Contents

1 Parabolic Splines based One-Dimensional Polynomial 1
1.1 The Functional Relationships Based on Parabolic Splines 1
1.2 The Theoretical Issues of Splines 2
1.3 Evaluation of Parabolic B-Splines of Multiple Levels 6
1.4 Summary 10
References 10

2 B-Spline Approximation for Polynomial Splines 13
2.1 Specialised Computing Structure for Running B-Spline Approximation 13
2.2 Summary 18
References 19

3 One-Dimensional Polynomial Splines for Cubic Splines 21
3.1 Parallel Computing Structure Based on Cubic Basic Splines 21
3.2 Summary 25
References 25

4 Multidimensional Polynomial Splines 27
4.1 Multidimensional Polynomial Splines in Modelling of Functional Relationships 27
4.2 Methods of Computation of Modelling Coefficients Using Multidimensional Splines 28
4.3 The Main Characteristics of Implementation of Tabular-Algorithmic Computation Structures of Piecewise-Polynomial Processing of Signals 30
4.3.1 Performance Assessment 30
4.3.2 Memory Capacity Assessment 31
4.4 Summary 32
References 33

5 Evaluation Methods of Spline 35
5.1 Hardware Used for Evaluation of Spline-Recovery Methods 35
5.2 Purpose and Characteristics of Signals 37
5.3 Structure of DSP with Harvard's Architecture 38
5.4 Blackfin Family Processors 41
5.5 Summary 45
References 45

6 Requirements of MATLAB/Simulink for Signals 47
6.1 Development Tools for Modelling Special Processor Structures Based on MATLAB and Simulink 47
6.2 Summary 52
References 54

7 Geophysical Application for Splines 55
7.1 Software for Processing of Geophysical Signals 55
7.2 Generation of Electromagnetic and Acoustic Emissions 57
7.3 Splines' Implementation of Geophysical Studies Data 60
7.4 Summary 61
References 63

8 Spline Evaluation for Railways 65
8.1 Analysis of Spline Implementation in Railway Rails 65
8.2 Stability Evaluation of Railways 68
8.3 Discussion 68
References 69
