

## Contents

	<b>Preface</b>	<i>xi</i>
	<b>List of Contributors</b>	<i>xiii</i>
<b>1</b>	<b>Introduction</b>	<b>1</b>
	<i>Puru Jena and Qiang Sun</i>	
	References	7
<b>2</b>	<b>Rational Design of Superatoms Using Electron-Counting Rules</b>	<b>15</b>
	<i>Puru Jena, Hong Fang, and Qiang Sun</i>	
2.1	Introduction	15
2.2	Electron-Counting Rules	17
2.2.1	Jellium Rule	17
2.2.2	Octet Rule	24
2.2.2.1	Superalkalis and Superhalogens	25
2.2.2.2	Superchalcogens	27
2.2.3	18-Electron Rule	29
2.2.4	32-Electron Rule	30
2.2.5	Aromaticity Rule	31
2.2.6	Wade-Mingos Rule	34
2.3	Stabilizing Negative Ions Using Multiple Electron-Counting Rules	37
2.3.1	Monoanions	37
2.3.2	Dianions	41
2.3.3	Trianions	43
2.3.4	Tetra-Anions and Beyond	44
2.4	Conclusions	46
	References	46
<b>3</b>	<b>Superhalogens – Enormously Strong Electron Acceptors</b>	<b>53</b>
	<i>Piotr Skurski</i>	
3.1	Superhalogen Concept	53
3.1.1	Early Studies	53
3.1.2	Further Research (until 1999)	55

- 3.1.3 First Measurement of Gas-Phase Experimental Electron Detachment Energies 57
- 3.1.4 The Performance of Theoretical Treatments in Estimating VDEs 58
- 3.2 Alternative Superhalogens 61
  - 3.2.1 Nonmetal Central Atoms 62
  - 3.2.2 Nonhalogen Ligands 63
  - 3.2.3 Beyond the  $\text{MX}_{k+1}$  Formula 66
  - 3.2.4 Superhalogens as Ligands 68
- 3.3 Polynuclear Systems and the Search for EA and VDE Limits 70
  - 3.3.1 Polynuclear Superhalogens 71
  - 3.3.2 Search for EA and VDE Limits 74
  - 3.3.3 Magnetic Superhalogens 76
- 3.4 Superhalogens' Applications at a Glance 77
- 3.5 Final Remarks 78
- Acknowledgements 79
- References 79

#### **4 Endohedrally Doped Superatoms and Assemblies 85**

*Vijay Kumar*

- 4.1 Introduction 85
- 4.2 Magic Clusters and Their Electronic Stability 88
- 4.3 Discovery of Silicon Fullerenes and Other Polyhedral Forms 89
- 4.4 Endohedral Superatoms of Ge, Sn, and Pb 97
- 4.5 Magnetic Superatoms 101
- 4.6 Endohedral Clusters of Group 11 Elements 101
- 4.7 Endohedral Clusters of B, Al, and Ga 104
- 4.8 Hydrogenated Silicon Fullerenes 107
- 4.9 Compound Superatoms and Other Systems 108
- 4.10 Assemblies of Superatoms 110
- 4.11 Concluding Remarks 117
- Acknowledgements 117
- References 118

#### **5 Magnetic Superatoms 129**

*Nicola Gaston*

- 5.1 Introduction 129
- 5.2 The Arrival of the Magnetic Superatom 130
- 5.3 Tunable Superatoms 133
- 5.4 The Delocalisation of *d*-electrons 134
- 5.5 Prospects for Nanostructured Magnetic Material Design 137
- References 138

