Preface	xi
<b>1 Getting Started</b>	<b>1</b>
1.1 Talking to your electronic structure system	1
1.2 Helpful tools	3
1.3 General \$NBO keylist usage	4
1.4 Producing orbital imagery	6
Problems and exercises	8
<b>2 Electrons in Atoms</b>	<b>10</b>
2.1 Finding the electrons in atomic wavefunctions	10
2.2 Atomic orbitals and their graphical representation	13
2.3 Atomic electron configurations	18
2.4 How to find electronic orbitals and configurations in NBO output	23
2.5 Natural atomic orbitals and the natural minimal basis	29
Problems and exercises	31
<b>3 Atoms in Molecules</b>	<b>34</b>
3.1 Atomic orbitals in molecules	35
3.2 Atomic configurations and atomic charges in molecules	39
3.3 Atoms in open-shell molecules	44
Problems and exercises	49
<b>4 Hybrids and Bonds in Molecules</b>	<b>51</b>
4.1 Bonds and lone pairs in molecules	52
4.2 Atomic hybrids and bonding geometry	60
4.3 Bond polarity, electronegativity, and Bent's rule	71
4.4 Hypovalent three-center bonds	78
4.5 Open-shell Lewis structures and spin hybrids	82
4.6 Lewis-like structures in transition metal bonding	86
Problems and exercises	89

<b>5 Resonance Delocalization Corrections</b>	<b>92</b>
5.1 The natural Lewis structure perturbative model	93
5.2 Second-order perturbative analysis of donor–acceptor interactions	96
5.3 $\$Del$ energetic analysis [integrated ESS/NBO only]	105
5.4 Delocalization tails of natural localized molecular orbitals	113
5.5 How to $\$CHOOSE$ alternative Lewis structures	117
5.6 Natural resonance theory	123
Problems and exercises	133
<b>6 Steric and Electrostatic Effects</b>	<b>135</b>
6.1 Nature and evaluation of steric interactions	136
6.2 Electrostatic and dipolar analysis	145
Problems and exercises	153
<b>7 Nuclear and Electronic Spin Effects</b>	<b>155</b>
7.1 NMR chemical shielding analysis	156
7.2 NMR J-coupling analysis	162
7.3 ESR spin density distribution	168
Problems and exercises	173
<b>8 Coordination and Hyperbonding</b>	<b>176</b>
8.1 Lewis acid–base complexes	178
8.2 Transition metal coordinate bonding	193
8.3 Three-center, four-electron hyperbonding	204
Problems and exercises	206
<b>9 Intermolecular Interactions</b>	<b>209</b>
9.1 Hydrogen-bonded complexes	210
9.2 Other donor–acceptor complexes	217
9.3 Natural energy decomposition analysis	223
Problems and exercises	227
<b>10 Transition State Species and Chemical Reactions</b>	<b>231</b>
10.1 Ambivalent Lewis structures: the transition-state limit	232
10.2 Example: bimolecular formation of formaldehyde	236
10.3 Example: unimolecular isomerization of formaldehyde	243
10.4 Example: $S_N2$ halide exchange reaction	246
Problems and exercises	249

<b>11 Excited State Chemistry</b>	<b>252</b>
11.1 Getting to the "root" of the problem	252
11.2 Illustrative applications to NO excitations	256
11.3 Finding common ground: NBO versus MO state-to-state transferability	269
11.4 NBO/NRT description of excited-state structure and reactivity	277
11.5 Conical intersections and intersystem crossings	282
Problems and exercises	289
Appendix A: What's Under the Hood?	297
Appendix B: Orbital Graphics: The NBOView Orbital Plotter	300
Appendix C: Digging at the Details	302
Appendix D: What If Something Goes Wrong?	304
Appendix E: Atomic Units (a.u.) and Conversion Factors	307
<b>Index</b>	<b>309</b>
