List of contributors	xi
1. Self-assembled monolayer–based nanoscaled surfaces	1
<i>Faezeh Ghorbanizamani, Emine Guler Celik, Hichem Moulahoum and Suna Timur</i>	
1.1 Self-assembled monolayers	1
1.2 Self-assembled monolayers based on thiolates	2
1.3 Self-assembled monolayers based on polymers	7
1.4 Self-assembled monolayers based on dendrons	9
1.5 Self-assembled monolayers based on lipids	11
1.6 Self-assembled monolayers based on peptides	14
1.7 Conclusion	17
References	17
2. Micro/nanomotors: recent applications	27
<i>Sinem Evli, Murat Uygun, Baha Öndeş and Deniz Aktaş Uygun</i>	
2.1 History of micro/nanomotors	27
2.2 Classification of micro/nanomotors, their functionalization and modification	28
2.3 Actuation and motion control types	30
2.3.1 Chemically powered micro/nanomotors	31
2.3.2 Light-driven micro/nanomotors	33
2.3.3 Magnetic field–controlled micro/nanomotors	33
2.3.4 Acoustic field–controlled micro/nanomotors	34
2.4 Applications of micro/nanomotors	35
References	39
3. Nanoscale physics of electrochemistry	43
<i>Saniye Soylemez, Sevinc Kurbanoglu and Filiz Kuralay</i>	
3.1 Introduction	43
3.2 Nanotechnology for electrochemistry	45
3.3 Biophysical sensors	49
3.4 Biomolecule-based interactions and their electrochemical evaluation	55

3.4.1	DNA–drug interaction	55
3.4.2	DNA-labeled redox probe interaction	56
3.4.3	Peptide–nucleic acid interaction	59
3.4.4	Enzyme–drug interaction	60
3.4.5	Protein–protein interaction	62
3.5	Conclusion	63
	Acknowledgments	63
	References	64
4.	Nanomotor technologies developed for cell-based nanoscale transport phenomena and mechanism	73
	<i>Sezin Eren Demirbuken, Bora Garipcan and Filiz Kuralay</i>	
4.1	Introduction	73
4.2	Drug delivery and nanomotors	75
4.3	Intracellular transport and nanomotor	79
4.4	Conclusion	86
	Acknowledgments	87
	References	87
5.	Molecularly imprinted polymer nanoparticles: solid-phase synthesis and molecularly imprinted nanoparticle assay	93
	<i>Cem Esen and Francesco Canfarotta</i>	
5.1	Introduction	93
5.2	Solid-phase synthesis of molecularly imprinted polymer nanoparticles	96
5.2.1	Activation of glass beads	96
5.2.2	Silanization of glass beads	97
5.2.3	Template immobilization onto a solid support	97
5.2.4	Polymerization	98
5.2.5	Separation of molecularly imprinted polymer nanoparticles	99
5.3	Molecularly imprinted nanoparticle assay	99
5.3.1	Molecularly imprinted polymer nanoparticles in pseudo-enzyme-linked immunosorbent assays	99
5.4	Conclusion	103
	References	103
6.	Molecular imprinting on the nanoscale rapid detection of cells	107
	<i>Neslihan Idil, Sevgi Aslıyüce, Işık Perçin and Bo Mattiasson</i>	
6.1	Introduction	107
6.2	Molecular imprinting	110

