## CHAPTER 1

### Introduction to Cognitive Psychology 1

Cognitive psychology: Studying the mind 3  
What is the mind? 3

Studying the mind: Pioneering studies 4

**Research box 1.1:** Applying Donders' subtraction method to brain imaging 6

Abandoning the study of the mind 10

1913: Watson founds behaviourism 10

1938: Skinner's operant conditioning 11

Setting the stage for the re-emergence of the mind in psychology 12

The rebirth of the study of the mind 13

Introduction of the digital computer 13

Artificial intelligence and information theory 14

The cognitive "revolution" took a while 15

Looking ahead 16

Modern research in cognitive psychology 16

The role of models in cognitive psychology 16

Something to consider 19

Benefits for science, society and you! 19

**TEST YOURSELF 1.1** 22

Chapter summary 22

Think about it 23

Key terms 23

CogLab experiment 23

## CHAPTER 2

### Cognitive Neuroscience 24

Why study cognitive neuroscience? 25

Neurons: Communication and representation 27

The microstructure of the brain: Neurons 27

The signals that travel in neurons 29

**Method:** Recording from a neuron 30

The principle of neural representation 32

Representation by neurons 33

Sensory coding 35

**TEST YOURSELF 2.1** 37

Organization: Neuropsychology 37

Localization demonstrated by neuropsychology 37

**Method:** Demonstrating a double dissociation 39

Organization: Brain imaging 40

Brain imaging evidence for localization of function 40

**Method:** Functional magnetic resonance imaging 40

Distributed representation across the brain 44

All together now: Neural networks 46

**Method:** Electroencephalography 47

**Method:** Magnetoencephalography 48

Something to consider 49

From correlation to causation 49

**TEST YOURSELF 2.2** 50

Chapter summary 50

Think about it 51

Key terms 51

CogLab experiment 51

## CHAPTER 3

### Perception 52

The nature of perception 54

Some basic characteristics of perception 54

Going beyond light-dark patterns 55

Why is it so difficult to design a perceiving machine? 57

The stimulus on the receptors is ambiguous 57

Objects can be hidden or blurred 58

Objects look different from different viewpoints 59

Information for human perception 59

Perceiving objects and people: The role of context 60

Hearing words in a sentence: The role of knowledge and experience 62

Experiencing pain: The influence of attention 63

**TEST YOURSELF 3.1** 64

- Conceptions of object perception 64
  - Helmholtz's theory of unconscious inference 64
  - The Gestalt principles of organization 65
  - Taking regularities of the environment into account 67
  - Bayesian inference 70
  - Comparing the four approaches 71

**Research box 3.1:** The role of motivation 73

**TEST YOURSELF 3.2** 74

Neurons and knowledge about the environment 75

- Neurons that respond to horizontals and verticals 75

- Experience-dependent plasticity 76

The interaction between perceiving and taking action 77

- Movement facilitates perception 77

- The interaction of perception and action 78

- The physiology of perception and action 78

**Method:** Brain lesioning 79

- Picking up a coffee cup and other behaviours 82

Something to consider 83

- The role of culture in perception 83

**TEST YOURSELF 3.3** 85

Chapter summary 85

Think about it 86

Key terms 86

CogLab experiments 87

## CHAPTER 4

### Attention 88

Pioneering studies: Attention as selection 91

- Broadbent's filter model of attention 91

- Modifying Broadbent's model: The attenuation model 93

- A late selection model 95

Processing capacity and perceptual load 96

**Method:** Flanker and load tasks 96

- Distraction and cognitive control 99

**TEST YOURSELF 4.1** 100

Spatial attention: Overt and covert attention 101

- Overt attention: Scanning a scene with eye movements 101

- Covert attention: Directing attention without eye movements 105

**Method:** Posner spatial cueing task 106

Goal-driven, stimulus-driven, and history-driven selection 107

Divided attention: Can we attend to more than one thing at a time? 109

- Divided attention can be achieved with practise: Automatic processing 109

- Divided attention becomes more difficult when tasks are harder 110

- Distractions while driving 111

**TEST YOURSELF 4.2** 112

What happens when we don't attend? 113

- Inattention blindness 113

**Research box 4.1:** Inattention blindness in expert observers 114

- Change detection 115

Attention and experiencing a coherent world 117

- Why is binding necessary? 117

- Feature integration theory 117

Something to consider 120

- How emotion drives attention 120

**TEST YOURSELF 4.3** 123

Chapter summary 123

Think about it 124

Key terms 125

CogLab experiments 125

## CHAPTER 5

### Short-Term and Working

#### Memory 126

The modal model of memory 129

Sensory memory 131

- The sparkler's trail and the projector's shutter 131

- Sperling's experiment: Measuring the capacity and duration of the sensory memory store 131

