Preface	ix
Part I Basic Principles	1
I Introduction	3
1.1 A Note on Mathematics for 3D Computer Graphics	5
1.2 Getting Up to Speed	5
1.3 Using the Accompanying Software	6
1.4 Where Do You Want to Go Tomorrow?	7
2 Basic Theory and Mathematical Results	9
2.1 Coordinate Systems	9
2.2 Vectors	12
2.3 The Line	13
2.4 The Plane	14
2.5 Intersection of a Line and a Plane	15
2.6 Closest Distance of a Point from a Line	16
2.7 Closest Distance of Approach between Two Lines	17
2.8 Reflection in a Plane	18
2.9 Refraction at a Plane	19
2.10 Intersection of a Line with Primitive Shapes	21
2.11 Transformations	23
2.12 Parametric Curves	36
2.13 Interpolation	38
2.14 Bézier Curves	42
2.15 Cubic Splines	46
2.16 A Spline in One Dimension	48
2.17 Angular Interpolation—Quaternions	51

3	Data Structures for 3D Graphics	63
3.1	Structure Addressing Conventions	65
3.2	Linked Lists or Arrays of Structures?	67
3.3	Algorithms for Editing Arrays of Structures	69
3.4	Making an Edge List from a List of Polygonal Faces	73
3.5	Hierarchical Models	75
3.6	Finding Adjacent Polygons	77
3.7	Finding Polygons Adjacent to Edges	79
3.8	A Data Structure for Image Processing	85
4	Fast Realistic Rendering	87
4.1	The Basic Rendering Algorithm	88
4.2	Wireframe Drawing	90
4.3	Hidden Surface Drawing	93
4.4	The Painter's Algorithm	98
4.5	The Z Buffer Hidden Surface Algorithm	100
4.6	The Scanline Z Buffer Algorithm	104
4.7	Hidden Line Drawing	105
4.8	Culling and Clipping	111
4.9	Anti-Aliasing	116
4.10	Lighting	122
4.11	Shading	128
4.12	Pseudo Shadows	136
4.13	Surface Texturing	141
4.14	Image Mapping	147
4.15	Tricks and Tips	155
5	Ray-Traced Realistic Rendering	159
5.1	The Standard Ray-Tracing Algorithm	160
5.2	Optimization	164
5.3	Multi-Threading and Parallel Processing	178
6	Computer Animation	181
6.1	Keyframes—Tweening	181
6.2	Animating Rigid Motion	183
6.3	Character Animation	198
6.4	Inverse Kinematics	211
6.5	Physical Animation	231

Part II	Practical Algorithms: Modeling, Video Processing and Procedural Textures	241
	7 Modeling with Polygonal Datasets	243
	7.1 Triangulating Polygons	244
	7.2 Triangulating Polygons with Holes	254
	7.3 Subdividing Polygonal Facets	261
	7.4 Lofting	264
	7.5 Surfaces of Revolution	270
	7.6 Beveling	272
	7.7 Orienting Surface Normals	276
	7.8 Delaunay Triangulation	279
	7.9 Boolean Modeling	286
	7.10 Texture Coordinates	304
	7.11 Building Primitives	311
	8 Image and Video Processing	315
	8.1 A Data Structure for Image Processing	316
	8.2 Basic Functions for Drawing in a Framebuffer	319
	8.3 Filtering Images	321
	8.4 Effects Using the Z Buffer	329
	8.5 Video Effects	338
	9 Algorithms for Procedural Textures	355
	9.1 A Standard Interface	356
	9.2 Regular Dots	363
	9.3 Regular Bumps	367
	9.4 Textures Derived from the Noise Functions	373
	9.5 Regular Dots Perturbed by Noise	379
	9.6 Random Dots and Crystals	383
	9.7 Sharply Edged Features	387
	9.8 Rough Surfaces	389
	9.9 Stucco Surfaces	392
	9.10 Leather and Cauliflower	394
Part III	Real-Time 3D Graphics for Windows	397
	10 3D Graphics with OpenGL	399
	10.1 The Example Application	401

11 3D Graphics with Direct3D	439
11.1 The Component Object Model	441
11.2 Direct3D Retained Mode	443
11.3 Starting the Project	444
11.4 The CD3DView Class Header File	445
11.5 Setting Up Direct3D	448
11.6 Essential Message Handling	456
11.7 Enhancing the Direct3D Example	465
11.8 Animation in Direct3D	479
12 A Movie Player Using DirectDraw	499
12.1 The Main Program	502
12.2 Reading and Decoding an AVI File	515
12.3 Reading FLIC Files	520
Appendix Additional Mathematical Results	523
A.1 The Intersection of a Line with Non-Planar Primitive Shapes	523
A.2 Some Other Useful Non-Geometric Mathematical Results	531
Index	535
