Foreword	9
Preliminaries	11
A. Some results of functional analysis	11
B. Motivation: Transferring a boundary value problem for an elliptic partial differential equation to a variational formulation	36
C. The completeness of the space $L_2(\Omega)$	38

PART I. THE THEORY OF SOBOLEV SPACES

1. Sobolev spaces $W_2^k(\Omega)$ and $H^{k,p}(\Omega)$	41
2. Mean continuity	57
3. Regularization. The theorem on the density of the set $C_0^\infty(\Omega)$ in the space $L_2(\Omega)$	60
4. Theorem on density of $C^\infty(\bar{\Omega})$ in $H^k(\Omega)$	67
5. Beppo Levi spaces $BL_p(\Omega)$	75
6. Examples of functions from the space $H^1(\Omega) = BL_2(\Omega)$	84
7. Lipschitz transformations	88
8. The imbedding of the Sobolev spaces $H^{k,p}(\Omega)$ into the Lebesgue spaces $L_q(\Omega)$	104
9. The imbedding of Sobolev spaces $H^{k,p}(\Omega)$ into spaces of continuous functions $C^{0,\lambda}(\bar{\Omega})$	117
10. The Poincaré inequality and Rellich theorem. Bramble-Hilbert lemma. Compact imbeddings	126
11. Traces of functions from $H^1(\Omega)$	139
12. Other equivalent norms	154
13. Calderon's extension of functions from $H^k(\Omega)$	158
14. Nikolskij's extension in the case of a smooth boundary	171
15. A generalization of Nikolskij's extension to the case of a two-dimensional domain with a piecewise smooth boundary	180
16. A special case	194
17. Whitney-Hestenes extension of functions from $C^m(\bar{\Omega})$ with preserving their class	197
18. Spaces $L_\infty(\Omega)$ and $W^{k,\infty}(\Omega)$	210
19. Further theorems concerning traces and extension operators from the spaces $H^{1,p}(\Omega)$	216
20. Appendix: Proof of Ostrogradskij's theorem	229

PART II. BASIC APPLICATIONS OF THE THEORY OF SOBOLEV SPACES IN THE FINITE ELEMENT METHOD

21. Outlines of Parts II-V	247
22. Existence and uniqueness of the solution of a variational problem	249
23. Definition of an approximate solution. Theorem on existence and uniqueness of the approximate solution	256

24. Interpolation theorem	263
25. Convergence of approximate solutions	268
26. The density of $C^\infty(\bar{\Omega}) \cap V$ in V	272
27. Numerical integration in the finite element method	297
28. The theory of numerical integration in the case of the inhomogeneous Neumann boundary condition	316
29. The effect of the approximation of a curved boundary	322

PART III. VARIATIONAL PROBLEMS IN DOMAINS WITH CUSP-POINTS

30. Continuous problem	351
31. Discretization by the finite element method. Convergence theorems	360

PART IV. PARABOLIC-ELLIPTIC VARIATIONAL PROBLEMS

32. An excursion to the theory of abstract functions	379
33. The Continuous Problem	387
34. The Discrete Problem	398
35. Existence. Uniqueness. Convergence	404

PART V. SEMIREGULAR FINITE ELEMENTS

36. Semiregular triangular finite elements with a polynomial of first degree ..	427
37. Semiregular triangular finite elements of the Hermite type	435
38. Semiregular tetrahedral finite cubic elements of the Hermite type	448
39. The interpolation theorem for narrow quadrilateral isoparametric finite elements	466
40. Convergence results in the case of semiregular finite elements	485
