

Contents

	Preface	<i>xi</i>
1	Fundamental Concepts	1
1.1	Molecular Interactions in Nature	2
1.2	Potential Energies for Molecular Interactions	4
1.2.1	The Concept of a Molecular Potential Energy	4
1.2.2	Theoretical Classification of Interaction Potentials	6
1.2.2.1	Small Distances	7
1.2.2.2	Intermediate Distances	8
1.2.2.3	Large Distances	8
1.2.2.4	Very Large Distances	8
1.3	Quantal Treatment and Examples of Molecular Interactions	9
1.4	Long-Range Interactions and Electrical Properties of Molecules	21
1.4.1	Electric Dipole of Molecules	21
1.4.2	Electric Polarizabilities of Molecules	22
1.4.3	Interaction Potentials from Multipoles	23
1.5	Thermodynamic Averages and Intermolecular Forces	24
1.5.1	Properties and Free Energies	24
1.5.2	Polarization in Condensed Matter	25
1.5.3	Pair Distributions and Potential of Mean-Force	26
1.6	Molecular Dynamics and Intermolecular Forces	27
1.6.1	Collisional Cross Sections	27
1.6.2	Spectroscopy of van der Waals Complexes and of Condensed Matter	28
1.7	Experimental Determination and Applications of Interaction Potential Energies	29
1.7.1	Thermodynamics Properties	30
1.7.2	Spectroscopy and Diffraction Properties	30
1.7.3	Molecular Beam and Energy Deposition Properties	30
1.7.4	Applications of Intermolecular Forces	31
	References	31

2	Molecular Properties	35
2.1	Electric Multipoles of Molecules	35
2.1.1	Potential Energy of a Distribution of Charges	35
2.1.2	Cartesian Multipoles	36
2.1.3	Spherical Multipoles	37
2.1.4	Charge Distributions for an Extended System	38
2.2	Energy of a Molecule in an Electric Field	40
2.2.1	Quantal Perturbation Treatment	40
2.2.2	Static Polarizabilities	41
2.3	Dynamical Polarizabilities	43
2.3.1	General Perturbation	43
2.3.2	Periodic Perturbation Field	47
2.4	Susceptibility of an Extended Molecule	49
2.5	Changes of Reference Frame	52
2.6	Multipole Integrals from Symmetry	54
2.7	Approximations and Bounds for Polarizabilities	57
2.7.1	Physical Models	57
2.7.2	Closure Approximation and Sum Rules	58
2.7.3	Upper and Lower Bounds	59
	References	60
3	Quantitative Treatment of Intermolecular Forces	63
3.1	Long Range Interaction Energies from Perturbation Theory	64
3.1.1	Interactions in the Ground Electronic States	64
3.1.2	Interactions in Excited Electronic States and in Resonance	68
3.2	Long Range Interaction Energies from Permanent and Induced Multipoles	68
3.2.1	Molecular Electrostatic Potentials	68
3.2.2	The Interaction Potential Energy at Large Distances	70
3.2.3	Electrostatic, Induction, and Dispersion Forces	73
3.2.4	Interacting Atoms and Molecules from Spherical Components of Multipoles	75
3.2.5	Interactions from Charge Densities and their Fourier Components	76
3.3	Atom-Atom, Atom-Molecule, and Molecule-Molecule Long-Range Interactions	78
3.3.1	Example of $\text{Li}^+ + \text{Ne}$	78
3.3.2	Interaction of Oriented Molecular Multipoles	79
3.3.3	Example of $\text{Li}^+ + \text{HF}$	80
3.4	Calculation of Dispersion Energies	81
3.4.1	Dispersion Energies from Molecular Polarizabilities	81
3.4.2	Combination Rules	82

3.4.3	Upper and Lower Bounds	83
3.4.4	Variational Calculation of Perturbation Terms	86
3.5	Electron Exchange and Penetration Effects at Reduced Distances	87
3.5.1	Quantitative Treatment with Electronic Density Functionals	87
3.5.2	Electronic Rearrangement and Polarization	93
3.5.3	Treatments of Electronic Exchange and Charge Transfer	98
3.6	Spin-orbit Couplings and Retardation Effects	102
3.7	Interactions in Three-Body and Many-Body Systems	103
3.7.1	Three-Body Systems	103
3.7.2	Many-Body Systems	106
	References	107
4	Model Potential Functions	111
4.1	Many-Atom Structures	111
4.2	Atom–Atom Potentials	114
4.2.1	Standard Models and Their Relations	114
4.2.2	Combination Rules	116
4.2.3	Very Short-Range Potentials	117
4.2.4	Local Parametrization of Potentials	117
4.3	Atom–Molecule and Molecule–Molecule Potentials	119
4.3.1	Dependences on Orientation Angles	119
4.3.2	Potentials as Functionals of Variable Parameters	124
4.3.3	Hydrogen Bonding	124
4.3.4	Systems with Additive Anisotropic Pair-Interactions	125
4.3.5	Bond Rearrangements	125
4.4	Interactions in Extended (Many-Atom) Systems	127
4.4.1	Interaction Energies in Crystals	127
4.4.2	Interaction Energies in Liquids	131
4.5	Interaction Energies in a Liquid Solution and in Physisorption	135
4.5.1	Potential Energy of a Solute in a Liquid Solution	135
4.5.2	Potential Energies of Atoms and Molecules Adsorbed at Solid Surfaces	139
4.6	Interaction Energies in Large Molecules and in Chemisorption	143
4.6.1	Interaction Energies Among Molecular Fragments	143
4.6.2	Potential Energy Surfaces and Force Fields in Large Molecules	145
4.6.3	Potential Energy Functions of Global Variables Parametrized with Machine Learning Procedures	148
	References	152
5	Intermolecular States	157
5.1	Molecular Energies for Fixed Nuclear Positions	158
5.1.1	Reference Frames	158