6.2.1	Fundamentals of molecular imprinting	110
6.2.2	Molecular imprinting strategies	111
6.3	Detection	114
6.3.1	Nano-molecularly imprinted polymers	114
6.3.2	Sensing	114
6.4	Applications of cell detection	115
6.4.1	Mammalian cell detection	115
6.4.2	Microbial cell detection	117
6.5	Conclusion and future perspectives	125
	References	126
7.	Nanomachines and their biomedical applications	131
	<i>Huma Shaikh, Mehrunnisa Koondhar and Najma Memon</i>	
7.1	Nanoparticles and their biomedical applications	132
7.2	Nanofibers and their biomedical applications	135
7.3	Carbon-based nanomaterials and their biomedical applications	137
7.4	Conclusion	143
	References	144
8.	Monolithic column based capillary- and nano-liquid chromatography applied to protein separation	151
	<i>Büşra Beltekin, Cemil Aydoğan, Sarah Alharthi and Ziad El Rassi</i>	
8.1	Introduction	151
8.2	Capillary- and nano-LC	152
8.3	Monolithic columns	154
8.4	Separation of proteins using nanomonoliths in various chromatography modes by nano-LC	154
8.4.1	Reversed phase (RP) chromatography	159
8.4.2	Affinity chromatography	160
8.4.3	Ion-exchange chromatography	160
8.5	Conclusion	162
	References	163
9.	Interferometric reflectance imaging sensor for diagnosis and therapy	167
	<i>Monireh Bakhshpour-Yucel, Sinem Diken-Gür, Iris Çelebi, Mete Aslan, Neşe Lortlar Ünlü and M. Selim Ünlü</i>	
9.1	Introduction	167
9.2	Interferometric reflectance imaging sensor	168
9.2.1	Surface chemistry of interferometric reflectance imaging sensor chips	169
9.2.2	Data collection, image analysis, and data processing	170

9.3	Interferometric reflectance imaging sensor—utilized low magnification—label-free measurement of biomass accumulations and detection principles	172
9.3.1	Applications of high-throughput, label-free measurement of biomass accumulations with interferometric reflectance imaging sensors	174
9.4	Single-particle interferometric reflecting imaging sensor—digital detection of single nanoparticles and kinetic measurements of nanoparticle binding and detection principles	175
9.5	Conclusion	180
	References	180
10.	Atomic force microscopy and scanning tunneling microscopy of live cells	183
	<i>Erkut Yılmaz, Erdoğan Özgür, Semra Akgönüllü, Merve Asena Özbek, Nilay Bereli, Handan Yavuz and Adil Denizli</i>	
10.1	Introduction/basic concepts of scanning probe microscopy	183
10.2	Principles of SPM	185
10.2.1	Scanning tunneling microscopy	185
10.2.2	Atomic force microscopy	186
10.2.3	Different SPM modes and uses in the cell imaging	186
10.3	Basic parts of an AFM specialized for cell imaging	188
10.3.1	Chemical functionalization and coupling with biomolecules of AFM probes	190
10.3.2	Substrate materials and sample fixation	190
10.4	Sensing applications	193
10.4.1	Cell detection and hybrid measurements for biological samples	193
10.5	Future aspects	198
	References	198
11.	Nanomolecular imprinted templates for virus detection	203
	<i>Yeşeren Saylan, Zeynep Gerdan, Merve Çalışır and Adil Denizli</i>	
11.1	Introduction	203
11.2	Molecular imprinting method	204
11.2.1	History	204
11.2.2	Molecularly imprinted polymers	205
11.2.3	Types of molecular imprinting methods	206
11.2.4	Components of molecularly imprinted polymers	207
11.3	Nanomaterial-based sensors	209
11.3.1	Electrochemical sensors	210
11.3.2	Piezoelectric sensors	210
11.3.3	Optical sensors	211

11.4	Applications of virus-imprinted sensors	211
11.4.1	Ebola virus detection	212
11.4.2	Dengue and Zika virus detection	212
11.4.3	Hepatitis virus detection	214
11.4.4	Human immunodeficiency virus detection	216
11.4.5	Influenza virus detection	217
11.4.6	Coronavirus detection	217
11.5	Conclusion and future perspectives	219
	References	221
12.	Nanodevices and nanomachines at the nanoscale biophysics	233
	<i>Semra Akgönüllü, Duygu Çimen, Ilgım Göktürk, Gaye Ezgi Yılmaz, Fatma Yılmaz and Adil Denizli</i>	
12.1	Introduction	233
12.2	The approaches for creating nanodevices	234
12.2.1	Top-down approach	234
12.2.2	Bottom-up approach	239
12.3	Plasmonics	240
12.3.1	Nanooptics and subdiffraction-limited imaging	241
12.3.2	Optical molecular switches	241
12.4	Nanodevices used in nanomedicine	242
12.4.1	Drug release	242
12.4.2	Cell	244
12.4.3	Diagnostic	245
12.4.4	Cancer	246
12.5	Imaging and spectroscopic techniques	248
12.5.1	Spectroscopic techniques	251
12.6	Nanomachines	252
12.7	Conclusions	255
	References	255
