

Contents

1. INTRODUCTION.....	1
1.1 Recent Advances of Optical Imaging Theory.....	1
1.2 Overview of the Book.....	3
References.....	5
2. DIFFRACTION THEORY.....	7
2.1 Huygens-Fresnel Principle.....	7
2.1.1 Description of Diffraction.....	7
2.1.2 Fraunhofer and Fresnel Diffraction.....	8
2.1.3 Mathematical Expression for the Huygens-Fresnel Principle.....	9
2.2 Kirchhoff Scalar Diffraction Theory.....	11
2.2.1 Green's Functions.....	11
2.2.2 Kirchhoff Diffraction Integral.....	12
2.2.3 Kirchhoff Boundary Conditions.....	13
2.2.4 Fresnel-Kirchhoff Diffraction Formula.....	14
2.3 Rayleigh-Sommerfeld Diffraction Theory.....	15
2.3.1 First Rayleigh-Sommerfeld Diffraction Integral.....	16
2.3.2 Second Rayleigh-Sommerfeld Diffraction Integral.....	17
2.3.3 Debye Approximations.....	19
2.4 Paraxial Approximation.....	19
2.4.1 Fresnel Approximation.....	19
2.4.2 Fraunhofer Approximation.....	21
2.5 Fresnel Diffraction by Different Apertures.....	22
2.5.1 Circular Aperture.....	22
2.5.2 Circular Disk.....	26
2.5.3 Serrated Aperture.....	28
2.5.4 Doughnut Aperture.....	31
References.....	35
3. POINT SPREAD FUNCTION ANALYSIS.....	37
3.1 Transmittance of a Single Lens.....	37
3.2 Diffraction by a Lens.....	40
3.2.1 Circular Lens.....	42
3.2.2 Annular Lens.....	47

3.2.3 Doughnut Lens.....	49
3.3 Coherent Image Formation	50
3.3.1 Lens Law.....	53
3.3.2 Defocus Effect.....	56
3.3.3 Abbe Imaging Theory	57
3.4 Space-Invariant Property	62
3.5 Incoherent Image Formation.....	67
References.....	69
4. TRANSFER FUNCTION ANALYSIS.....	71
4.1 Introduction to Transfer Functions	71
4.2 Coherent Transfer Function	76
4.3 Optical Transfer Function	79
4.3.1 Circular Lens.....	81
4.3.2 Annular Lens.....	85
4.4 Projections and Sections of Three-Dimensional Transfer Functions	86
4.4.1 Thick Planar Objects.....	86
4.4.2 Thin Objects.....	87
4.4.3 Line Objects	88
4.4.4 Point Objects.....	90
4.5 In-Focus and On-Axis Transfer Functions	90
4.5.1 In-Focus Transfer Functions	91
4.5.2 On-Axis Transfer Function	93
4.6 Comparison between Coherent and Incoherent Imaging.....	95
4.7 Principle of Spatial Filtering and Applications.....	97
4.7.1 Image of a Sinusoidal Grating	99
4.7.2 Phase Contrast Imaging	101
4.7.3 Optical Data Processing.....	102
4.7.4 Other Spatial Filters	105
References.....	107
5. IMAGING WITH AN ULTRASHORT PULSED BEAM.....	109
5.1 Generation of an Ultrashort Pulsed Beam	109
5.2 Temporal and Spectral Distributions of an Ultrashort Pulsed Beam.....	112
5.3 Diffraction under Pulsed Beam Illumination.....	115
5.3.1 Circular Aperture	115
5.3.2 Circular Disk.....	119
5.3.3 Serrated Aperture	121
5.4 Effect of Material Dispersion on Lens Transmittance.....	124
5.5 Point Spread Function for a Thin Lens.....	126
5.5.1 Effect of Chromatic Aberration	126
5.5.2 Methods for Reducing Chromatic Aberration	130
5.5.3 Time-Dependent Image of a Single Point.....	131

5.6	Transfer Functions for a Thin Lens	133
5.6.1	Coherent Transfer Function	133
5.6.2	Optical Transfer Function	137
	References	142
6.	IMAGING WITH A HIGH NUMERICAL-APERTURE OBJECTIVE	143
6.1	Effects of a High Numerical-Aperture Objective	143
6.2	Debye Theory	145
6.2.1	Debye Approximations	145
6.2.2	Debye Integral for a Circular Lens	147
6.2.3	Paraxial Approximation	150
6.3	Apodization Functions	151
6.3.1	Sine Condition	152
6.3.2	Herschel Condition	155
6.3.3	Uniform Projection Condition	156
6.3.4	Helmholtz Condition	156
6.4	Transfer Functions	157
6.4.1	Coherent Transfer Function	157
6.4.2	Optical Transfer Function	160
6.5	Vectorial Debye Theory	163
6.5.1	Vectorial Debye Integral	163
6.5.2	Vectorial Point Spread Function at the Focus	165
6.6	Vectorial Point Spread Function through Dielectric Interfaces	169
6.6.1	One Dielectric Interface	170
6.6.2	Multi-Dielectric Interfaces	174
	References	176
7.	IMAGING WITH ABERRATION	177
7.1	Diffraction Integral with Aberration	177
7.1.1	Debye Integral in the Presence of Aberration	177
7.1.2	Strehl Intensity	180
7.2	Expansion of Aberration Functions	181
7.2.1	Displacement Theorem	181
7.2.2	Zernike's Circle Polynomials	181
7.3	Primary Aberrations	182
7.3.1	Definition of Primary Aberrations	183
7.3.2	Representation of Primary Aberrations	183
7.3.3	Diffraction Patterns in the Presence of Primary Aberrations	188
7.4	Tolerance Conditions for Primary Aberrations	190
7.4.1	Rayleigh's Quarter Wavelength Rule	191
7.4.2	Marechal Criterion	191
7.5	Aberration Caused by Refractive-Index Mismatch	192
7.5.1	Spherical Aberration Caused by a Dielectric Interface	192

7.5.2 Spherical Aberration Caused by a Cover Slip 195
 7.6 Spherical Aberration Caused by a Change in Tube Length of an Objective 196
 References 198

Appendix A: FOURIER TRANSFORM..... 199
 A.1 One-Dimensional Fourier Transform 199
 A.2 Two-Dimensional Fourier Transform..... 200
 A.3 Three-Dimensional Fourier Transform..... 201
 A.4 Fourier Transform Theorems 202

Appendix B: HANKEL TRANSFORM..... 205

Appendix C: DELTA FUNCTIONS 209