- 5.1.2 Energy Density Functionals for Fixed Nuclei 160
- 5.1.3 Physical Contributions to the Energy Density Functional 162
- 5.2 General Properties of Potentials 163
 - 5.2.1 The Electrostatic Force Theorem 163
 - 5.2.2 Electrostatic Forces from Approximate Wavefunctions 164

- 6 Many-Electron Treatments 195**
 - 6.1 Many-Electron States 195
 - 6.1.1 Electronic Exchange and Charge Transfer 195
 - 6.1.2 Many-Electron Descriptions and Limitations 198
 - 6.1.3 Properties and Electronic Density Matrices 203
 - 6.1.4 Orbital Basis Sets 205
 - 6.2 Supermolecule Methods 209
 - 6.2.1 The Configuration Interaction Procedure for Molecular Potential Energies 209
 - 6.2.2 Perturbation Expansions 215
 - 6.2.3 Coupled-Cluster Expansions 218
 - 6.3 Many-Atom Methods 222
 - 6.3.1 The Generalized Valence-Bond Method 222

- 6.3.2 Symmetry-Adapted Perturbation Theory 225
- 6.4 The Density Functional Approach to Intermolecular Forces 228
 - 6.4.1 Functionals for Interacting Closed- and Open-Shell Molecules 228
 - 6.4.2 Electronic Exchange and Correlation from the Adiabatic-Connection Relation 232
 - 6.4.3 Issues with DFT, and the Alternative Optimized Effective Potential Approach 238
- 6.5 Spin-Orbit Couplings and Relativistic Effects in Molecular Interactions 243
 - 6.5.1 Spin-Orbit Couplings 243
 - 6.5.2 Spin-Orbit Effects on Interaction Energies 245
 - References 247
- 7 Interactions Between Two Many-Atom Systems 255**
 - 7.1 Long-range Interactions of Large Molecules 255
 - 7.1.1 Interactions from Charge Density Operators 255
 - 7.1.2 Electrostatic, Induction, and Dispersion Interactions 258
 - 7.1.3 Population Analyses of Charge and Polarization Densities 260
 - 7.1.4 Long-range Interactions from Dynamical Susceptibilities 262
 - 7.2 Energetics of a Large Molecule in a Medium 265
 - 7.2.1 Solute–Solvent Interactions 265
 - 7.2.2 Solvation Energetics for Short Solute–Solvent Distances 268
 - 7.2.3 Embedding of a Molecular Fragment and the *QM/MM* Treatment 270
 - 7.3 Energies from Partitioned Charge Densities 272
 - 7.3.1 Partitioning of Electronic Densities 272
 - 7.3.2 Expansions of Electronic Density Operators 274
 - 7.3.3 Expansion in a Basis Set of Localized Functions 277
 - 7.3.4 Expansion in a Basis Set of Plane Waves 279
 - 7.4 Models of Hydrocarbon Chains and of Excited Dielectrics 281
 - 7.4.1 Two Interacting Saturated Hydrocarbon Compounds: Chains and Cyclic Structures 281
 - 7.4.2 Two Interacting Conjugated Hydrocarbon Chains 284
 - 7.4.3 Electronic Excitations in Condensed Matter 289
 - 7.5 Density Functional Treatments for All Ranges 291
 - 7.5.1 Dispersion-Corrected Density Functional Treatments 291
 - 7.5.2 Long-range Interactions from Nonlocal Functionals 294
 - 7.5.3 Embedding of Atomic Groups with DFT 297
 - 7.6 Artificial Intelligence Learning Methods for Many-Atom Interaction Energies 300
 - References 303

8	Interaction of Molecules with Surfaces	309
8.1	Interaction of a Molecule with a Solid Surface	309
8.1.1	Interaction Potential Energies at Surfaces	309
8.1.2	Electronic States at Surfaces	314
8.1.3	Electronic Susceptibilities at Surfaces	319
8.1.4	Electronic Susceptibilities for Metals and Semiconductors	321
8.2	Interactions with a Dielectric Surface	324
8.2.1	Long-range Interactions	324
8.2.2	Short and Intermediate Ranges	329
8.3	Continuum Models	332
8.3.1	Summations Over Lattice Cell Units	332
8.3.2	Surface Electric Dipole Layers	333
8.3.3	Adsorbate Monolayers	335
8.4	Nonbonding Interactions at a Metal Surface	337
8.4.1	Electronic Energies for Varying Molecule–Surface Distances	337
8.4.2	Potential Energy Functions and Physisorption Energies	341
8.4.3	Embedding Models for Physisorption	347
8.5	Chemisorption	349
8.5.1	Models of Chemisorption	349
8.5.2	Charge Transfer at a Metal Surface	354
8.5.3	Dissociation and Reactions at a Metal Surface from Density Functionals	359
8.6	Interactions with Biomolecular Surfaces	363
