

Contents

Chapter 1: Introduction	1
1.1 Digital Optics as a Subject	1
1.2 Contents of this Book	5
Chapter 2: Elements of Signal Theory	8
2.1 Mathematical Models of Optical Signals	8
2.2 Integral Representation of Signals	19
2.3 Signal Transform and Models of Optical Signals	28
Chapter 3: Digital Representation of Optical Signals	36
3.1 Principals of Signal Discretization and Quantizing	36
3.2 Discretization by Rastering and Sampling Theorems	42
3.3 Optimal Element-Wise Quantization	53
3.4 Application Problems in Rastering and Quantization of Images, Holograms and Interferograms	61
3.5 Principles of Image Coding Techniques	68
Chapter 4: Digital Representation of Signal Transformations	74
4.1 Principles for the Digital Representation of Signal Transformations	74
4.2 Digital Filters	77
4.3 Discrete Fourier Transforms	81
4.4 Discrete Fresnel Transform	92
4.5 Discrete Hartley Transform	99
Chapter 5: Efficient Computational Procedures for Digital Filtering	104
5.1 Methods for Computing Discrete Fourier Transforms Fast Fourier Transform Algorithm	104
5.2 Using Discrete Fourier Transformations in Computing the Convolution, Interpolation, and Spectral Analysis of the Signals	113
5.3 Digital Filtering Algorithms in a Space Domain	121

Chapter 6: Discrete Orthogonal Transforms and Fast Algorithms in a Matrix Representation	134
6.1 Class of Discrete Transforms and Fast Algorithms	134
6.2 Elements of Matrix Tools for Derivation of Fast Algorithms	145
6.3 Algorithms of Fast Fourier Transforms (FFT) in Matrix Representation	148
6.4 An Overview of Other Orthogonal Transform Fast Algorithm ...	151
6.5 Quantized Discrete Fourier Transform and its Fast Algorithm ...	159
Chapter 7: Digital Statistical Simulation and Measurements.....	165
7.1 Digital Statistical Models of Random Images and Wave Fields ..	165
7.2 EWT Models and Generation of Spatially Homogeneous and Inhomogeneous Sequences with a Given Distribution Law ..	167
7.3 LF Model and Generation of Spatial Homogeneous and Inhomogeneous Sequences with Gaussian Distribution and a Given Correlation Function	169
7.4 Examples of More Sophisticated Algorithmic Models: Evolutionary Algorithmic Models and Deterministic Chaos	177
7.5 Measurement of Statistical Characteristics of Signals	182
7.6 Measuring the Parameters of Random Interferences in Images, Holograms, and Interferograms	193
Chapter 8: Linear and Rank Adaptive Filters for Picture Processing.	202
8.1 Linear and Rank Filters as Structural Units in Picture Processing	203
8.2 Local Criteria of Processing Quality	204
8.3 Linear Locally Adaptive Filters	209
8.3.1 Optimal Scalar Filters	209
8.3.2 Locally Adaptive Linear Filters for Suppressing Additive Signal-Independent Noise	212
8.3.3 Correction of Linear Distortions	214
8.3.4 Linear Filters for Picture Preparation	216
8.3.5 Verification and Application Examples of Adaptive Linear Filters	218

8.4 Rank Algorithms	225
8.4.1 Background and Historical Overview	225
8.4.2 Rank Algorithms for Picture Smoothing	232
8.4.3 Enhancement and Extraction of Details in Pictures	239
8.4.4 Localization of Picture Details and their Edges	246
8.4.5 Verification and Examples of Applications of Rank Filters	247
8.5 Implementation of Adaptive Linear and Rank Filters	253
Chapter 9: Adaptive Linear Filters for Objects Localization in Pictures	260
9.0 Background	260
9.1 The Accuracy and Reliability of Two-Dimensional Object Localization on a Plane	262
9.1.1 Localization of a Single Object in the Presence of Additive White Gaussian Noise: Optimal Coordinate Estimator and Two Types of Estimation Errors	262
9.1.2 Localization of a Single Object in the Presence of Additive White Gaussian Noise: Potential Accuracy of Measurement of Coordinates	265
9.1.3 Localization of a Single Object in the Presence of Additive Gaussian Noise: Measurement Accuracy for Non-Optimal Estimator. Localization in Non-White Noise	270
9.1.4 Optimal Localization in Color (Multicomponent) Pictures	275
9.1.5 Localization of an Object in the Presence of Additive Gaussian Noise: Reliability of Measurements of Coordinates	278
9.1.6 Localization Reliability in the Presence of Additive White Gaussian Noise and Multiple Outside Objects	280
9.2 Localization of Objects on a Complex Background with Minimum Anomalous Errors	284
9.2.1 Formulation of the Problem	284
9.2.2 Localization of a Precisely Known Object Based on a Spatially Homogeneous Optimality Criterion	286
9.2.3 Localization of Inexactly Known Objects (Spatially Homogeneous Criterion)	294

9.2.4 Localization in the Case of a Spatially Inhomogeneous Criterion	296
9.2.5 Localization on Blurred Pictures	298
9.2.6 Detection Characteristics	299
9.2.7 Phase-only, Binary Phase-only, Minimum Average Correlation Energy, Entropy Optimized, and Other Filters for Optical Pattern Recognition. Reliable Localization and Picture Contours	300
9.2.8 Selection of the Reference Objects from the Standpoint of Localization Reliability	306
9.2.9 Detection and Filtration of Pulse Interferences	308
Chapter 10: Synthesis of Holograms	317
10.1 Mathematical Model	317
10.2 Discrete Representation of Fourier and Fresnel Holograms	322
10.3 Methods and Means for Recording Synthesized Holograms	326
10.4 Reconstruction of Synthesized Holograms	342
Index	355
