1 Introduction and History of Functional Electrical Stimulation	1
Thomas Schick	
1.1 Introduction and Explanation of Terms	1
1.2 History of Functional Electrical Stimulation	5
References	6
2 Plasticity and Motor Learning	9
Patricia Meier	
2.1 Plasticity	9
2.2 Motor Learning	11
2.2.1 Stages of Motor Learning	11
2.2.2 Principles of Motor Learning	11
2.2.3 Factors Affecting the Motor Learning Process	13
2.3 Motor Learning and FES	14
References	17
3 Clarification Models and Mode of Action of Functional Electrical Stimulation	19
Patricia Meier	
3.1 Why Does Neuroplasticity Take Place when Practicing with FES?	19
3.2 What Kind of Neuroplastic Changes Are Induced by FES?	20
3.2.1 Effects of FES on Motor and Sensory Cortex	20
3.2.2 Effects of FES on the Corticospinal Tract	22
3.2.3 Effects of FES on Spinal Cord Structures	23
3.2.4 Effects of FES on Peripheral Nerves	25
References	27
4 Role of Electrical Parameters in Functional Electrical Stimulation	29
Winfried Mayr	
4.1 Introduction	29
4.1.1 Selection and Evaluation of Stimulators	29
4.1.2 What Really Matters	30
4.2 Monophasic/Biphasic Pulses/DC Component	30
4.2.1 Monophasic and Biphasic Pulse Forms and Parameter Definitions for Nerve and Muscle Stimulation	30

4.3	Monopolar/Bipolar Electrode Configurations	31
4.4	Controlled Current (CC)/Controlled Voltage (CV) Stimulus Delivery	33
4.5	Role of the Parameter's Amplitude and Pulse Width.	34
4.6	Role of the Parameter Frequency.	35
4.6.1	Application of Single Stimuli	36
4.6.2	Application of Low Frequencies	36
4.6.3	Frequencies Eliciting Fused Contractions	36
4.7	Special Case FES of Denervated Muscles.	37
4.8	Electrode and Parameter Management for Testing and Treatment of Completely or in Part Denervated Muscles	39
