

## Contents

<b>Preface</b> Ondřej Májek, Tomáš Pavlík	5
<b>LECTURES</b>	7
<b>Basic concepts in epidemiology</b> Ondřej Májek	9
<b>Regression modelling in biomedical studies</b> Hynek Pikhart	23
<b>Public sources of cancer epidemiology</b> Jan Mužík, Tomáš Pavlík, Ladislav Dušek	38
<b>Introduction to survival analysis</b> Zdeněk Valenta	44
<b>Hazard rate functions driven by finite-state and continuous-state stochastic processes</b> Ondřej Pokora	57
<b>How to design a parametric survival model</b> Kateřina Opršalová, Jiří Holčík	67
<b>Sample size and power analysis in epidemiological and clinical research</b> Pavla Kadlecová	76
<b>Basic aspects of clinical data management</b> Jaroslav Koča	90

<b>Estimating number of cancer patients potentially treated with anti-tumour therapy</b> Tomáš Pavlík, Ondřej Májek, Jan Mužík, Ladislav Dušek	96
<b>COMPUTATIONAL BIOLOGY STUDENTS' ABSTRACTS</b> 107	
 <b>Estimation of relative survival of patients after PCI</b> Klára Benešová	109
 <b>System of equine fitness evaluation based on time-frequency analysis</b> Igor Feigler, Michalis Zervakis, Jiří Holčík	112
 <b>Statistical evaluation of recurrent events in chronic myeloid leukaemia</b> Petrá Kovalčíková, Tomáš Pavlík, Eva Janoušová	117
 <b>Risk factors for rehospitalization and mortality for cardiovascular event in a consecutive group of patients after first hospitalization for acute heart failure</b> Michal Svoboda	120
