Preface

ix

1. Introduction

1

1.1 Introduction to building energy management systems

1

1.2 BEMSs in smart grids

4

1.3 Benefits of BEMSs

5

1.4 Layout of the book

6

References

6

2. Energy sources in building systems

9

2.1 Introduction

9

2.2 Wind power

10

2.3 Solar energy

15

2.4 Energy storage systems

19

References

21

3. Information infrastructure for building energy management

23

3.1 Introduction

23

3.2 Building automation systems

24

3.3 Building Internet-of-Things

24

3.4 Cloud computing

25

3.5 An integrated information infrastructure for BEMSs

27

References

28

4. Power demand response and demand side management

29

4.1 Introduction

29

4.2 Basic concepts

31

4.3 Power systems

33

4.4 Smart grids

35

4.5 Demand response and demand side management

38

4.6 Demand response for grid peak power reduction

41

4.7 Incentive-based demand side management

45

4.8 Price-based demand side management

45

4.9 Application example

47

4.10 Comparison between incentive- and price-based DSM strategies

49

References

51

5. Building energy management systems	53
5.1 Introduction	53
5.2 Overview of a building energy management system and its operations	54
5.3 Typical energy resources managed by BEMSs	58
5.4 Main functional features of BEMSs	61
References	65
6. Building power load forecasting	69
6.1 Introduction	70
6.2 Explanatory and time series STLF models	71
6.3 Exponential smoothing-based STLF	73
6.4 ARIMA-based STLF	81
6.5 ANN-based STLF	88
6.6 Introduction to deep neural network-based STLF	108
References	109
7. Evolutionary optimization	111
7.1 Introduction	111
7.2 Illustrative optimization example	112
7.3 Introduction to evolutionary algorithms	117
7.4 Genetic algorithm	119
7.5 Particle swarm optimization	121
7.6 Differential evolution algorithm	123
7.7 Control parameters of evolutionary algorithms	125
7.8 Evolutionary algorithms applied to benchmark functions	127
7.9 Remarks for evolutionary optimization	135
References	137
8. Energy management of building-integrated battery energy storage systems	139
8.1 Introduction	139
8.2 Types of BESSs in building applications	141
8.3 Model of a BESS	142
8.4 BESS integration for emergency power backup for buildings	148
8.5 BESS integration for time-varying energy tariff	151
8.6 BESS integration with on-site renewable energy	155
8.7 Optimization-based BESS energy management	160
8.8 Introduction to vehicle-to-building/home integration	168
References	169

9. Energy management of flexible electric appliances	171
9.1 Introduction	171
9.2 Modeling time shiftable appliances	172
9.3 Modeling power adjustable appliances	174
9.4 A simple energy management scheme for TSAs	176
9.5 A simple energy management schemes for PAAs	179
9.6 Energy management for TSAs: An optimization-based approach	182
9.7 Energy management scheme for both TSAs and PAAs with renewable energy penetration: An optimization-based approach	187
References	197
10. Energy management of HVAC systems	199
10.1 Introduction	200
10.2 Introduction to HVAC systems	200
10.3 Thermal model for the modeling of indoor conditions	201
10.4 Model representation for the operation of an HVAC	209
10.5 Evaluation of the HVAC's energy consumption and energy cost	215
10.6 Energy management of HVACs with varying set-temperatures	217
10.7 Pre-heating/cooling-based HVAC energy management	221
10.8 HVAC energy management for renewable energy accommodation	226
References	231
11. Energy sharing among buildings	233
11.1 Introduction	233
11.2 An internal energy-sharing pricing scheme for buildings	234
11.3 Peer-to-peer energy trading among buildings	239
11.4 Blockchain-enabled P2P energy trading	247
References	252
12. Building-to-grid integration	255
12.1 Introduction	255
12.2 From direct load control to building-to-grid integration	256
12.3 Building energy management for peak-to-average ratio optimization	259
12.4 A building-to-grid system for emergency load shedding	266
References	276
13. Buildings and microgrids	279
13.1 Introduction	279
13.2 Introduction to microgrids	280

13.3	Buildings in a microgrid	282
13.4	Operating a building as an off-grid microgrid during power outages	285
	References	291

14. Occupant-to-grid integration **295**

14.1	Introduction of occupant-to-grid integration	295
14.2	Introduction to personalized recommendation technology	296
14.3	Application example: Personalized building-side renewable investment recommendation system	302
14.4	Other applications of personalized recommendation in occupant-side energy systems	306
	References	310