#### **6 Atomically Precise Synthesis of Chemically Modified Superatoms 141**

*Shinjiro Takano and Tatsuya Tsukuda*

- 6.1 Introduction 141
- 6.1.1 The Concept of Superatoms 141

6.1.2	Chemically Modified Au/Ag Superatoms	142
6.2	Electronic Structures of Chemically Modified Superatoms	147
6.2.1	Size Effects	147
6.2.2	Composition Effects	151
6.2.3	Shape Effects	153
6.3	Atomically Precise Synthesis of Chemically Modified Superatoms	160
6.3.1	Size Control	160
6.3.1.1	Top-down Approach: Size Focusing	161
6.3.1.2	Bottom-up Approach: Size Convergence	163
6.3.1.3	Template Method	168
6.3.1.4	Kinetic Control	168
6.3.2	Composition Control	169
6.3.2.1	Co-reduction Method	169
6.3.2.2	Antigalvanic Method	170
6.3.2.3	Hydride-Mediated Transformation	172
6.3.3	Shape Control	172
6.3.4	Surface Control	174
6.3.4.1	Ligand Exchange	174
6.3.4.2	Hydrogen-Mediated Transformation	176
6.4	Summary	176
	References	177
<b>7</b>	<b>Atomically Precise Noble Metals in the Nanoscale, Stabilized by Ligands</b>	<b>183</b>
	<i>Hannu Häkkinen</i>	
7.1	Introduction	183
7.2	Fundamentals	184
7.2.1	Free Electron Model and the Kubo Gap	184
7.2.2	Electron Shell Structure	185
7.2.3	Ligand-Stabilized Metal Clusters as Superatoms	188
7.2.3.1	Case Study: The $(\text{Ag}_{44}(\text{SR})_{30})^{4-}$ Superatom	188
7.2.4	Transition from Electronic to Atomic Shells	191
7.3	Applications	194
7.3.1	Catalysis	194
7.3.2	Biological and Medical Applications	199
7.3.2.1	Case Study: Imaging of Enteroviruses	200
7.3.3	Self-Assembling Cluster Materials from Superatoms	201
7.3.3.1	Case Study: Polymeric 1D Cluster Materials	203
7.4	Summary and Outlook	205
	References	206
<b>8</b>	<b>Superatoms as Building Blocks of 2D Materials</b>	<b>209</b>
	<i>Zhifeng Liu</i>	
8.1	Introduction	209
8.2	Fullerene-assembled 2D Materials	211
8.2.1	$\text{C}_{60}$ -assembled Monolayer	211
8.2.1.1	Freestanding vdW $\text{C}_{60}$ Monolayer	212

8.2.1.2	Freestanding Covalent Polymerized C <sub>60</sub> Monolayer	213
8.2.2	C <sub>n</sub> (n = 20, 26, 32, 36)-assembled Monolayers	217
8.2.3	Fullerene Monolayers on Substrates	220
8.3	Si-based Cluster Assembled 2D Materials	223
8.3.1	V@Si <sub>12</sub> Assembled 2D Monolayer	223
8.3.1.1	Structure and Stability	223
8.3.1.2	Electronic and Ferromagnetic Properties	224
8.3.2	Other TM@Si <sub>12</sub> Assembled 2D Monolayers	225
8.3.3	Ta@Si <sub>16</sub> Assembled 2D Monolayer and That on Substrate	226
8.4	Binary Semiconductor Cluster Assembled 2D Materials	231
8.4.1	Cd <sub>6</sub> Se <sub>6</sub> Assembled Sheets	232
8.4.2	X <sub>12</sub> Y <sub>12</sub> Cage Cluster Assembled Monolayer	235
8.5	Simple and Noble Metal Cluster-assembled 2D Materials	236
8.5.1	Mg <sub>7</sub> Assembled Monolayer	236
8.5.2	Au <sub>9</sub> and Pt <sub>9</sub> Assembled Square Monolayer	237
8.6	Zintl-ion Cluster-assembled 2D Materials	240
8.6.1	Ge <sub>9</sub> Ion Cluster Monolayer	240
8.6.2	Ti@Au <sub>12</sub> Ion Cluster Monolayer	241
8.7	Chevrel Cluster-Assembled 2D Materials	243
8.7.1	Re <sub>6</sub> Se <sub>8</sub> Cluster-based Monolayer	243
8.7.2	Co <sub>6</sub> Se <sub>8</sub> Cluster-based Monolayer	245
8.8	Summary and Future Perspectives	247
	References	249
<b>9</b>	<b>Superatom-Based Ferroelectrics</b>	<b>257</b>
	<i>Menghao Wu and Puru Jena</i>	
9.1	Introduction	257
9.2	Organic Ferroelectrics	258
9.3	Hybrid Organic-Inorganic Perovskites	262
9.4	Supersalts	266
9.5	Conclusion	270
	References	270
<b>10</b>	<b>Cluster-based Materials for Energy Harvesting and Storage</b>	<b>277</b>
	<i>Puru Jena, Hong Fang, and Qiang Sun</i>	
10.1	Introduction	277
10.2	Cluster-based Materials for Moisture-resistant Hybrid Perovskite Solar Cells	283
10.3	Cluster-based Materials for Optoelectronic Devices	287
10.4	Cluster-based Materials for Solid-state Electrolytes in Li- and Na-ion Batteries	287
10.4.1	Halogen-free Electrolytes	289
10.4.2	Cluster-based Antiperovskites for Electrolytes in Li-ion Batteries	292
10.4.3	Cluster-based Antiperovskites for Electrolytes in Na-ion Batteries	297
10.5	Cluster-based Materials for Hydrogen Storage	300