Short-term memory 134

- What is the duration of short-term memory? 134

- How many *items* can be held in short-term memory? 136

**Method:** Change detection 138

- How much *information* can be held in short-term memory? 139

**TEST YOURSELF 5.1** 140

- Working memory 141
  - The phonological loop 144
  - The visuospatial sketch pad 146
  - The central executive 148
- Method:** Event-related potentials 149
- Research box 5.1:** Individual differences in controlling access to working memory 151
  - The episodic buffer 152
  - Cowan's embedded processes model 153
- Working memory and the brain 154
  - The effect of damage to the prefrontal cortex 154
  - Prefrontal neurons that fire when holding information 155
  - fMRI research: Executive attention and object representations 156
- Method:** fMRI decoding procedure 157
- Something to consider 158
  - Stress and working memory 158
- TEST YOURSELF 5.2** 161
- Chapter summary 161
- Think about it 162
- Key terms 163
- CogLab experiments 163

## CHAPTER 6

### Long-Term Memory: Structure 164

- Comparing short-term and long-term memory processes 166
- Method:** Measuring a serial position curve 167
  - Serial position curve 167
  - Coding in short-term and long-term memory 168
  - Locating memory in the brain 171
- TEST YOURSELF 6.1** 174
- Episodic and semantic memory 174
  - Distinctions between episodic and semantic memory 175
  - Interactions between episodic and semantic memory 178
  - What happens to episodic and semantic memories as time passes? 180
- Method:** Remember/know procedure 180
- Research box 6.1:** Does the internet weaken our memory? 182
- TEST YOURSELF 6.2** 184

- Procedural memory, priming and conditioning 184
  - Procedural memory 184
  - Priming 186

- Method:** Avoiding explicit remembering in a priming experiment 187
  - Classical conditioning 188
- Something to consider 188
  - Imagining the future 188
- TEST YOURSELF 6.3** 189
- Chapter summary 190
- Think about it 191
- Key terms 191
- CogLab experiments 191

## CHAPTER 7

### Long-Term Memory: Encoding, Retrieval and Consolidation 192

- Encoding: Getting information into long-term memory 194
  - Levels of processing theory 194
  - Forming visual images 195
  - Linking words to yourself 196
  - Generating information 197
  - Organizing information 198
  - Retrieval practice 199
- Research box 7.1:** Drawing as an effective encoding technique 200
- TEST YOURSELF 7.1** 201
- Retrieval: Getting information out of memory 201
  - Retrieval cues 202
- Method:** Cued recall 202
  - Matching conditions of encoding and retrieval 203
- TEST YOURSELF 7.2** 207
- Consolidation: The life history of memories 208
  - Synaptic consolidation: Experience causes changes at the synapse 209
  - Systems consolidation: The hippocampus and the cortex 210
  - Consolidation and sleep: Enhancing memory 214
- Research box 7.2:** Sleep selectively supports memories that are relevant for future use 215
  - Updating memories: Retrieval and reconsolidation 217

- Something to consider 221
  - Effective studying 221
- TEST YOURSELF 7.3** 223
- Chapter summary 224
- Think about it 224
- Key terms 225
- CogLab experiments 225

## CHAPTER 8

### Everyday Memory and Memory

#### Errors 226

Autobiographical memory: What has happened in my life 228

The multidimensional nature of autobiographical memory 228

Memory over the life span 229

Memory for “exceptional” events 232

Memory and emotion 232

Flashbulb memories 234

**Method:** Repeated recall 236

**TEST YOURSELF 8.1** 240

The constructive nature of memory 240

Bartlett’s “War of the Ghosts” experiment 240

Source monitoring and source monitoring errors 242

**Research box 8.1:** Who said what, and can I trust it? 244

How real-world knowledge affects memory 245

**TEST YOURSELF 8.2** 248

Memory can be modified or created by suggestion 249

The misinformation effect 249

**Method:** Presenting misleading post-event information 249

Creating false memories for early events in people’s lives 251

Why do people make errors in eyewitness testimony? 252

Errors of eyewitness identification 253

Errors associated with perception and attention 253

Missed information due to inattentional blindness 254

Misidentifications due to familiarity 255

Errors due to suggestion 256

What is being done? 258

Something to consider 259

Why do we have such a flawed memory system? 259

Retrieval induced forgetting 260

**TEST YOURSELF 8.3** 262

Chapter summary 262

Think about it 264

Key terms 264

CogLab experiments 264

## CHAPTER 9

### Knowledge 265

How are objects placed into categories? 268

Why definitions don’t work for categories 268

The prototype approach: Finding the average case 269

**Method:** Sentence verification technique 272

The exemplar approach: Thinking about examples 274

Which approach works better: Prototypes or exemplars? 275

An alternative view on typicality based on ideals 275

Is there a psychologically “privileged” level of categories? 277

What’s special about basic level categories? 277

How knowledge can affect categorization 279

**Research box 9.1:** We are all face recognition experts! 280

**TEST YOURSELF 9.1** 281

Representing relationships between categories:

Semantic networks 282

Introduction to semantic networks: Collins and Quillian’s hierarchical model 282

**Method:** Lexical decision task 285

Criticism of the Collins and Quillian model 285

Representing concepts in networks:

