

# Contents

1. Introduction	6
2. Sequential and non-sequential methods	6
3. Criterion for on-line statistical process control	7
4. Basic on-line procedures	7
4.1. Shewhart procedure . . . . .	8
4.2. CUSUM procedure . . . . .	11
4.3. Normal distribution – one-sided CUSUM procedure for shift in mean . . . . .	14
4.4. Normal distribution – two-sided CUSUM procedure for arbitrary shift in mean . . . . .	17
5. Exponentially weighted moving average	18
6. Remarks on application of change-point detection methods to on-line statistical process control	19
7. Example	20
8. Application of non-sequential change - point methods to off-line statistical process control	22
9. Decision rules based on hypotheses testing	22
9.1. Detecting a change in mean . . . . .	23
9.2. Detecting a change in mean and/or variance . . . . .	26
9.3. Appearance of gradual linear trend . . . . .	27
9.4. Abrupt appearance of linear trend . . . . .	28
10. Extremes of limit random processes	28
11. Concept of research field development and its place in educational system	29
