

# Contents

1. Introduction: social context
2. Energy balance of buildings
3. Challenges for building physics
  - 3.1 Irregularities in building envelopes
  - 3.2 Thermal transmittance in 3D
  - 3.3 Overall air-permeability
  - 3.4 Long-wave radiation
4. Building-energy concepts in the design procedure
5. Integration of renewable energy systems
6. Examples
  - 6.1 Two low-energy family houses
  - 6.2 Building as a learning instrument
  - 6.3 Building integrated photovoltaic installation for research and education
7. Conclusion
