

CONTENT

CHAPTER 1

7

General introduction

CHAPTER 2

17

High sperm concentration during cryopreservation decreases post-thaw motility percentage without compromising *in vitro* fertilization outcomes in common carp

CHAPTER 3

27

Optimizing aquaculture-scale common carp artificial reproduction: a novel approach to sperm cryopreservation using large-volume containers and elevated thawing temperatures

CHAPTER 4

39

Influence of ploidy level of different Acipenseridae species on optimal spermatozoa concentration during cryopreservation

CHAPTER 5

55

Motile sperm fraction separation from cryopreserved samples in taxonomically distant fishes

CHAPTER 6

71

General discussion
