study: Logi.Tude	234
Customer churn and reacquisition	236
Machine learning and classification models	237
Logistic regression models	239
Decision tree models	246
Chapter summary	252
References	252

9 Demand Forecasting	255
Case study: Silverline	256
What is demand forecasting?	257
Demand forecasting approaches	258
Model applications with R	274
Chapter summary	297
References	298
Appendix	300
10 Image Analytics	303
Introduction	304
Marketing applications of image analytics	306
Neural networks	308
Convolutional neural networks	314
Model application in R	321
Chapter summary	341
References	342
11 Data Project Management and General Recommendations	345
Data analytics project stages and issues	346
Data storage and database management	348
Data suitability and data handling	350
Data quality	353
Computational power and parallelization of tasks	355
Data storytelling and visualization	356
Implementation of analysis results in marketing practice	357
Critically assess the ethical dimensions of your data analysis	359
Chapter summary	360
References	361
<i>Index</i>	363