The connectionist approach 286

What is a connectionist model? 287

How are concepts represented in a connectionist network? 288

The representation of concepts in the brain 291

The sensory-functional hypothesis 291

The semantic category approach 293

The multiple-factor approach 293

The embodied approach 295

- Sorting out the approaches 297
- Something to consider 297
- The hub and spoke model 297

### TEST YOURSELF 9.2 299

Chapter summary 299

Think about it 300

Key terms 301

CogLab experiments 301

## CHAPTER 10

### Visual Imagery 302

Imagery in the history of psychology 305

Early ideas about imagery 305

Imagery and the cognitive revolution 305

Imagery and perception: Do they share the same mechanisms? 306

Kosslyn's early mental scanning experiments 306

**Method/Demonstration:** Mental scanning 307

The imagery debate: Is imagery spatial or propositional? 308

Behavioural experiments: Comparing imagery and perception 310

How can the imagery debate be resolved? 313

### TEST YOURSELF 10.1 313

Imagery and the brain 313

Imagery neurons in the brain 313

fMRI research 314

Transcranial magnetic stimulation 317

Neuropsychological case studies 319

Conclusions from the imagery debate 322

The role of gaze in mental imagery 323

**Method:** Eye tracking 324

Eye movements during recollection 324

**Research box 10.1:** The functional role of eye movements in memory retrieval 325

Eye movement hotspots 327

Something to consider 328

Visual imagery and emotion 328

### TEST YOURSELF 10.2 330

Chapter summary 330

Think about it 331

Key terms 331

CogLab experiments 331

## CHAPTER 11

### Language 332

What is language? 333

The creativity of human language 334

The universal need to communicate with language 334

Studying language 335

Perceiving phonemes, words and letters 336

Components of words 337

How perceiving sounds and letters is affected by meaning 337

**Method:** Demonstrating the word superiority effect 339

Understanding words 340

The word frequency effect 340

**Method:** Eye movements in reading 341

Lexical ambiguity 342

### TEST YOURSELF 11.1 344

Understanding sentences 345

Semantics and syntax 345

**Method:** Event-related potentials and language 346

Understanding sentences: Parsing 347

The syntax-first approach to parsing 348

The interactionist approach to parsing 349

### TEST YOURSELF 11.2 355

Understanding text and stories 355

Making inferences 356

Situation models 357

**Research box 11.1:** Discourse context and world knowledge interact in online sentence comprehension 359

Producing language: Conversations 361

Taking the other person into account 361

Syntactic coordination 364

**Method:** Syntactic priming 364

Something to consider 366

Culture, language and cognition 366

### TEST YOURSELF 11.3 369

Chapter summary 370

Think about it 371

Key terms 371

CogLab experiments 371

**CHAPTER 12**

**Problem Solving** 372

- What is a problem? 374
- The Gestalt approach: Problem solving as representation and restructuring 374
  - Representing a problem in the mind 374
  - Restructuring and insight 375
- Research box 12.1:** "Aha," so this is how it works! 378
  - Obstacles to problem solving 379
- The information-processing approach: Problem solving as a search process 383
  - Newell and Simon's approach 383
  - The importance of how a problem is stated 388

**Method:** Think-aloud protocol 389

**TEST YOURSELF 12.1** 390

- Using analogies to solve problems 390
  - Analogical transfer 391
  - Analogical problem solving and the Duncker radiation problem 391
  - Analogical encoding 395
  - Analogy in the real world 397
- Method:** In vivo problem-solving research 397
- How experts solve problems 398
  - Differences between how experts and novices solve problems 398
  - Expertise is only an advantage in the expert's speciality 400

- Creative problem solving 400
  - What is creativity? 401
  - Practical creativity 401
  - Generating ideas 403
  - Effects of mood and physical exercise 405
- Something to consider 407
  - Creativity, mental illness and the open mind 407

**TEST YOURSELF 12.2** 409

- Chapter summary 409
- Think about it 410
- Key terms 410

**CHAPTER 13**

**Judgment, Reasoning and Decisions** 412

- Making judgments 413

- The nature of inductive reasoning 413
- The availability heuristic 415
- The representativeness heuristic 417
- Preconceptions, attitudes and judgment 420

**TEST YOURSELF 13.1** 422

- Deductive reasoning: Syllogisms and logic 422
  - Validity and truth in syllogisms 423
  - Mental models of deductive reasoning 425
  - Conditional syllogisms 427
  - Conditional reasoning: The Wason four-card problem 429
    - What real-world versions of the Wason task tell us 430
    - An evolutionary approach to the four-card problem 432
    - What has the Wason four-card problem taught us? 433

**TEST YOURSELF 13.2** 433

- Decision making: Choosing among alternatives 434
  - The utility approach to decisions 434
  - How emotions affect decisions 437

**Research box 13.1:** The financial costs of sadness 441

- Decisions can depend on the context within which they are made 442
- Decisions can depend on how choices are presented 443
- Neuroeconomics: The neural basis of decision making 445

- Something to consider 446
  - The dual systems approach to thinking 446

Postscript: Donders returns 449

**TEST YOURSELF 13.3** 449

- Chapter summary 450
- Think about it 451
- Key terms 451
- CogLab experiments 452