10.5.1	Hydrogen Interaction Mechanism	300
10.5.2	Intermediate States	303
10.5.3	Catalysts for Lowering the Dehydrogenation Temperature	305
10.6	Clusters Promoting Unusual Reactions	305
10.6.1	Zn in +III Oxidation State	307
10.6.2	Covalent Binding of Noble Gas Atoms	307
10.7	Conclusions	310
	References	311
<b>11</b>	<b>Thermal and Thermoelectric Properties of Cluster-based Materials</b>	<b>317</b>
	<i>Tingwei Li, Qiang Sun, and Puru Jena</i>	
11.1	Introduction	317
11.2	Basic Theory	318
11.2.1	Thermoelectric Effect	318
11.2.2	Material Performance	319
11.2.3	Tuning ZT by Carrier Concentration	320
11.2.4	Tuning ZT by Electronic Structure	321
11.2.4.1	Carrier Effective Mass, $m^*$	321
11.2.4.2	Carrier Mobility	322
11.3	Low Lattice Thermal Conductivity of Cluster-based Materials	323
11.3.1	Crystal Complexity of Cluster-based Materials	324
11.3.2	Chemical Bond Hierarchy in Cluster-based Materials	325
11.3.3	Structural Disorder in Cluster-based Materials	326
11.3.4	Orientalional Disorder in Cluster-based Materials	327
11.3.4.1	$\text{Co}_6\text{E}_8(\text{PEt}_3)_6$ and $[\text{Co}_6\text{E}_8(\text{PEt}_3)_6][\text{C}_{60}]_2$	328
11.3.4.2	Fullerene Assembled Films	329
11.4	Thermoelectric Properties of some Selected Cluster-based Materials	330
11.4.1	$\text{Mo}_6$ and $\text{Mo}_9$ Cluster-based Selenides	330
11.4.1.1	Crystal Structures	330
11.4.1.2	Electronic Structures	331
11.4.1.3	Thermal Properties	332
11.4.1.4	Thermoelectric Figure of Merit ZT	334
11.4.2	Boron-based Cluster Materials	334
11.4.2.1	Crystal Structures	335
11.4.2.2	Thermoelectric Properties	335
11.4.3	Silver-based Cluster Materials	338
11.5	Conclusion	341
	References	342
<b>12</b>	<b>Clusters for <math>\text{CO}_2</math> Activation and Conversion</b>	<b>349</b>
	<i>Haoming Shen, Qiang Sun, and Puru Jena</i>	
12.1	Introduction	349
12.2	Superalkali Catalysts	351
12.2.1	Li-based Superalkalis for $\text{CO}_2$ Activation	351
12.2.2	Supported or Embedded Superalkalis for $\text{CO}_2$ Capture	358

12.3 Al-based Clusters for CO<sub>2</sub> Capture 359

12.4 Ligand-protected Au<sub>25</sub> Clusters for CO<sub>2</sub> Conversion 361

12.5 M@Ag<sub>24</sub> Clusters for CO<sub>2</sub> Conversion 364

12.6 Cu-based Clusters for CO<sub>2</sub> Conversion 367

12.7 Metal Encapsulated Silicon Nanocages for CO<sub>2</sub> Conversion 370

12.8 Summary and Perspectives 370
