

Contents

1	Introduction	6
2	Principles of numerical simulations of rotational spectra for polyatomic molecules	7
3	Numerical simulations of diatomic molecular electron-vibrational-rotational spectra	8
3.1	Principles of the electronic spectra simulations	8
3.2	Problems of the electronic spectra simulations	9
3.3	Application of the simulated electronic spectra	9
4	Solution of deconvolution by Fourier transform and its application to optical spectra	14
4.1	Fourier transform and deconvolution	14
4.2	Application of the solution to the optical spectra	15
5	Structure and features of programs Simul and RotSimul	17
5.1	Program Simul	17
5.2	Program RotSimul	18
6	Conclusion	20
