<b>Preface</b>	<b>xi</b>
<b>Chapter 1 Mathematical Preliminaries</b>	<b>1</b>
1.1 The Two-Dimensional Fourier Transform and Its Properties	1
1.2 Linear Systems	6
1.3 Tensors and the Einstein Convention	10
1.4 Comments on Nomenclature	13
Problems	14
References	15
<b>Chapter 2 Geometrical Optics</b>	<b>16</b>
2.1 Fermat's Principle	17
2.2 Reflection and Refraction	18
2.3 Refraction in an Inhomogeneous Medium	21
2.4 Matrix Methods in Paraxial Optics	24
2.4.1 The Ray Transfer Matrix	25
2.4.2 Translation and Refraction Matrices	28
2.4.3 Illustrative Examples	31
2.4.4 Extension of the Ray-Transfer Method to Reflecting Systems	41
Problems	47
References	49

<b>Chapter 3</b>	<b>Physical Optics</b>	<b>50</b>
3.1	Maxwell's Equations: A Review	51
3.2	Linear Wave Propagation	52
3.2.1	Travelling-Wave Solutions	52
3.2.2	Intrinsic Impedance, the Poynting Vector, and Polarization	60
3.2.3	Electromagnetic Boundary Conditions and Fresnel Equations	65
3.2.4	Dispersion	77
3.2.5	Eikonal Equations	80
3.3	Derivation and Use of the Fresnel Diffraction Formula	83
3.3.1	The Spatial Transfer Function and Fresnel Diffraction	84
3.3.2	Illustrative Examples	88
3.4	Huygens' Principle	98
3.5	Fraunhofer Approximation and Fourier Optics	99
3.6	Wave Propagation in an Inhomogeneous Medium: Graded-Index Fiber	109
	Problems	114
	References	119
<b>Chapter 4</b>	<b>Optical Information Processing (I)</b>	<b>121</b>
4.1	Fourier-Transforming Property of Lenses	122
4.2	Imaging by a Single Lens and the Impulse Response of the Imaging System	131
4.3	Impulse Response of a Two-Lens System	139
4.4	Fourier-Transforming and Imaging Properties of Spherical Mirrors	142
4.5	Imaging with Spatially Incoherent Light and the Optical Transfer Function	142
4.6	Optical Image Processing	150
	Problems	156
	References	159
<b>Chapter 5</b>	<b>Optical Information Processing (II)</b>	<b>161</b>
5.1	Characteristics of Photographic Films	161
5.2	Notion of a Reference Wave to Record Amplitude and Phase; Holography	164
5.3	Construction of Practical Holograms or Complex Filters	170

5.4	Reconstruction and Applications of Holograms and Complex Filters	172
5.5	Holographic Magnification	177
5.6	Holographic Resolution	184
	Problems	187
	References	189
<b>Chapter 6</b>	<b>Acoustooptics and Electrooptics</b>	<b>190</b>
6.1	Acoustooptics: Qualitative Description and Heuristic Background	190
6.2	The Acoustooptic Effect: General Formalism	197
6.2.1	Sound-Field Configuration and Plane-Wave Interaction Model	200
6.2.2	Raman-Nath Regime	202
6.2.3	Bragg Regime	203
6.2.4	Discussion	206
6.3	Some Applications of the Acoustooptic Effect	208
6.3.1	Intensity Modulation of Laser Beam	208
6.3.2	Light-Beam Deflector-Spectrum Analyzer	208
6.3.3	Demodulation of Frequency-Modulated (FM) Signals	212
6.3.4	Bistable Switching	213
6.4	Wave Propagation in Anisotropic Media	216
6.4.1	The Dielectric Tensor	216
6.4.2	Plane-Wave Propagation in Uniaxial Crystals; Birefringence	219
6.4.3	Applications of Birefringence: Wave Plates	223
6.4.4	The Index Ellipsoid	225
6.5	Electrooptic Effect in Uniaxial Crystals	228
6.6	Some Applications of the Electrooptic Effect	231
6.6.1	Amplitude Modulation	231
6.6.2	Phase Modulation	236
	Problems	237
	References	240
<b>Chapter 7</b>	<b>Lasers and Photodetectors</b>	<b>241</b>
7.1	Spontaneous and Stimulated Emission	241
7.2	Amplification through Population Inversion in a Gain Medium	246
7.3	Three- and Four-Level Systems	252

7.4	Optical Resonators and Hermite–Gaussian Beams	254
7.5	The Helium–Neon Laser	265
7.6	Photodetectors	268
7.6.1	The Vacuum Photodiode and Photomultiplier	268
7.6.2	Semiconductor Junction Detectors	272
7.7	Noise Mechanisms	277
7.8	Detection Schemes	280
	Problems	284
	References	285
<b>Chapter 8</b>	<b>Nonlinear Optics</b>	<b>287</b>
8.1	The Concept of Nonlinearity	287
8.2	Harmonic and Subharmonic Generation	295
8.2.1	Mathematical Formulation of One-Dimensional Propagation	298
8.2.2	Second-Harmonic and Subharmonic Generation	301
8.3	Self-Refractive Index	309
8.4	Optical Bistability: The Nonlinear Fabry–Perot Cavity	316
8.5	Phase Conjugation	321
8.5.1	Comparison with Holography	322
8.5.2	Semiclassical Analysis	323
8.6	The Nonlinear Schrödinger Equation and Soliton Propagation	329
	Problems	335
	References	337
